RACES isn't allowed to function (except for limited practice sessions) unless specifically activated and called to action by the government. The FCC isn't even granting any more RACES station authorizations. They really are not a public service group but instead are a volunteer civilian auxiliary to the government. Thus RACES cannot do anything other than follow the specific orders of the government when specifically activated. They cannot do walk-a-thons or any other volunteer work or public service work.

On the other hand, ARES is totally independent of the government and is strictly an organization set up by and run by hams. The hams themselves decide if, when and where they will do public service. ARES is not even mentioned in the FCC rules. They can do any public service they want to so long as they do not violate the FCC rules. The FCC has nothing whatsoever to do with ARES.

I repeat the words in 97.1a amount only to a recognition of the fact that we do public service and encouragement to us to continue. It is not an authorization to do public service. We need no authorization whatsoever to do public service. Amateur radio operators have always participated in public service and have done so since before those words were incorporated into the FCC rules. There is NO mandate. There is NO authorization.

But that is not the context in which you used it. There is nothing in Part
97 authorizing us to do public service. Public service is briefly mentioned
but only in recognition and encouragement. Paragraph 97.1a does not
authorize any one to do a thing.

So quote the exact words from Part 97 that give us an authorization to do
public service. There is none. So regarding the FCC rules you have misused
the term.

Absolutely. The rules say 365 days not 1 year. So if the dates would end
up crossing February in a leap year, the CSCE is good for one day less than
a year.

Actually it is quite easy to QSO someone without using their call sign.
Except when 3rd party traffic is involved, the FCC rules only require that
we give our own call on the air. We do not have to give the other
station's. For example in working a pileup, we throw in our call. The DX
station manages to pick it out of the mess, responds, and gives a report.
We repeat our call sign and give our report. Many times we do not say the
DX station's call just to keep things moving.

Dee,

The belief that a mandate for anateur radio to participate in public service communications is quite common - just did a quick search on Google, and II have attached an ARRL reference as well as one amateur radio club, who both clearly call it a "mandate".

Not sure where in the regs this is, or whether it is an interpretation of the Part 97 sections already quoted.

73, Leo

ARRL:

http://www2.arrl.org/qst/features-columns.html :

Public Service: Our mandate from the FCC includes the need to put our knowledge and equipment to use in service to our fellow citizens. Every month you'll read about what your fellow hams are doing to fulfill this promise of service to their communities.

Kentucky Amateur Radio Web Site - ARES Operator Registration

http://www.qsl.net/kyham/forms/aresreg.html

Thank you very much for having the desire to serve your community, and help to fulfill Amateur Radio's FCC mandate of public service in time of emergency.

These mistakes are quite common Leo and sometimes are fostered intentionally just to make a good show. This is why every ham should read Part 97 from beginning to end. The exact words in Part 97.1a are as follows (and this is the only place public service is even mentioned.

97.1a
"Recognition and enhancement of the value of the amateur radio service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications."

This wording certainly is no mandate or authorization. It's a recognition of what we do and what we have always done. While public service is indeed a time honored and honorable tradition and something that we should continue to do, the FCC regs can hardly be construed to be either a mandate or an authorization.

However, political grandstanding for selling your cause is also a long and time honored tradition. I don't really agree with such actions (even on the part of the ARRL) but calling a house a castle doesn't make it one.

Dee,

Agreed, the paragraph that you quote simply recognizes the value of public service comms, no mandate or authorization is expressed or implied.

I'm surprised, though, that an organization as large as the ARRL would carry such a statement on their site without something to back it up - an error, perhaps, or they found a lost FCC scroll, or ?

Has anyone emailed them to inquire just exactly where they got this mandate idea from? I'm a ARRL member, and would be willing to do so if you wish!

No problem. Anyway just to continue, there are other occasions that people don't give both call signs. Take a net for example. The individuals in the net may end up never stating the net control's call sign. For example, I might finish my turn and say "Back to net control, this is N8UZE". It varies depending on the customs of that particular net. However, in a rag chew, it would be difficult to completely avoid the other station's call sign. You will probably say it at least once just to insure that you have it correct.

I find the constant repetition of both call signs that some people do a bit irritating actually. Once I've established the contact in case of a rag chew, I simply use the person's name and then give my own ID as required under the 10 minute rule. If I've got someone longwinded or am working CW, I'll give mine each time I turn it over to them just in case they run long enough that I might not make the 10 minute ID.

Oh I wouldn't get too excited about it. Remember that among its other functions, ARRL is a political entity. Political entities do use and abuse the language. However note that even though the term is used on the website, the study guides do not refer to public service as a mandate.

I think I still don't see that anyone wants to see you depart from your "standards," Jim. I saw people suggesting different ways in which you could still support your "standards" and be a whole lot more diplomatic about it. Diplomacy is a choice, though, that you apparently do not wish to make. I don't like diplomacy, either.

Metaphysically and philosophically speaking, for each and every action,
there is an equal and opposite reaction. It is not so metaphysical or
philosophical, though, that evidence of the statement cannot be found.

>
> Sometimes actions are ignored.
>

And, for that, there will be a reaction--somewhere, sometime, there will be
a reaction. That reaction will be of equal and opposite significance.

>

And, equally, I say if there is anything sexual about my callsign, that's in
your mind and in the mind of others. I simply have it because I have big
tits. Ask N5BIG why he has that callsign. He's a friend, tell 'im I sent
ya.

Yeah, but I was awake, asleep, awake, asleep. It just wasn't my kind of
movie. Master and Commander was pretty darned good, but rushed, in my
opinion. That movie had a lot of potential that never got released. Oh,
but I am terrible at retaining phrases, etc.

You guys are engaged in picking flyshit out of the pepper pot. Since 97.1 is headlined "Basis and Purpose", we can pretty much accept that 97.1(a) is the equivalent of a direct order.

Putting it another way, if ARRL BoD at their meeting this weekend passes a resolution that the FCC has not authorized us to public service communications, and therefore hams are no longer mandated to provide it, our continued use of the spectrum would come to a quick end.

Here we have a very interesting point to examine.

IF Jim finds that Kim's callsign, which *was* and *is* a double entendre; an objectionable thing, (google it up folks - it's there)

AND Jim finds some language that she used objectionable,

AND Jim types "[expletive deleted]" instead of the word he finds objectionable. in replies to her,

IS NOT Jim showing the same disrespect for Kim in this case as he shows for Kim in his posts where he does not type her callsign?

Therefore IT FOLLOWS that Jim MUST *always* make *full* attributes to Kim exactly as she typed her post, with no deletions to content that he finds objectionable.

Any less would be disrepectful.

Good luck with this one.

- Mike KB3EIA -

Some would say that's mostly what he did. He was very very "annoying", saying
that India should be independent, that Hindus and Moslems could live together,
making salt when it was against the law....

Very annoying fellow at times.

Nope. That's a Heath HW-2036. Only has one meter - analog.

But my shack clock is digital. It's a Tymeter 24-hour one, made from
the parts of three junkers more than 15 years ago.

How can you sit there and say that, Dee? Again, if you're going to do public service with a Ham radio, you're only allowed to do public service which is authorized. You may not do it for profit. You may not do it for a for-profit business or organization unless it serves the public only, not the for-profit entity. You may not do it for a non-profit entity if it can be used for profit (status reports for a walk-a-thon, for example). You may do it only on the frequencies authorized. And so on. There are rules across the board as to what is and isn't authorized.

Okay, lets try a different tact, Dee. If you use your radio for public service, what types of public service are you authorized to do? What frequencies are you authorized to use? What types of transmissions are you authorized to make? What messages are you authorized to transmit? Are you honestly going to say nothing to each of these questions?

No, the real problem is that some simply don't understand the full meaning of the word "mandate." They feel there is some kind of requirement behind it. So, of course, they get confused when it is used in a non-required context. However, there is no requirements associated associated with the other senses of the word. For example, the president can be given a mandate by the voters to lower taxes, but there is no requirement to do so. Amateur Radio operators have a mandate to perform public service (it's in the basis and purpose of this radio service), but there is no requirement to do so.

I give up, Dee. You simply cannot get past the word "required." Again, there is no "required" associated with "mandate" or "authorization" in the sense used.

> You have just demonstrated how little
> you know about ARES and RACES.

I've said nothing in the message you replied to about ARES or RACES other than "the FCC has set rules on what is and isn't authorized in that situation." Please explain how that demonstrates how little I know about them?

So, because Kim did something, it gave Jim the right to do something?
Isn't that a two wrongs don't make a right situation, Dave?

Regardless, lets get to the basics of this issue. What is wrong with the word "tit?" My dictionary defines it as a noun meaning "either of two soft fleshy milk-secreting glandular organs on the chest of a woman." Seem rather innocuous to me. I assume Kim, like most women, has those "soft fleshy milk-secreting glandular organs." So why would so many be offended by her very mention of that fact? It's not like she's refering to the sexual organs or something.

> It might say something about their

We only have what we do by the grace on the FCC and Congress. There is
no part of part 95 or 97 that is a congress passed law only a rule set
up by the FCC. We only have what we do because of the possibility that
we may perform a public service. Hans is correct. No public service
equals no amateur radio. Most public service today could be carried
using Nextel or some other cell. Most PS is auto traffic or weather
and could easily be done that way.

Jim, your debating style seems to be based almost entirely upon diversion, circular logic, word games, smokescreening and sidestepping of the main issue under discussion. I expected better from the man who often speaks of principles and high standards of conduct in his posts.

The issue, as you are quite well aware, is your singling out of Kim in a list. And not creating a level playing field out of courtesy to her. Period. An issue which has been carefully avoided in all of your responses so far.

Are you unable or unwilling to face up to this single issue? - or shall we all continue merrily down the garden path with you? You are fooling no one but yourself, Jim.

"It has always been a peculiarity of the human race that it keeps two sets of morals in stock-the private and the real, and the public and the artificial." - Mark Twain

Source record: 85685

Dwight,

I did some digging on this, and I believe that you are absolutely correct - a mandate is an authorization or an approval.

In fact, the word "mandate" can be used to mean either a mandatory requirement or an authorization. The dictionary defines "mandate" as:

http://www.yourdictionary.com/ahd/m/m0073800.html
http://dictionary.reference.com/search?q=mandate

1. An authoritative command or instruction.

2. A command or an authorization given by a political electorate to its representative.

http://www.m-w.com/cgi-bin/dictionary

1. an authoritative command; especially : a formal order from a superior court or official to an inferior one

2 : an authorization to act given to a representative <accepted the mandate of the people>

Meaning #2, "authorization", would fit the wording and intent of the regs quite well.

Cross referencing to the Thesaurus, we find the following synonyms listed for the word "mandate":

http://thesaurus.reference.com/search?q=mandate

Entry: mandate
Function: noun
Definition: authority
Synonyms: authorization, behest, bidding, blank check, carte blanche, charge, command, commission, decree, dictate, directive, edict, fiat, go-ahead, green light, imperative, injunction, instruction, order, precept, sanction, warrant, word
Concept: authorization
Source: Roget's Interactive Thesaurus, First Edition (v 1.0.0)
Copyright ï¿½ 2004 by Lexico Publishing Group, LLC. All rights reserved.

Entry: approval
Function: noun
Definition: authorization
Synonyms: acquiescence, assent, bells, blessing, compliance, concurrence, confirmation, consent, countenance, endorsement, finest

kind, go-ahead, green light, leave, license, mandate, ok, OK,
permission, ratification, recommendation, sanction, support, the nod,
validation
Antonyms: denial, disapproval, refusal, rejection
Concept: authorization

Note that both dictionary definitions are represented in the list, but
that the root concept of the word is "authorization". "Mandate is
also listed as a synonym for the word "approval"

The word "mandated" , however, is much clearer - it means "to makes
something mandatory", period.. Mandate, however, is not necessarily an
imperative. These similarity between these two words (and their
interchangeable usage in common speech) may be the source of the
confusion here.

Based on these references, the reference to authorization in the regs
could well be interpreted as a mandate, using the dictionary
definition #2 from both sources, and confirmed by the thesaurus.

But Kim, I was also going to point out that by eliminating the
attributes as you did, you were also making changes to the existing body
of the message!

Yeah, I know you made your point. But my point is to those who insist
that Jim must post a certain way. He can omit your callsign just the
same as you can make a post without the correct attributes to make you
point. And you did a pretty good job, witness this thread.

I just applied their logic to the message at hand.

HOWL!!!!! Looks like the thread is not dead after all, Leo! 8^). It has just mutated into another version of the never-ending debate of Kim's callsign.

So I think that we can come to the inescapable conclusion that if Ham radio was invented today, it would consist mostly of debating the relative merits of the callsign W5TIT.

So be it.

An order to the entire ARS, not to individual amateurs. Of course, if
no
individual amateurs do what 97.1(a) says, the ARS doesn't do it
either.

And a service which doesn't at least fulfill its B&P loses its reason
to exist.
>
> Putting it another way, if ARRL BoD at their meeting this weekend passes

Fortunately, that won't ever happen.

But the following might:

Last evening I had the pleasure and honor of attending a meeting
of a large and well-known radio club. The meeting was well
attended due to the excellent program presented by Ed Hare, W1RFI,
on BPL.

In both simulation and actual measurements, BPL systems cause
interference levels that make any affected band virtually
useless for communication for amateurs and others near such systems.
Depending on the vagaries of HF propagation, amateurs and others
may experience harmful interference from systems that are not
nearby.

ARRL is doing all it can to fight the BPL threat, but there is no
guarantee they will be successful. The BPL companies are promising
inexpensive broadband access, new jobs, competition, new technology,
and all the other electropolitically and econopolitically correct
terms folks like to hear.

If this sounds like I'm stumping for support for ARRL and the fight
against BPL, yer dern right. Because if BPL gets implemented on
any sort of wide scale, issues like license tests or the
appropriateness of certain callsigns will be academic.

What does all this have to do with public service? Simple: The ARS' right to exist is seriously threatened by BPL. The companies pushing it say there are millions of people just begging for the service, more jobs, etc.. And many of the systems work within *existing* Part 15 radiated emission limits.

So in some ways it comes down to 'which is more important - this newbroadband technology or ham radio?' Do you want to defend the existence of amateur
radio based purely on it being "a fun hobby" with no reference to public
service? If it comes down to that, we'll lose. Big time.

Some might say "BPL isn't my problem; I don't work those bands". Trouble
is, you may have to deal with BPL harmonics. And a precedent that it's OK for an unlicensed unintentional radiator to wipe out hams on HF and low VHF sets
up a very grim future for any ham band.

Hans is right - take away the public service aspect, and the ARS' reason
to exist is radically reduced, if not totally eliminated. Which may be exactly why some nonhams find it necessary to deny that amateur radio provides any public service, and to describe amateur radio as purely "a fun hobby".

I fully support the fight against BPL, and suggest that everyone send
support to ARRL either through their clubs or personally.

I do however think that while we must remain vigilant, that BPL will
end up on the trash heap of technology. We need to avoid the near panic
that came out when the abomination was first proposed.

Too many powerful interests are aligning in opposition to it. ARRL,
FEMA, and I believe a Broadcaster's association. The FCC has now
"clarified their "broadband Nirvana" statements.

Austria terminating a BPL test after the pilot project provided
free major interference with A Red Cross Emergency drill adds fuel to the
BPL pyre. This was even after they were considering such fixes as a
buffer zone around amateurs houses.

Finally, it is obvious that the technology DOES NOT WORK! The apparent need to increase power levels, the fact that a HF radio would have to operate on QRP levels to not shut down a BPL signal, and that normal levels of HF signals have been able to shut down BPL over a surprisingly large range.

And before we take a ARS-centric view of the whole thing, remember that there are plenty of other users of HF beside us.

Soooooo, if the rules are changed so that BPL gets priority use of the HF spectrum, reversing the radio universe in that part 15 devices will tolerate no interference from other devices, and that the other devices are forced to tolerate interference from the part 15 device, and *every* other user of the HF spectrum is forced off the air, then maybe, just maybe, BPL will work....kinda.

The FCC does not authorize any particular form of public service that we do. By the way whether or not ham radio is involved, public service is by definition not for profit. If it is for profit, it's not public service. I can do public service anytime I want to using ham radio. The club I belong happens to focus especially on public service. We do the diabetes walk-a-thons, the MS walk-a-thons and a plethora of others. I do not need the FCC's authorization or permission to do so. I don't even have to be a member of a club. I can do public service as an individual if I so choose. Nowhere does the FCC state what public service I may or may not do using ham radio. I can use any ham radio frequency that I am licensed for. There are no special frequencies set aside for public service.

The not for profit clause (and it's exceptions) applies to all ham radio activities and are not specific to public service.

The frequency privileges/restrictions are apply to all ham radio actitivies and are not specific to public service.

The FCC regulations in Part 97 apply to all ham radio activities and are not specific to public service.

I can do any public service that I choose to do. I can use any frequencies that I'm authorized to do. I can make any type of non-profit communications. I can transmit any type of non-profit messages. These rules apply to all ham radio activities. There are no special requirements that apply to public service that are any different than the ham rules.

I am authorized to operate as an amateur radio operator. That is all that is needed. How or if I perform public service is entirely up to me.

And you seem to be unaware of the political fluff that is tossed around by
politicians and lobbyists to "prove" their point. You've got to read the
rules for any activity. The FCC rules give no mandate or authorization or
assignment of public service to the ham operator.

And I pointed out that Part 97 does not mention ARES at all and that RACES
is a very limited and specialized activity and is really the field of
general public service.

While it is true that public service is one of the stronger justifications
for hams being allocated frequencies, it is not the only justification. And
a justification for our existence is not the same as having a mandate or
authorization to do public service. It is entirely up to the ham community
as to how diligently we want to pursue public service and how strong we want
this justification to do. Remember it is only ONE of several
justifications. Perhaps we need to focus on some of the others. It looks
to me like we are falling very short in the technical development area for

example.

Except that the FCC rules do not grant any authority in anyway to do public service nor do they establish any requirement to do public service. In any sense of the word mandate, there is none in the FCC Part 97.

The regs have no reference to authorization in them. So the usage of mandate
is still incorrect.

I strongly support public service. Yet the Basis and Purpose statement speaks of encouragement and enhancement of what we already do. It is not granting us any special authorization or mandate to do what we already do.

>
>[snip] Hans is right - take away the public service aspect, and the ARS'

I have many times in many forums objected to the phrase "it's just a hobby" for this very reason. I strongly believe in public service. I strongly believe that it is one of, but not the only, justification for our existence. However if we are going to put so much emphasis on this particular element we have to face the fact that we are very remiss addressing the other elements listed under Basis and Purpose. But again a justification to exist is neither a requirement nor an authorization.

Jim has every "right" not to use Kim's callsign whether she does
something or not. Kim has no power to force him to use her callsign or
make him give approval to her choice.

> or something.

Thanks for the detailed definition, Dwight. The term is vulgar slang
and you have, I'm sure, seen Kim's most recent explanation for having
chosen her call. Kim's choice is simply another of her several ways of
thumbing her nose at the world. Maybe you're the kind of fellow who
would be proud to have his wife, mother or daughter choose a similar
call. I'm not.

No, Dwight. I'm comparing tasteless and tacky with tasteless and tacky.

Actually, you still don't understand what you did. Jim did not change
what you wrote. His actions/comments were clearly his. You changed an
attribution. Jim did not.

No, he hasn't. I presented you with two illustrative example of what
you did. Jim did not do the same as you did at all.

> But, to me, I got my point
> across and the posts get too long to continue the discussion ;)

It's hard for you to get your "point" across when you still don't
understand what you did.

What game are we playing which requires a level field? Kim wasn't being courteous to others in her choice of callsign. Perhaps you'll want to take her to task over it. She singled herself out in her choice of calls.
Now she has to live with the fallout. Some will give her a *wink* or a *chuckle*. Some will voice their disapproval.

> Are you unable or unwilling to face up to this single issue? - or

So we're to believe that your private, real morals are better than those you've exhibited here. It seems that you've set yourself up here to defend bad taste.

I'm getting confoozed! Your two meter rig is a one meter rig?

I remember the '2036 and used to own one. I spent a lot of time
fiddling with those VCO coils in the thing. It belongs to a Lebanese
ham in Sierra Leone now. He's probably cursing me every time he has to
fiddle with those coils.

I don't recall anyone saying anything about your call being "sexual". I
remember "tasteless", "tacky" and "inappropriate" being used. I recall
seeing the word "vulgar". Your latest reason for choosing your call
pretty much says it all.

> > > As I said, you've been changing my original posts for over a year now

I have no problem living with it, Kim. After all, it was a factual
account of what took place. I even provided two very good illustrations
for your benefit. As to the reality that you still don't seem to get
it, I can live with that too.

She deserves? On what basis? If Kim believes that I am discriminating against her because I disapprove of her callsign, she's right. If it annoys her--well, I find Kim's callsign to be inappropriate. She should stop annoying me.

> Wouldn't it?
> You bet.

I see you already have an answer for your question so I needn't weigh in.

You know, "Leo", Kim's choice of calls wasn't a very courteous thing to do, was it? Kim doesn't seem bothered by her lack of decorum. I'm not going to let the fact that she's honked over her call not being written by someone cause me a lack of sleep.

> Not the required thing, Dave - the courteous thing. Considerate, even
> - like the Amateur's Code says:

Kim wasn't being considerate of the views of others in choosing that particular call, was she?

> "CONSIDERATE...never knowingly operates in such a way as to lessen the
> pleasure of others."

I have news for you, "Leo". I'm living up to that line from the Amateur's Code. I'm not operating in such a way as to lessen the pleasure of others. Right now, I'm not operating at all. I'm posting in Usenet.

> Personally, I don't suffer from some Freudian thing that causes me to
> find call signs offensive. People can be offfensive, but not call
> signs - it's just a license number, Dave......

Actually, I have only one number in my call. The rest are letters. I have had a couple of calls which had two digits. I've never referred to any past or present calls as license numbers.

>that came out when the abomination was first proposed.

Maybe it will be trashed - but maybe not. It's not over till it's over, and even then it's not over. For example, even though Japan rejected BPL after trials, the BPL companies there are trying again, claiming "new technology".

And remember that the levels of interference at the various test sites conform to existing FCC radiated levels!
>
> Too many powerful interests are aligning in opposition to it. ARRL,
>FEMA, and I believe a Broadcaster's association. The FCC has now
>"clarified their "broadband Nirvana" statements.

Could still happen. Most of those folks don't have installations in residential neighborhoods. Most hams, OTOH...

> Austria terminating a BPL test after the pilot project provided
>free major interference with A Red Cross Emergency drill adds fuel to the
>BPL pyre. This was even after they were considering such fixes as a

We're not in Austria. The EUs usually are a lot more rejecting of pollution than we are. (BPL's interference is essentially spectrum pollution, wouldn't you agree?)
>
> Finally, it is obvious that the technology DOES NOT WORK!

No, it *does* work! The demo sites are functioning.

>The apparent
>need to increase power levels, the fact that a HF radio would have to
>operate on QRP levels to not shut down a BPL signal, and that normal
>levels of HF signals have been able to shut down BPL over a surprisingly

In some test sites. But at others, it's a different story. And even such problems are no guarantee that FCC won't allow it.

Look at Manassas.

> And before we take a ARS-centric view of the whole thing, remember
> that there are plenty of other users of HF beside us.

Sure - and hopefully the combined effect of all of them will be enough to convince FCC.

But the job isn't done till it's done.

>
> Soooooo, if the rules are changed so that BPL gets priority use of the

>are forced to tolerate interference from the part 15 device, and *every*
>other user of the HF spectrum is forced off the air, then maybe, just
>maybe, BPL will work....kinda.

Stranger things have happened.

Suppose you sit down for a nice bit of PSK and find the waterfall full of noise - and no signals visible. Do you think the power company is going to interrupt service so you can operate?

Or suppose you see a signal or two and open up with 100 W. And suppose you dump the system for a radius of a mile from your house....

Or suppose the local gendarmes show up, responding to complaints from many angry citizens that *you* are messing up *their* computers. Do you want to explain Part 15 and Part 97 to them, when they see you as the electronic equivalent of somebody violating the peace?

Or suppose any time someone calls the help line, the first question the help person asks is "Is there a ham radio within a mile of your house?"

These are not wild scenarios. They're updates of what used to happen when TV first came to some areas. Years ago, one ham, W4GJO, was *sued* for TVI by a nearby bar owner who couldn't get distant TV stations when 'GJO was on the air. FCC's attitude, and statements, were that the ham's rig was clean and so it was the TV owner's problem. Yes, the ham eventually won, but it took many hours and dollars.

None of this means we should panic or over react. But neithr can we think the problem is licked or that it will go away on its own.

It ain't over till...

ROFLMAO!! Know what it sounds like to me? Sounds like Dave has an agenda. The dialogue on this thread that has just been winding down the past couple of days has less to do with my callsign than it did with overall practices in newsgroups.

Yet, Dave persists in defending the topic from the angle of it having had more to do with my callsign! He's managing to achieve nothing but tripping over his own self.

And, you're still pontificating, Dave. How many times have I clearly stated: I know what I did, I know what I did trumped what Jim did (i.e., had greater impact on everyone), and I'll state now I don't think I'd change a thing about doing it--three ways--again!

To me, attributes, or deleting things such as signatures and things from tracking mechanisms, are equal. Got it? No difference in either action to be determined as "wrong." Each is an insult, each is astray from standard conventions of newsgroup submissions, and each have the same potential to mislead, or at least misdirect, the readers of that post.

> > >
> > > IS NOT Jim showing the same disrespect for Kim in this case as he
shows

I don't think the justification for the action needs to be included in the dialogue. As I stated in another post, regardless of reason, *both* are wrong. I refuse to continue to get wrapped up in this being about my callsign--it is not.

>as each stands on its own.

My idea was not to create separate elements but to change the marking system slightly.

Each question in the pool would be classified by certain subjects - rules and regs, safety, theory, etc. Probably only 4 subjects, not the 10 or so we had before. Rules and regs are one obvious subject, safety another, operating procedures, and theory. And each test would contain a certain number from each subject.

The difference would be that in order to pass you'd need a certain number in each subject correct, not just the total. So even though there might not be that many safety questions on a test, you could not get them all wrong or most of them wrong and still pass.

But it would only be one test and one element.

>
>I think Kim owes amateur radio a little common courtesy. Don't you?

My point (again...) was that the callsign itself cannot possibly be
"objectionable" - it's a callsign. If dirty thoughts enter your own
mind whever you see it, that ain't Kim's problem.

If Kim chooses to use her call in an objectionable manner, that would
be a different issue. Please feel free to start your own thread if
you wish to debate this point.

>particular call, was she?

I don't know, Dave. She picked a callsign, and the FCC granted it to
her. Was that inconsiderate somehow?

If she uses it in an incosiderate way, it would be. But that's not
what began this discussion. In this case, it was stated that the
callsign is "inappropriate". Which, by itself, it is not. It's
just a callsign, Dave.
>
>> "CONSIDERATE...never knowingly operates in such a way as to lessen the

You mean you consider it appropriate for an amateur to behave
inconsiderately or in an unfriendly manner when so long as he/she is
not on the air? Interesting concept.....

That must be one of those 'flexible' standards, huh?
>

Yep. Or how to make nice looking dials, labels, meter scales, etc.

One ham I know has made a schematic drawing utility based on MS Paint.
The various components are essentially clipart, as I understand it.
>

So would some others, including at least one who's not even a ham. So what?

One of my articles was June, 1994, IIRC.

>
>Those things are developing some nostalgia value these days.
>
In some ways clock technology has gone backwards. I remember when almost all
clocks ran on synchronous motors, like my Tymeter. The power co. kept track of
the Hz and would keep the total number of cycles-per-year pretty dern accurate.
I found that all my motor-clocks would stay in step with WWV give or take a
second or to for as long as the power was on.

Then came "digital quartz technology" - and no two clocks read alike. Set them all to the same time and in a few months they're all over the place. The newer computers actually seem to keep worse time than the older ones...

But my Tymeter grinds on, flipping the drums.

> How could you be sure of that, Brian?

I can be sure of that because of three of your postings.

1. You posted saying that you worked French amateurs where they have
no 6M authorizations.

2. You later stated that you would continue to do so because you have
no responsibility for where bootleg French hams want to operate.

And 3. You stated that you'd be happy to tune right by a legally
licensed American amateur because your're not required to respond.

That is how I can be sure.

Did you have a point about Kim's
> callsign?

Yes. It is legal and valid, but you show a preference for out of band
Frenchmen.

Is there anything else?

952. Dave prefers out of band Frenchmen!

However, the code test was abolished by the ITU way back on July 5th last
year. More than one year from _now_ would be more than eighteen months,
which doesn't seem likely to me, nor is that fast by any stretch.

I am down for May 1st in the pool, which is only about 10 months. That
maybe a little short, but I would be very surprised indeed if it went over
15 months, which would be this November.

As I said, you would like to think it would take longer, but that is because you don't want it to happen. Perhaps I have picked an earlier date because I take the opposite view, but I doubt if I am out by more than a few months.

Unfortunately, the Gutenberg press doesn't lend itself to the full
range of human vocal expression and we often infer emotion based upon
prior typed exchanges with our victims.

Mistakes in interpretation are made daily, yet are unambiguous when
the typist provides line after line of all CAPS, excessive exclamation
points (!!!), and multiple lines of
"bwhahahahahahahahahahahahahahahahahahahahahahahahahahaha
hahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahaha
hahahahahahahahahahahahahahahahaha" maniacal laughter.

"Bend Over" is another good clue that your on-line buddy has seen too
many reruns of Deliverance and wishes you ill will.

Similarly, you weren't being courteous to other Tanzanian amateurs by
working Frenchmen out of band on 6M when you held a Tanzanian call,
and subsequently stating that you would continue to do so because you
were within your authorization.

You give Tanzanian amateurs a bad name.

Meanwhile you state you would somehow manage to tune past a legally
issued American callsign, apparently in preference of out of band
Frenchmen on 6M.

So we're to believe that your private, real morals are better than
those
you've exhibited here and on the air?

It seems that you've set yourself up here and on the air to defend bad
taste.

D2, you are so incredibly wise. You immediately spotted and
understood the corruption in the N2EY/W5TIT exchanges, and knew to
stay away. You knew that Morse Code testing is healthy, wealhty, and
wise for the ARS, and must be retained under all circumstances. And
now you know the mind of the US government.

We are so incredibly lucky to have you post to RRAP. You are
practically a Shaman, and we hang on your every word as to the future
of the ARS. Thak you.

We are not worthy.

So? That in no way means that the U.S. Government (FCC) EVER HAS TO adopt a
completely code-free license structure at all. They could decide to keep
everything status-quo, despite what the U.S. amateur community wants.
```

What I say by this: That "it" could NEVER come.

> The term is vulgar slang (snip)

Vulgar is very much in the eyes of the beholder, dependant on how the word is used and who uses it. But I don't really see the word itself as vulgar, especially in an innocuous radio callsign. Would you be so offended if it had been issued by the FCC at random? Would you be so offended if it had been selected by a man? In the end, it appears to me that most are complaining simply because a woman selected a callsign which highlights a unique aspect of womanhood. Perhaps these guys are jealous that woman have those "soft fleshy milk-secreting glandular organs" and they don't. Tit envy?

> Maybe you're the kind of fellow who
> would be proud to have his wife, mother
> or daughter choose a similar call. I'm not.

I wouldn't even attempt to tell my wife, mother, or adult daughter, which callsign to select for themselves. All of these women clearly have enough intelligence to select the callsign they want, whatever it might be.

Wow. Thanks for looking, and typing, all that up for us, Leo. Words are always modified by the context of the discussion. In one case, a mandate is a command. In another, it's an approval, authorization, or so on. In the context used, knowing most here should know the FCC rules (or could look them up), the sense of that word should have been obvious.

Okay, now that you have accepted the authorization or approval sense of the word, and have acknowledged 97.1 and the regs relating to RACES, go back to my original statement you objected to - "there is nothing in Part 95 that mandates public service like that found in Part 97." Would you now agree there is nothing in Part 95 relating to public service that is like that found in Part 97?

Hmmmm, never thought of it that way, Leo, but your observation comes true.
I can't tell you how many times I have been given "oh jeeze" looks from
women who think I absolutely deliberately grew these things to their size!
I guess I've never paid that much attention to it; it's the equivalent of
"blaming" someone for being born any other way. :)

Y'know...the thing I think that fascinates me most in all this stuff is that, when I was asked about my callsign I could have just said, "none of your business." My callsign *could* have been chosen for any number of reasons: I bring light to the man over in Florida (K2TIT) who had that callsign as a commemoration to the TET offensive and, when he was considering a call, K2TET had been taken/issued (I don't remember which Michael told me).

Anyway, I openly and honestly told the story (yeah, Dave, the earlier and the later version) of how my callsign came to be and, *that* is what has determined the approach to my callsign--nothing more! *Not* the callsign.

So, the moral of this story is that, as long as one keeps quiet about their reasons for doing something, it must remain unquestionable to those in this newsgroup who now--simply because of a story and nothing more--find themselves high and mighty (over a--good grief--ham radio callsign!).

Oh wow, I just looked the K2TIT callsign up (to try and confirm that Michael was that guy's name, but I think it was)--and it's been two years since he's given it up! Hmmmm, now I could get my preferred callsign--I'd wanted the 'K' call, not 'W'. I actually believe that having a 'W' call is offensive to many long-licensed hams; much more offensive than having a suffix of any sort. ;)

Yup, people do have a natural tendency to get hung up on physical
characteristics. I've heard that from a couple of friends in the same
- um - situation...guys have trouble looking you in the eye, and the
other women (and some guys..) become insecure. Dumb and insensitive,
but it seems to be human nature.

You may want to suggest an experiment to those guys who do not
understand how this must feel. Ask them to place a large banana in
the inside front of their pants before they head off to work one
morning. Have them engage as many of their co-workers as possible in
conversation.

Then, the next day, have them go in (minus the banana :)) and see if
they can find anyone who remembers what the hell they were talking
about the day before......

That oughta learn 'em!

They are a sort of laboratory condition. If the test results from ARRL
are correct, 1 ham with 100 watts can effectively turn off the service
for quite some distance around him/her. That's what I mean.

> the system for a radius of a mile from your house....

Yup, keep on calling CQ. I probably wouldn't go above 50 watts tho' But even that would be enough to disrupt the BPL.

On a side note, has there been any tests on what solar storms would do to BPL?

> Or suppose the local gendarmes show up, responding to complaints from many
> angry citizens that *you* are messing up *their* computers. Do you want to
> explain Part 15 and Part 97 to them, when they see you as the electronic
> equivalent of somebody violating the peace?

> Or suppose any time someone calls the help line, the first question the
> help person asks is "Is there a ham radio within a mile of your house?"

Sure enough. All good arguments. And the best arguments for being steadfast in the fight against BPL. Even though I am certain that in practice, BPL will fall flat on it's face, that if approved, it will be a nuisance for some hams and others. But I see different levels of concern. Concern at a high level such as at the early part of the fight against BPL, when testing was needed, and arguments presented against BPL. The present situation, when it is being documented that the system is very fragile and has a track record of interference to emergency services (even if it is only a test) allows more leisurely prosecution of the problem. But prosecution has to go on.

What do you think the F.C.C's response will be when ARRL or FEMA trots out the Austrian BPL Red Cross interference data? Am I the only one that thinks that case is darn close to a show stopper?

So let me get this straight.

In order to display "gentlemanly conduct", you think I should
use Kim's callsign in my posts. Even though doing so violates
my standards. And even though it was chosen for reasons that
no gentleman would endorse.

Surreal.

> As you are aware.

I'm not aware of any ungentlemanly behavior on my part. I
am aware of some ungentlemanly behavior on the part of
others, though.

Nice attempt at diversion, Leo.

My standards are *exactly* the issue.

I'm being told, again and again, that my choice not to put Kim's
callsign in my posts is "wrong", and that my standards are of lesser
importance than Kim's feelings.

So let me ask the question straight out:

Which is more important: following my standards/judgement/conscience,
or Kim's feelings?

> >>You remember that, don't you, Jim?
> >>>
> >>>> Bully-like behaviour, Jim?

> >
> >Very annoying fellow at times.
>
> ...but totally unrelated to the issue.

No, totally related to the issue. He was very considerate of other people's
feelings. But that consideration did not keep him from being very very
"annoying" when his standards/values/conscience required it.

My standards require that I not put Kim's call in the list - because I
think it's inappropriate. I'm sorry if someone finds that annoying.
But I'm not going to change it.

> As you are aware.

I'm aware that I think Kim's callsign is inappropriate for the ARS.
I'm aware that I won't intentionally use it in a post.
I'm aware that others are trying to get me to change the previous
two statements.

> >>>> >So I quote Maximus in the arena, surrounded by those he has

Exactly the issue. Why do you avoid it?

> >>You know.
> >>
> >>But hey, you beat Kim, right!

> >Not according to Kim.
>
> According to you - read your own post!

Yes, according to me. Not according to Kim.

That's what I wrote.

As you are aware. ;-)

> >Kim thinks she "beat" me. I disagree.
> >

> "....Too bad you failed, Kim. But I hope you had fun."
>
> An interesting way to declare a draw, Jim.

Nobody is declaring a draw.

A draw is when neither side thinks they won, or can win, and so the game ends.

In this case, Kim thinks she won, and I think I won. Not a draw.
>
> >> That's all that matters.....
> >

> >Not at all. What matters is that I cannot be bullied into using a
> >callsign I think is inappropriate.
>
> Sidestepping the issue.

Yes, you are. Not me.

> >
> >Ever see the film "Demolition Man"? Think of Edgar Friendly.

> Jim, your debating style seems to be based almost entirely upon
> diversion, circular logic, word games, smokescreening and sidestepping
> of the main issue under discussion.

Leo, you are avoiding the central issue:

Which is more important: following my standards/judgement/conscience,
or Kim's feelings?

That's the central issue, right there.

> I expected better from the man who
> often speaks of principles and high standards of conduct in his posts.
>
> The issue, as you are quite well aware, is your singling out of Kim in
> a list.

You mean using her name instead of her callsign.

That was done because of my standards. Using her callsign in that list
was inconsistent with my standard that it's inappropriate. So I didn't
use it. As I have said before, no disrespect, insult, or singling out
were intended.

> And not creating a level playing field out of courtesy to
> her. Period.

You are saying that I should ignore my standards out of courtesy to Kim.
That having her callsign included in the list, rather than her name, is
more important than any consideration of *my* feelings or standards.

That's the issue.

> An issue which has been carefully avoided in all of your
> responses so far.
>
Not by me. By you and others.

Say it right out, Leo. Tell me that I should ignore/hide/deny my
standards of what is appropriate in deference to
"courtesy" and Kim's feelings.

> Are you unable or unwilling to face up to this single issue?

That's all I've been doing in these posts.

> - or
> shall we all continue merrily down the garden path with you? You are
> fooling no one but yourself, Jim.

How am I fooling myself?

I'm aware that I think Kim's callsign is inappropriate for the ARS.
I'm aware that I won't intentionally use it in a post.
I'm aware that others are trying to get me to change the previous
two statements.

Are you aware of what you are telling me to do?
>
> "It has always been a peculiarity of the human race that it keeps two
> sets of morals in stock-the private and the real, and the public and
> the artificial." - Mark Twain

Yup.

You want me to keep my standards private, and not act on them, because
they aren't the same as yours. Well, that's just not going to happen.

btw - if Kim's callsign is "just a license number", then why
not pick a different one? Why a vanity call at all?

All of you need to take a healthy dump and get a life. There is not a
single mention of policy in this entire thread.

Agreed...

FWIW I have been following this thread for a while, and have been very amused by it. Recently I downloaded a copy of the FCC amateur database to use in some club research, just for the heck of it, I did a few queries on the database tables...

There are a total of 8 hams who are proud of their TIT's, and another 42 who wear a BRA, there are no hams with the call of N0BRA (perhaps she is among the 50 who SAG).

There are a total of 11 hams who are an ASS and 37 FCK'rs, but no FUK'rs or FUC'rs. 9 are DUM, and a surprising 43 are full of SHT.

There are 47 NIT's to go along with the 56 WIT's.

The FCC has 72 hams, but has been getting careless with what they give calls to, as there are 54 DOGs, 78 CATs, 56 COWs, 25 PIGs, 87 FOXes, 51 GNU, 67 RATs, and an additional 56 with FUR. There are 63 hams living in the SEA, along with 51 EEL's and 60 COD.

A total of 47 hams LIE, while 43 are telling the TRUth.

Ham radio seems to be a family hobby as there are 68 DAD's, 73 MOM's, 45 who claim to be SIS, 38 BROs, 68 KIDs , and 57 BOYs.

There are 49 hams who like to YAK, while 54 each prefer PSK or FSK, an additional 70 are SSB users and 50 use a VOX. This greatly outnumbers the 65 who use a KEY and 67 BUG users.

Figuring out the genders of hams is a bit confusing, as there are 59 GUY's, 54 GAL's, 52 MEN, and another 36 MAN. This count also includes W0MEN, W0MAN, N0MAN, and N0MEN.

Sexual orientation is also difficult to determine as 24 hams have SEX, but only one with N0SEX There are 8 who are FAGs, while 10 claim to be GAY.

Baldness is also common among hams, as there are 56 who wear a HAT, another 66 CAP wearers, and 39 who have WIG. I did not include N0HAT, N0CAP and N0WIG in those counts. There are also 49 with a TIE, and one with N0TIE.

Age does not seem to matter to hams either as there are almost equal numbers of OLD (59) and NEW (58) hams.

An additional 19 think they are GOD, perhaps while they are on the AIR (81) with the 16 LID's, the 67 who are HOT, and the 62 who are BAD. There is a single ham who claims to be K1NG, and another who admits to having N0CLU.

There are 56 who like to EAT, 52 TEA drinkers, 54 GIN drinkers, and 51 GUM chewers. With all of this eating going on, there are 49 who are FAT, (including N0FAT), and another 61 who are BIG.

There are 37 who eat LOX. Oddly enough there are only 5 JEW's (perhaps because ham is not Kosher??) and 1 Atheist (N0GOD).

As for personality traits there are 49 who are ODD, 53 who are SHY and 52 who are SLY. There are 54 who are SAD, and 60 who are MAD.

54 hams have their heads stuck in the MUD, while another 68 are in the SKY

There are 55 amateurs who are PRO's, while 96 are content to be HAMs.

61 operators think they are number ONE, while 56 are in second place (TWO). There are 62 hams in TENth place, and a whopping 72 in SIXth.

VHF (74) seems to be a bit more popular than UHF (63). The low number of VLF'ers (44) is not surprising, as we do not have a 135 kHZ allocation in the US.

There are 49 with a RIG and one poor ham with N0RIG.

Alex / AB2RC

Jim,

For some reason, this discussion keeps going off on a tangent from the core "issue" that began our discourse. Perhaps I haven't stated it clearly enough, or during the discussion the original issue has become clouded.

I have responded to your comments below, but I fear that we will continue forever if we are not discussing exactly the same issue.

I understand that, due to your standards, you find Kim's callsign inappropriate. No issue there - that is entirely your right. I also understand that you do not wish to use it in any of your posts. Again, no issue there - I respect that.

For clarity, I'll restate it in clear and concise wording:

Kim feels that eliminating just her callsign from your post was unfair, as it singled her out. I agree. Would finding a compromise whereby neither your standards nor Kim's feelings - such as removing all of the callsigns and listing only names for all participants - have not been a fairer way to handle this situation for all concerned?

That's the only issue that I am discussing, Jim. Your rights and standards are not at question here.

73, Leo

>
>Nice attempt at diversion, Leo.

Not at all :) - you are fixated on her callsign being the issue. The
real issue is the manner in which you chose to single her out! As she
told you herself.

Instead, you choose to make a moralistic issue out of it. It is not.

>
>My standards are *exactly* the issue.

No.

Your handling of the situation is the issue. As stated many times. Not
your standards.

>
>I'm being told, again and again, that my choice not to put Kim's
>callsign in my posts is "wrong", and that my standards are of lesser
>importance than Kim's feelings.

Incorrect - that is not what you are being "told" at all. Please
reread my previous comments.

As for your standards being more important, they are not - they are of
equal importance. Hers and yours. Unless you are more important than
kim, that is.
>
>So let me ask the question straight out:
>
>Which is more important: following my standards/judgement/conscience,
>or Kim's feelings?

Both are equally important, Jim. Unless you are somehow more
important, as started above...

>

>
>My standards require that I not put Kim's call in the list - because I
>think it's inappropriate. I'm sorry if someone finds that annoying.
>But I'm not going to change it.

No problem - but you could have left them all out, couldn't you? As stated many times. A compromise indeed - but not a compromise of your standards at all.
>
>> As you are aware.
>
>I'm aware that I think Kim's callsign is inappropriate for the ARS.
>I'm aware that I won't intentionally use it in a post.
>I'm aware that others are trying to get me to change the previous
>two statements.

No arguement with the first two points at all Jim - it is your omitting just one callsign (hers) from your post that is the issue. I have said repeatedly, as has Kim, that you should have used no one's call in your post if the situation bothered you that much. That would have solved the problem without compromising your standards, wouldn't it? Who would have a reason to complain about that? She would have been treated equally to everyone else (her complaint), and her callsign would not have appeared in your post (your complaint). Is there a problem with this?

If you believe that her call is inappropriate, and you do not wish to use it in a post, those are your standards and are deserving of the respect of everyone. But, that is not the central issue of my posts to you - the above paragraph is.

>

You consider singling someone out and against their wishes courteous and friendly?

I don't.

>>
>> >Those words do not mean I must hide my standards under a bushel.
>>
>> Not the issue.
>
>Exactly the issue. Why do you avoid it?

I don't - that is not the issue at all.

Your standards do not allow you to use her callsign in a post. No
problem there at all, Jim. Omitting just hers was unfair, though -
that is the issue. As stated many times.

That is the issue that I am discussing. Not you, though - you are
trying to shift it to a position defensable by your standards.

>
>> >>You know.
>> >>
>> >>But hey, you beat Kim, right!
>> >
>> >Not according to Kim.
>>
>> According to you - read your own post!

>
>Leo, you are avoiding the central issue:

No. Not at all. Please reread my comments carefully! You are arguing
a different issue.
>
>Which is more important: following my standards/judgement/conscience,
>or Kim's feelings?
>
>That's the central issue, right there.

Nope. Not the issue at all, Jim. As stated many times.

Regarding which is more important, though - both. There was a way to
handle this without compromising either. As has been stated many
times.

Or are you saying that you are more important, Jim?
>
>> I expected better from the man who
>> often speaks of principles and high standards of conduct in his posts.
>>
>> The issue, as you are quite well aware, is your singling out of Kim in
>> a list.
>
>You mean using her name instead of her callsign.

No.

Not the issue, as you are aware (or should be?). Omitting just her
call in the list is the issue. Just that one call - no others.
>
>That was done because of my standards. Using her callsign in that list
>was inconsistent with my standard that it's inappropriate. So I didn't
>use it. As I have said before, no disrespect, insult, or singling out

>You are saying that I should ignore my standards out of courtesy to Kim.
>That having her callsign included in the list, rather than her name, is
>more important than any consideration of *my* feelings or standards.
>
>That's the issue.

Nope. As stated above, and many times. And as you are aware.
>
>> An issue which has been carefully avoided in all of your
>> responses so far.
>>
>Not by me. By you and others.

Nope. The issue has been stated many times.
>
>Say it right out, Leo. Tell me that I should ignore/hide/deny my
>standards of what is appropriate in deference to
>"courtesy" and Kim's feelings.

Nope. Compromise was possible, without impacting your standards. As
you are aware.
>
>> Are you unable or unwilling to face up to this single issue?
>
>That's all I've been doing in these posts.

Nope - you're facing up to a different issue. One that you can
justify with your standards. Please reread my comments carefully.

>
>> - or
>> shall we all continue merrily down the garden path with you? You are
>> fooling no one but yourself, Jim.
>
>How am I fooling myself?
>
>I'm aware that I think Kim's callsign is inappropriate for the ARS.
>I'm aware that I won't intentionally use it in a post.
>I'm aware that others are trying to get me to change the previous
>two statements.

Nope.
Nope.
Nope.

Not the issue at all. As has been stated many times.
>
>Are you aware of what you are telling me to do?

Yup - deal with the issue at hand. Not the one that you keep falling
back on.

>>
>> "It has always been a peculiarity of the human race that it keeps two

>
>Yup.
>
>You want me to keep my standards private, and not act on them, because
>they aren't the same as yours. Well, that's just not going to happen.

Nope. Please reread Mr. Twain's statement.
>
>btw - if Kim's callsign is "just a license number", then why
>not pick a different one? Why a vanity call at all?

Guess because it's her choice, Jim. I sure wouldn't want that call
assigned to me, but Kim does. Her way of poking a finger in the eye
of those who judge her by appearance alone, perhaps. Her own personal
reasons, though. And she has every right to have it - it's up to her.

ROTFLMAO!

Thanks, Alex, for taking the time to look all of these up! I had no idea how many sly folks there were in this hobby!

I wonder if Riley has seen some of these.....'W5TIT' is pretty tame by comparison to N0BRA or N0SEX . (Those ones DO send a pretty clear message all by themselves :))

73, Leo

...who almost blew a gasket when he read this!

Neither Part 97 or Part 95 mandates or authorizes public service. Part 97
however recognizes and encourages public service which Part 95 does not.
That was obvious from the beginning and I never challenged the fact that
Part 97 is altogether different than Part 95.

> They are a sort of laboratory condition.

Not really! They are actual residential and business areas, with existing power
lines of many types. While the number of customers isn't large, the technology
does work. It's just leaky.

>If the test results from ARRL
>are correct, 1 ham with 100 watts can effectively turn off the service

More than some hams/ You think that noise won't propagate by sky wave?

>But I see different levels of
>concern. Concern at a high level such as at the early part of the fight
>against BPL, when testing was needed, and arguments presented against
>BPL. The present situation, when it is being documented that the system
>is very fragile and has a track record of interference to emergency
>services (even if it is only a test) allows more leisurely prosecution
>of the problem.

Remember that it's not "a system" but rather several competing systems using
different technologies.

And recall that the BPL folks are using all then right buzzwords. "Third pipe"
"new technologies that foster competition" "increased/smarter utilization of
existing infrastructure". Etc., etc., etc....

> But prosecution has to go on.

Agreed!

Recall too some of the experiences that hams have already encountered. When WK3C told the story to a local paper, and demonstrated it, the BPL folks claimed
'he found a neon sign'. In a residential neighborhood at midday. Right.

And despite the experiences of Austria, Japan and others, BPL advocates say "there have been no reported interference cases".

That's what we're up against. Make no mistake.
>
> What do you think the F.C.C's response will be when ARRL or FEMA >trots out the Austrian BPL Red Cross interference data?

I don't know. Could be that it was an isolated incident. Or that the Austrian system
was "different". Never mind that Austrian radiated noise limits are lower than ours...

>Am I the only one that thinks that case is darn close to a show stopper?

I'm not counting on anything yet wrt BPL except that it needs to be fought.

Heck, it doesn't take an EE to see that the whole concept is badly flawed but the trials are being allowed to progress anyway.

"Hope for the best. Prepare for the worst."

Unshielded lines probably means their going to be knocked off line rather easily. On one of the space weather sites, there is a reference to the solar storm equivalent of the "Perfect Storm". This occurred in the mid 1800s and knocked out landline telegraphy and the induced currents on the lines leading to shorts in equipment that started several fires. Wish I still had that URL.

I use AutoAol and write my replies offline. Sometimes I don't see or reply to a
post right away.

>
> But yes, maybe I will just write something up. Maybe include
> ergonomics too.
>
Maybe we could collaborate on something like that. I have a number of ideas about ergonomics in hamshack and equipment layout, going back years before I ever heard the word. Built all my own shack furniture for the past 35 years or so because conventional stuff isn't well suited to ham use. (A basement shack gives one a lot of leeway).

Have also used CAD to make a really neat custom dial drum for the Southgate Type 7.

Or if ya just want a proofreader...

It's much easier for the entire issue, to do what I have done. I requested that Jim refrain from having my name in the list. Jim has said he'll do that.

The unfortunate thing is that I suppose I'll have to quit responding to his posts also, if I am to uphold to my *own* set of standards--because I think it is totally wrong for him to remove my callsign from an original post of mine. It is most unfortunate that his ambition to be "correct" is stronger than his ambition to dialogue.

Unfortunately, it's very unlikely that the ARRL would publish this
list (and it's excellent humour!) withour some serious re-editing...-
QST is a pretty - um, formal - magazine.

But they should - Definitely first-class material!

Hmmm, well. Does that mean that if anyone of the "seriously needs editing"
callsigns wrote something in to QST that, no matter how technical, pertinent
or informative the item might be, it would not get published?

Hmmm,

As I'm sure you've figured out, some in this newsgroup can (and will) pick a fight over anything. And they'll make it sound like the end of the world. Your callsign is an easy target. But, if you had another callsign, they'd find something else to fight about.

A friend, a very long time ham with a "W" call, suggested my callsign. He liked the "W5" part (same as a call he had years ago, I think) and thought the "net" part was cute because of my long computer experience (I was helping him with his computer at the time).

1001. A Newbies View On Things

Newsgroup: rec.radio.amateur.policy
Date: 2004-01-16 15:06:00 UTC
From: Scott <scott5mi@cox-internet.com>
Message-ID: <100fve0pt3vskc4@corp.supernews.com>
Source record: 85727

Hi folks.

Please allow me to give a "newbies" view on the current state of amateur radio, and also ask a few questions.

I recently took my Technicians License exam and passed with a perfect score. (I bring up the score just to indicate that I studied hard, and took the exam seriously). I am now studying to take the 5wpm mores code test. I have not yet purchased a radio, or even been "on the air". More on this is a moment.

I have also joined a local radio club, whose first meeting I attended last night. This club owns and maintains the local 2m repeater, and even though it is an open repeater, if nothing else, I feel as though by joining, I am helping to support a service which I plan on eventually using.

But what disappoints me is the fact that I left this meeting knowing absolutely no more than I did when I walked into the door. I had been led to believe that one of the best ways for a new guy just becoming involved in this hobby to get practical advice on things like your first purchase of equipment, which bands are best for what, and the different applications of amateur radio, was to join a club. Well, unfortunately, the majority of the meeting I attended was, in my opinion, controlled by a group of 7 or 8 ham "veterans" trying to impress one another with their technical knowledge.

So, I guess what I would like to do here is give my views on what I have seen so far, and invite anyone who is more informed on these matters to correct me.

1) The Amateur Radio Service is not an essential element in our society. Even in times of emergency, there is nothing you can do with a ham radio that you can't do with an internet connection, fax machine, land line telephone, or cell phone in similar circumstances. Ham Radio is a hobby, and like golf, gardening, bird watching, or any other hobby, it could cease to exist tomorrow, and nothing would really change.

2) To me, the most appealing aspect to Ham Radio is the gaining of knowledge. Learning the "in's and out's" of all that encompasses Ham Radio o peration is the true fun, whether it is dx'ing, satellite, CW or whatever. But, like building a boat in a bottle, or even doing a crossword puzzle, the satisfaction comes in the steps taken to accomplish the task, not the end result itself.

3) From all accounts that I have heard, the number of new Amateur licenses issued has been declining for years. This would tell me that the best way to save the hobby was to open new Hams with open arms, instead of clinging white-knuckled to the past (packet radio, morse code etc.) look to the

future, and make it fun.

Thanks for letting me rant folks. Now for some questions.

1) Can anyone point me towards any resources to assist someone brand new to the hobby? (Stuff like recommendations on the type of equipment to get for the first time buyer)?

2) Also, any sources to purchase used equipment. I think I would rather buy more functional used stuff, than new equipment that has less "bells and whistles".

3) One more thing...I am looking for information on antennas that is geared to the novice.

Thanks folks.

Welcome to the hobby.

You are on the right track - the best way to learn is by finding someone experienced who can answer your questions as they arise. I'm sure that there are some folks at your club who would be happy to work with you - just ignore the fossils and talk to the others - there is probably someone with similar interests to yours in there somewhere (and equally tired of listening to the 'experts' - look for bored facial expressions, or snoring :))

Brief answers to your questions are below.

On Fri, 16 Jan 2004 09:06:00 -0600, "Scott"
<scott5mi@cox-internet.com> wrote:

>snip
>

>the first time buyer)?

This depends a lot on what area of amateur radio you are interested in. 2-meter operation is quite popular - all you need is a handi-talkie and a list of local repeaters, and you're ready to go! OTOH, if your interests lie towards experimenting with the digital modes or DXing on HF (if you're studying Morse, I suspect that the prospect of shortwave operation interests you), then it gets more complex.

What would you like to do?

>
>2) Also, any sources to purchase used equipment. I think I would rather buy
>more functional used stuff, than new equipment that has less "bells and
>whistles".

I have two preferences here.

Local hamfests are my favourite place for finding used equipment - the prices can be lower than anywhere else, and you may be able to try before you buy. Caution is required, though, as there are no warranties - equipment is as-is.

Find one near you using this ARRL web site:

http://www.arrl.org/hamfests.html

Another possibility is a local ham radio store's traded-in equipment -
not cheap, but they will usually give you some warranty with it. You
can also shop by mail order or over the Web if a store isn't near you.
Most of the big shops advertise in QST or CQ - have a look, and check
out their web sites for what you need.

Online auctions such as eBay can be a good source of equipment as well
- but again, no guarantee that the equipment will work properly, and
the prices are considerably higher than at a hamfest.
>
>3) One more thing...I am looking for information on antennas that is geared
>to the novice.

The type and complexity of your antenna will depend heavily on what
you want to operate in the amateur spectrum - do a search on Google
for "Ham Radio Antennas", and you will find quite a few offering plans
for pretty easy-to-build ones to start with.

An example:

http://www.packetradio.com/ant.htm

Did you introduce yourself as a newcomer to ham radio? Did you seek out
any of these experienced hams for advice? Did you expect them to
automatically know you were a newbie with little experience and rush to
your assistance? I think basing your opinion of the club on only one
visit is a bit hasty. Continue to go to the meeting and get to know some
of the other hams before you pass judgment.

You haven't participated in any disasters yet have you? What happens
when all power is down, phone lines down, cell networks jammed to the
point of being totally useless for any emergency. I will give you an
example.
In 1979 a mile wide tornado ripped through Wichita Falls, Texas taking
out the main power lines serving the city. The entire city was without
power, most phone lines were down. What few circuits were working were
so overloaded it was nearly impossible to get a call into or out of the
city. Little good the internet, fax machines, would have been. If there
had been cell phones like there are now, most of the towers would have
been down or damaged and what of the cell phone network might have been
working would also have been overloaded. Hospitals were on emergency
power, filling stations could not pump gasoline, most business were
closed, the area the tornado ripped through look like a war zone. Police
and fire and other emergency services antennas were down. The major
reliable communications came from amateur radio. Clubs from around the
area brought in VHF repeaters and HF stations, powered by generators.
Two meter base stations were set up at stratigic locations, such as
hospitals, police and fire departments, and the red cross. Hams with
handhelds accompanied emergency officials to provide communications.
Until some of the public services were restored, the major traffic in
and out of the area was handled by amateur HF communications.
In the 1980's an earthquake hit San Francisco with similar results. What
phone circuits were operative were so overloaded it was next to
impossible to call in or out of the city. Amateur radio provided
communications with VHF and HF capabilities.
Ask those who participated in the 9/11 disaster and you will hear
similar stories.
So saying that the internet, fax machines, cellsphones ect., will always
be able to handle communications in any disaster is ignoring the facts.
The Office of Homeland Security recgonizes the ability of amateur radio
to emergency communications and is incorporating that into their plans.
>

> result itself.

And you can get a lot of help in that area from fellow hams, but don't
expect others automatically know your needs and to stumble over
themselves to rush to your aid unless you seek their help.

Check you library for some of the ARRL antenna books, or the Amateur
Radio Handbook.

Good luck in your new hobby.

I won't say Ham radio is essential, but you downplay it too much. Perhaps you live in an area where major disasters are fairly uncommon, or your local public service agencies are better prepared, but emergency communications (supplemental communications) is fairly important in this part of the country. During a major disaster, the normal communications systems (internet, fax, phones, and cellular) fail very quickly. Dring a recent hurricane, even the police, fire, and medical, communications system suffered major damage. The role ham radio, and ham radio operators, played during the storm was really amazing. A number were out in the middle of the night during the storm trying to repair downed antennas for the police and fire departments. Several manned local radio stations, feeding storm information from other area hams to the broadcasters. Others manned evacuation shelters. Following the storm, still others helped to repair antennas at hospitals (or set up batteries to power their communications systems). Others manned aid stations. Was any of this essential? Perhaps not, but I do think it was helpful.

As experience has shown -- oft times internet connection, fax machine, land
line
telephone, or cell phone services are dead or totally overloaded.
>

>
True for some situations, but when a bigger disaster takes out the
infrastructure that
the land lines, faxes, internet and cell phones depend on, enough ham
stations usually
survive the disaster that emergency communications can still happen.
Ham radio
requires no infrastructure other than the radio, mic or code key,
antenna and a power
source (battery or a car) to function.

Cell phones work pretty well if you need to report a car accident, but
an earth
quake will likely take out the system the cell phones need to function.

Craig,

You may be getting wealthy, perhaps, but that may change soon. Please don't be surprised if your Internet access at McGill University is disconnected very shortly - pyramid schemes such as this one are in clear violation of both the University charter and Canadian law:

http://sbinfocanada.about.com/cs/marketing/g/pyramidscheme.htm

"Pyramid schemes are illegal in Canada. Pyramid schemes are regulated by the Competition Act and the Criminal Code of Canada. "Any person who participates in these schemes in any capacity may be committing an offence and could be prosecuted" (RCMP)."

"People who are convicted of contravening the multi-level marketing or pyramid selling provisions of the Competition Act can be convicted and sentenced to a fine at the discretion of the court or a prison term of up to five years, or both."

A copy of this post with full headers has been forwarded to abuse@mcgill.ca for their review and action.

Fortunately for you, Craig, McGill does have an excellent Faculty of Law - I would strongly advise discussing this issue with them as soon as possible. While you still have email access, you can contact them at probono.law@.mcgill.ca .

Have a nice weekend.

73, Leo

PS - I noticed your munged email address in the post from McGill (also in violation of their Code of Conduct) - one of these addresses isn't you, is it? :)

>POSITION # 1 PAYPAL ACCOUNT: vwgolf96@canada.com
>POSITION # 2 PAYPAL ACCOUNT: sheripy@yahoo.com
>POSITION # 3 PAYPAL ACCOUNT: phastie@rogers.com

I sure wouldn't want to be one of the other two - did they used to be friends of yours?

news:100fve0pt3vskc4@corp.supernews.com...
> Hi folks.

Hello Scott and congrats on the pass. I am always glad to see new new blood in the service. Our no-code tech course for our club started on Monday and we had 10 people sign up. Very gratifing ....

Regarding the club .... I'd go for an few more meetings just to make sure as sometimes first impressions are not true. If you are are not comfortable then turn and walk away. I have done that in the past .... there is nothing wrong with utilizing your energies as best you see fit.

Equipment .... like posterior orifices ....everybody has one and I am surely not going to bore you with mine. Talk to someone regarding you operation desires and then they can steer you the right way. I would be glad to talk to you one on one if need be via Echo-Link.

Just remember Scott that hams are a cross section of the populace .... I have known hams that approach sainthood and those that are convicted murderers. You will have plenty of stories to tell over the years via this "hobby" and thankfully the preponderance of them will be positive.

In closing Scott ....don't be afraid to give your call .... I don't think many ax murderers hang out here.

God Bless ... 73 KI3R Tom Popovic Belle Vernon Pa.

>
>I understand that, due to your standards, you find Kim's callsign
>inappropriate.

That's correct. It's also an issue to some people.

> No issue there - that is entirely your right.

Some people say it isn't. Not you, but some others.

>I also
>understand that you do not wish to use it in any of your posts.

Also correct. And also an issue to some people, who say that my deletion of
Kim's call is "wrong".

>Again, no issue there - I respect that.
>
>For clarity, I'll restate it in clear and concise wording:
>
>Kim feels that eliminating just her callsign from your post was
>unfair, as it singled her out. I agree.

And I disagree. Kim singled herself out by choosing that callsign. As you are
aware.

>Would finding a compromise
>whereby neither your standards nor Kim's feelings - such as removing
>all of the callsigns and listing only names for all participants -
>have not been a fairer way to handle this situation for all concerned?

No, it wouldn't.
>
>That's the only issue that I am discussing, Jim.

No, it isn't, but we'll get to that later. Right now, let's discuss that issue.

It seems to me that what you're saying is that I should either include
everyone's callsign, or no one's.

Now since I don't wish to include Kim's callsign, that leaves only the option
of including no one's callsign, in order to accomodate Kim's feelings.

But what about everyone else's feelings, including mine? I want my call listed.

I would feel disrespected to be listed by name rather than callsign or name and
callsign on an amateur radio newsgroup.

Maybe Dee, Dave, Carl, Dwight, Jim, Jim, Steve, et. al also want *their*
callsigns listed, and would feel disrespected if I listed by name only.

Don't the feelings of everyone else count?

Note also, Kim said that if I wouldn't use her callsign, she didn't want to be
on the list..

>Your rights and
>standards are not at question here.

Yes, they are. I've been told that "it's not my place" to determine whether a
callsign is appropriate or not. I've been told that my actions are "wrong".

As you are aware.

Not fixated. It's one of the issues. There would be no
problem if she chose an appropriate callsign.

> The
>real issue is the manner in which you chose to single her out! As she
>told you herself.
>
That's *her* issue and *your* issue. But it's not the *only* issue.

As you are aware.

>Instead, you choose to make a moralistic issue out of it. It is not.

It's a moralistic issue when people tell me I'm not doing "the right thing"
and that something is "not my place" to decide.

It's a moralistic issue when I'm told what I *should* do in a post.
>
>>My standards are *exactly* the issue.
>
>No.

Then what's the problem?
>
>Your handling of the situation is the issue. As stated many times. Not

>
>No problem - but you could have left them all out, couldn't you?

Not without annoying others and myself.

>A compromise indeed - but not a compromise of your
>standards at all.

It would be a compromise of my standards. And why should I compromise them?

If I follow your suggested compromise to its logical conclusion, I should not
use *anyone's* callsign in *any* post - so as not to hurt Kim's feelings.

>>I'm aware that I think Kim's callsign is inappropriate for the ARS.
>>I'm aware that I won't intentionally use it in a post.
>>I'm aware that others are trying to get me to change the previous

>of those who judge her by appearance alone, perhaps. Her own personal
>reasons, though.

Sure. That does not make it appropriate to the ARS.

>And she has every right to have it - it's up to her.

I don't think FCC should issue such calls. Nor should hams choose them. They do
no good to the ARS. It wasn't the "right thing to do".

Your argument is fixated on Kim's "right" to choose such a call, and
ignores a ham's responsibility to the ARS.

Just my opinion.

As I was reading his post, I thought that it might be....

His three points regarding what he'd seen so far were a tad
contentious, and could well fuel a flame war in this group. When I
read his three questions, though, they seemed quite legitimate, and
were in line with the things that I wanted to know right after I got
my licence. And, his radio club experience seemed pretty plausible
too.

That got me thinking that it may not be a troll after all? So, I
snipped out the contentious stuff, answered the questions, and figured
that we'll all find out soon enough...

He seemed interested enough in learning the basics - and I'm pretty
sure that he is very new to Amateur Radio, as he didn't ask a single
question about Kim's callsign :)

sorry bout that....

Dave:

OK, I give up -- what the Sam Hill is "branch water?" I heard it mentioned
a few times on the old TV program "Dallas," when J.R. Ewing used to order
a "bourbon and branch" at the Ahwl (Oil) Baron's Club. Is it water that
dripped off a tree branch during the rain, or did it come from a branch
tributary of some particular river, or what? Or is it just another way of
saying "Club Soda," as I suspect?

I drink Corona, drive an '03 Toyota Corolla LE, wear a pair of Dockers and a pullover shirt to hamfests (no badges except my ARRL OBS Call Sign Badge), date a single Mom not named "Mabley," and will probably never own an ICOM IC-7800 for the simple fact that with the 10 kilobucks I could buy an IC-746, a tower, a big antenna farm, and lots of other stuff, and still have a chunk of change left over! If I ever win the Powerball Lottery, I still don't know if I'd invest in a 7800, although there would be little reason not to under those circumstances!

>
>And I disagree. Kim singled herself out by choosing that callsign. As you are
>aware.

Yes she did - and quite intentionally, too, as she has stated.

That wasn't, however, what I was saying in my statement above. Simply that Kim feels that you singled her out too, by omitting just her call from the list.

Forget the inappropriatenesss of the call for a moment....do you see where she might get that feeling?

>
>>Would finding a compromise
>>whereby neither your standards nor Kim's feelings - such as removing

Agreed - in order to treat everyone equally, that would be the only other option available given the situation.

>
>But what about everyone else's feelings, including mine? I want my call listed.
>

>I would feel disrespected to be listed by name rather than callsign or name and
>callsign on an amateur radio newsgroup.

Yes, and I believe that Kim feels exactly the same way, Jim. For the
same reason as you, I suppose - she is also a ham. (She does not feel
that her call is in any way wrong, remember.)

>
>Maybe Dee, Dave, Carl, Dwight, Jim, Jim, Steve, et. al also want *their*
>callsigns listed, and would feel disrespected if I listed by name only.
>
>Don't the feelings of everyone else count?

Of course they do - but are you sure that these people world be that
upset by this? (except Dave, of course - he appears, from his recent
correspondence, to be annoyed that Kim is still breathing... :))

In fact, if it had been my post, I would have revised it to names only
immediately after Kim's original complaint. And seen what comments
came back next. If I had several legitimate complaints (without the
agendas that we have seen in several recent posts {not yours, Jim!)
which obviously relate to Kim personally rather than just her
call...), then yes there would be no other alternative than to put the
calls back - but I would have written and offered Kim the option of
going by name only or dropping out before I went ahead. At least I'd
be able to tell Kim that I tried to fix it for her, but it didn't work
out with the rest of the group.

Maybe it's just me, but I would try first to resolve her complaint if
possible, out of respect for her as a fellow amateur. I prefer
compromise whenever possible - not compromising my standards, but
finding a way to achieve a balance.

>
>Note also, Kim said that if I wouldn't use her callsign, she didn't want to be
>on the list..

True, but that was after the had become frustrated with trying to
solve this issue.

>
>>Your rights and
>>standards are not at question here.
>
>Yes, they are. I've been told that "it's not my place" to determine whether a
>callsign is appropriate or not. I've been told that my actions are "wrong".
>
>As you are aware.

I did state that it is in fact no one individual's place to determine
what is or is not appropriate for the ARS - that role belongs to the
regulators, and to the will of the majority of us, I suppose.

Each of us is however completely in charge of determining what is
appropriate for us as an individual, however. No question there.

Jim, my intent was not to criticize your standards - simply to point
out that perhaps a more amicable solution to this issue was possible
without compromising anyone's standards - finding a common ground for
all.

That's it - that's my point.

>Interestingly, the manufacturer lists the above list under "Firmware
>Revision History".

All that many updates?

Tells me they didn't know what they were doing to begin with, or just
shoved software and hardware out the door before they had finished
testing the firmware and software.

>> I would think that Orion could have stabilized the programming by

>nap, Leonard.

Zzzzzzzzzzzzzz.

Oh, my, you drone on busy prussian bee. It's like listening to a
lecture on 1800s science...all done by amateurs.

Nothing new, same old "landfill" remarks from the prussian.

>
>Dee D. Flint, N8UZE

There are a total of FIVE paragraphs under 97.1, double-D.

Those are ALL applicable.

Do they "not authorize" four other activities?

Good luck on this one now...

Yes, Your Emminence, please ALSO remind others of that wonderful group of expletives from a Model Amateur Extra such as -

"PUTZ!" "Your scumminess" "Scumbag"

And other assorted hateful words of anger.

Let's not forget that other gem that seemed to "write itself," "LANDFILL."

Some elitist pro-coders are so righteous and noble that others are simply a dumping ground for their garbage?

"Civil debate."

On a scale of 0 through 10, such AMATEUR RADIO activity is good for a -20.

Please keep all that in mind as you write up the Holy Orders of the Day, your Emminence.

I'd like to concentrate on the SUBJECTS instead of your incessant
prussian arrogant order-giving, Herr Robust.

If you feel that anyone you don't approve of is offensive to you,
your holiness, feel free to have their ISP get rid of their account
or at least forbid them to post in this free, open, unmoderated
newsgroup. Or just skip over the post.

Do you need to change the prescription in your monocle again, Herr Robust? You can't continue to do an impression of a modern prussian officer without it...go rent a DVD with Otto Preminger in "Stalag 17" and study it some more.

Tsk, tsk, tsk...you didn't capitalize the "we" fearsome leader!

You speak for the amateur community. Always. Even if the
majority of them do not agree with you...

>> I expected better from the man who
>> often speaks of principles and high standards of conduct in his posts.
>
>Jim is quite obviously acting on his principles in this matter.

The [expletive deleted] Formerly Known As Reverend Jim is acting
as Judge, Jury, and Executioner in this matter.

So are you. Must be that U.S. Amateur Extra Special Dispensation
thing.

>> The issue, as you are quite well aware, is your singling out of Kim in
>> a list. And not creating a level playing field out of courtesy to
>> her. Period. An issue which has been carefully avoided in all of your

>calls.

How does all that interfere with your life, fearless leader?

Are you on some evangelical crusade to rid the world of horrible
filthy disgusting language that You find offensive in an unmoderated
forum?

Of course you are...throwing your weight around (lots of it)...making
like a control freak on a binge.

>Now she has to live with the fallout. Some will give her a *wink* or a
>*chuckle*. Some will voice their disapproval.

There shall be NO filthy offensive deragatory words in olde-tyme
hamme raddio sayeth the fearless leader. May all who mention
even remotely related to s*x rot in cb hell?

>> Are you unable or unwilling to face up to this single issue? - or

Leo's morals are a LOT better than the ones you exhibit in here.

A fantastic betterment of the human condition, Herr Robust, much
better than the prussian arrogance of "do like you say."

Wonderful example of olde-tyme hamme raddio you present, Herr
Robust. Makes everyone lust (oops, said an [expletive deleted])
to learn morse code and be a hamme, right? Then they, too, can
be just like You.

>Amateur Radio Service (your only aim here)?

Someone shook your chains?

Are you the Moderator in here? (no, but you like to think so...)

Are you the Supreme Court (or Courtesan) of ham radio? (no, but
you act like it...)

Morse code is the heart and soul of all olde-tyme Hamme raddio
amateurs.

The olde-tyme hamme raddio peoples insist on morse code testing
forever and ever, amen.

What has morse code testing regulations to do with Herr Robust?
Not a single d**n thing.

Peas be unto you, whirled leader.

>>It's a *legal* one. No one disputes that.
>
>Thank you!
>>
>>> You can dislike it, revile it, be insulted by it
>>> - whatever you choose to do. But, you must respect the fact that it
>>> is a valid amateur callsign - because it is! Just like yours, issued
>>> officially by the FCC.
>>
>>I did not ask for this specific callsign. Kim asked for hers.
>>>
>>> Jim, you aren't the guy who gets to determine what is or is not
>>> appropriate for the ARS.
>>
>>Not true!
>>
>>We *all* have a say in what is and is not appropriate for the ARS. And that
>>includes me.
>
>That wasn't the point - I said specifically that you are not the one
>who gets to make that decision.

Oh, but the Amateur Formerly Known as Reverend Jim IS ham
radio, therefore he decides what is applicable and what is not.

[it's either that is be caught in a word blizzard of long, long, long
postings or a Sermon On The Antenna Mount]

>>> That role belongs to the regulatory authorities.
>>
>>And to all of us hams.
>
>No - we can recommend and advise, but the regulatory authorities make
>the decision. Not us.

He IS U.S. ham radio. He's said so hisself. :-)

>>> Whatever your problem is with this particular call, it
>>> is between you and the FCC - not us! If they declare that it is
>>> inappropriate, then it will be withdrawn. If not, it stays. Whatever
>>> it is - it's their decision - not yours and mine!
>>
>>That's only true as far as the issuance of a callsign. Not its use.
>
>Absolutely. But not the point.
>
>The issue is between you and the FCC. They issued it - they can

>recall it if it's "inappropriate".

He IS U.S. ham radio. Said so.

>
>>>
>>> As you are aware.
>>
>>> >As I have stated before, no disrespect was intended. But I am not
>>> >going to use Kim's callsign in my posts, because I think it is
>>> >inappropriate for the IRS.
>>>
>>> In your opinion, Jim - not necessarily the opinion of the FCC, or many
>>> members of the ARS.
>>
>>I'm not telling them not to use Kim's callsign.
>>
>>You are telling me I *must* use it.
>
>Incorrect. Not at all.
>
>That isn't the issue. I said omitting just one callsign from your
>post was wrong. No one denies your right to not use it - but you
>could have omitted all of them, to level the field. What standards
>woul that have compromised, Jim?.

The Amateur Formerly Known As Reverend Jim sets the
standards. He does not make mistakes.

>
>>
>>Not gonna happen.
>
>>
>>> However, no one is trying to say that you must
>>> use Kim's callsign in your posts - the issue is with your intentional
>>> exclusion of only her callsign from your list!
>>
>>Which is the same as saying I *must* use it!
>
>Nope - just omitting call one out of a group was wrong. Disrespectful,

That is not entirely unusual, and nothing to be worried about for now.

>I had been led to
>believe that one of the best ways for a new guy just becoming involved in
>this hobby to get practical advice on things like your first purchase of
>equipment, which bands are best for what, and the different applications of
>amateur radio, was to join a club. Well, unfortunately, the majority of the
>meeting I attended was, in my opinion, controlled by a group of 7 or 8 ham
>"veterans" trying to impress one another with their technical knowledge.

You have just described virtually every meeting of every amateur radio club
ever organized on this planet. Again, nothing unusual.

>So, I guess what I would like to do here is give my views on what I have
>seen so far, and invite anyone who is more informed on these matters to
>correct me.
>
>1) The Amateur Radio Service is not an essential element in our society.

Definitely not, but it does serve a useful purpose. After you've been a ham
for a number of years, gained some knowledge and experience, and seen
for yourself what is possible, you will realize that.

>Even in times of emergency, there is nothing you can do with a ham radio
>that you can't do with an internet connection, fax machine, land line
>telephone, or cell phone in similar circumstances.

Not necessarily true in all cases. There have been virtually thousands of
documented cases in which, during severe emergency conditions, amateur
radio operators have been the only practical communications link to "the
outside world" available to a community experiencing a situation which
caused a widespread breakdown of primary communications resources.

>Ham Radio is a hobby, and
>like golf, gardening, bird watching, or any other hobby, it could cease to
>exist tomorrow, and nothing would really change.

Again, not necessarily true. If amateur radio were to cease to exist tomorrow,
then, on the next day, it would have to be re-invented in order to regain the
practical backup communications capability it provides.

>2) To me, the most appealing aspect to Ham Radio is the gaining of
>knowledge. Learning the "in's and out's" of all that encompasses Ham Radio o
>peration is the true fun, whether it is dx'ing, satellite, CW or whatever.
>But, like building a boat in a bottle, or even doing a crossword puzzle, the
>satisfaction comes in the steps taken to accomplish the task, not the end
>result itself.

I vehemently agree.

>3) From all accounts that I have heard, the number of new Amateur licenses
>issued has been declining for years.

Actually, the total number of licensed amateurs in the U.S. is growing, but at
a pitifully slow rate of approximately 0.003 percent.

>This would tell me that the best way to
>save the hobby was to open new Hams with open arms, instead of clinging
>white-knuckled to the past (packet radio, morse code etc.) look to the
>future, and make it fun.

While I don't disagree that we need to be open to more new hams, the simple
fact of life is that the old communications technologies we "cling to with
white-
knuckles," i.e. the Morse code, RTTY, packet radio, and even Single Sideband
voice, all serve a very practical and useful purpose in carrying out our
primary
mission which is to be capable *backup* communicators under conditions where
primary communications systems become unavailable for whatever reasons.
Everything we've ever known about radio technology is always going to be
applicable to practical and effective communications, and we need to retain the
basics in order to understand and create the advances.

>Thanks for letting me rant folks. Now for some questions.

"Ranting" is what this newsgroup is all about. Carry on.

>1) Can anyone point me towards any resources to assist someone brand new to
>the hobby? (Stuff like recommendations on the type of equipment to get for
>the first time buyer)?

Yes. That club you joined, but didn't learn anything from on your first meeting.
Go back to the next meeting, and the next, and slowly get to know the people there and let them get to know you. Eventually you will find someone there who can help to steer you in the direction you want to go. However, keep in mind, that radio amateurs are essentially "self training," which means that it is primarily
up to you to dig in to the available books, magazines, web sites, and other information resources. That's what I did, that's what virtually every successful
radio amateur did. Nobody can beat you over the head with a "knowledge stick" and thus fill your head with things you didn't know a minute before. It will take an investment of time and money on your part to acquire knowledge and the equipment you need to create an effective and efficient amateur radio station. That should be your goal.

>2) Also, any sources to purchase used equipment. I think I would rather buy
>more functional used stuff, than new equipment that has less "bells and
>whistles".

Try eBay for starters. Also, check out the ARRL web site (www.arrl.org) for hamfests in your area.

>3) One more thing...I am looking for information on antennas that is geared
>to the novice.

I'd suggest that you invest in the ARRL Antenna Book. It has something for virtually every possible application.

Bottom line: Nobody can help you become an amateur radio operator better than you can your own good self. You need to open books and read them, then open some more books and read some more. I'd suggest some simple electronics projects you can build yourself, in order to get some basic experience with electrical theory and electronics principles. I'd also suggest that you give top priority to investing in a good HF transceiver with general-coverage receive capability. The Yaesu FT840 is around $600 brand new, and could be your main HF rig for years to come.

One more thing: Resolve to learn the Morse code and to use it on the air. Decide from the start that you are going to be a proficient CW operator, and don't give in to any of the frustrations normally associated with learning to use this uniquely practical, effective, efficient, and universal communications mode. We have all experienced them, and people from all walks of life have overcome them and become proficient CW operators. It's not that big a deal, and the only problems you'll have achieving success are those you make for yourself.

>Thanks folks.

Your welcome. You will find more good advice from other regulars in this newsgroup. Start reading; the learning process starts now.

Oh Lord no, Larry--nothing fizzy at all. A branch is a swift-running
little stream. There's a town downstate named Jumping Branch. It is
named for a nearby stream.

Sad, truly sad. In the antique car club I belong to we always introduce
new members at the meeting, we also go around the room at least once
so anyone can ask a question, offer a bit of advice, etc. That fosters
even more 1 on 1 conversations after the meeting ends.

> So, I guess what I would like to do here is give my views on what I have

and
> like golf, gardening, bird watching, or any other hobby, it could cease to
> exist tomorrow, and nothing would really change.

Wrong. Amateur radio can and has been the ONLY emergency
communications available in many emergencies. Think for a minute
about the scenario of an emergency. No electricity, no internet,
no fax and in many cases no landline if you don't have a plain vanilla
phone that is powered by the teephone line...and even if the
phone is line powered, many times even basic phone service is
out.

> 2) To me, the most appealing aspect to Ham Radio is the gaining of

Different strokes for different folks. Some like the steps, some
the end result. There is no "norm" in my obinion.

> 3) From all accounts that I have heard, the number of new Amateur licenses

You need to tell us more about what type of on-the-air
you want to do.

> 2) Also, any sources to purchase used equipment. I think I would rather
buy
> more functional used stuff, than new equipment that has less "bells and
> whistles".

There's always EBAY plus the amateur magazines like QST and CQ.

Yes, that looks like your mode: instant expert; proposals that we accept
what we find in bad taste. Your condolences aren't needed.

Yes, I do. You must not think so as you "expected better" than for him
to do so.

So the Mark Twain quote isn't an accurate assessment of humankind?

No kidding? Do you think that putting to rest any comparitive tie
between your action and Jim's could be on my agenda. Be sure to mark
down "pointing out Kim's lack of good judgement in choosing her
callsign" as an item on my agenda.

> The dialogue on this thread that has just been winding down the past couple
> of days has less to do with my callsign than it did with overall practices
> in newsgroups.

Your callsign is linked to the matter to which you've objected: that
someone refuses to type your callsign in a newsgroup post. Your
followup was to alter one of his posts to make it appear that he'd used
your callsign.

> Yet, Dave persists in defending the topic from the angle of it having had
> more to do with my callsign!

Defending the topic? I'm not defending a topic, Kim.

> He's managing to achieve nothing but tripping
> over his own self.

Your inability to comprehend doesn't equate to my tripping over anything.

Oh no, Kim. See some of Len Anderson's wordy posts for examples of
pontification.

> How many times have I clearly
> stated: I know what I did, I know what I did trumped what Jim did (i.e., had

If you knew what you'd done, you'd not have attempted to equate your
changing of an attribution with Jim's omission of your callsign.
The rest of your talk about trumping, impact and unwillingness to change
anything you've done is simply confirmation of your thumbing your nose
at the world.

> To me, attributes, or deleting things such as signatures and things from

I might be, Kim. Why not attempt to explain it to me? How do you
commune with God without praying?

> Oh, and please, don't pray for me. Most people who say things like that are
> saying it to be vindictive---OH, that's right!!! You are being vindictive!

I didn't say I'd pray for you, Kim. I asked why I should do it if you
aren't willing to take on the task yourself?

Care to explain how I am being vindictive? I don't see you as
vindicable.

Not at all, Dave. Not an expert at all - just someone who believes in
treating people fairly, and isn't easily offended by mere words.

Keep the condolences, though.

I'm under no obligation to use Kim's legal callsign here or even on the
air.

> Sorry, I don't understand this one at all, Dave - how is Kim annoying
> you? By simply existing, or by having a "bad taste" callsign. or ?

You certainly wrote "annoy the holder of a call". If Kim has the
potential to be annoyed by someone's choice not to use her call, I can
certainly be annoyed by her use of it.

> >> Wouldn't it?
> >> You bet.

My identity isn't hidden, "Leo". I don't know that your name is Leo. I don't know your call. I don't even know that you're a radio amateur or that you're in Canada. As far as Kim being honked at Jim's refusal to use her call in a newsgroup post, you're simply wrong.

> >> "CONSIDERATE...never knowingly operates in such a way as to lessen the

> not on the air? Interesting concept.....

Wanna talk about interesting concepts? How about using part of the "Amateur's Code" which says "never knowingly operates" to discuss something where we're not operating? If I'm talking to someone on the air, I shall to be friendly. I'm not obligated to work any station just because that station calls me. I won't be working Kim on the air. That is my perogative.

> That must be one of those 'flexible' standards, huh?

You may operate or not operate. You may respond to a call by a station or not. If three stations call after a CQ, you may legally and morally discriminate by answering one over the others. You may choose to not answer all of them. That looks like a fairly flexible standard to me.

Just for the record, my opinion is that it is Jim's list and he has the
right to set it up anyway he wishes, whether that is names, callsigns, or a
mix. His list, his choice.

Not exactly correct, is it, Brian? I wrote that French amateurs had
called me and that I'd worked them below 50.200.

> 2. You later stated that you would continue to do so because you have
> no responsibility for where bootleg French hams want to operate.

I have no responsibility to ensure that any station I work is entitled
to use the piece of spectrum he occupies. The responsibility for being
where he's supposed to be lies entirely with the individual operating.
How is it that you find the concept difficult?

> And 3. You stated that you'd be happy to tune right by a legally
> licensed American amateur because your're not required to respond.

Having read and memorized Part 97, can you quote the portion requiring
us to call any station or to respond to a call from another station?

> That is how I can be sure.

You had only three things to add up. You still arrived at the wrong
answer.

> Did you have a point about Kim's
> > callsign?

> Yes. It is legal and valid, but you show a preference for out of band
> Frenchmen.

Kim's call is legal but in poor taste.

> Is there anything else?

There is much else. Keeping searching for knowledge.

There are sometimes easily spotted clues. For example, anyone who has received their first license after about 1994 in the contiguous 48 states and that first license was a Tech or General will have a 2x3 call unless they have a vanity call or upgraded to Advanced or Extra and got a new sequential one from those pools. The sequentially assigned 1x3s disappeared in most call areas by the end of 1994 though some areas may have had a few still available for a year or so after that.

For example, I recieved my call in 1993 and you can see that in call area 8 we were close to the end of the sequentially assigned 1x3s beginning with N. The sequentially assigned 1x3s beginning with K or W had been used up some years before that.

Or you could just look it up in the FCC database.

How right you are. A number of beholders have deemed Kim's call vulgar.
I'm one of them.

> But I don't really see the word itself as vulgar,
> especially in an innocuous radio callsign.

That is apparent.

> Would you be so offended if it
> had been issued by the FCC at random? Would you be so offended if it had

Yes to both.

You really think in that way? Do you think I'd approve if Kim had chosen a vulgar name for a male body part to use as the suffix of her call?

There's a guy up in Orlando, Fla. who has been running an
unlicensed station in the FM broadcast band for a while.
He claims 50 watts & a Comet vertical at 40 ft. I can
hear him on my car radio in most parts of Orland & vicinity.
I've heard him in Ocala & Sebring, which are about 60 miles
away, but that was probably temporary conditions.

>is my perogative.

To the first point - that's just funny, Dave. You are a paragon of
ham virtue with a microphone in your hand, but give you a keyboard and
all of that goes out the window. LOL!

To the second - you sure have no problem working her here, Dave....:)
- in front of thousands of fellow amateurs, world wide......

But it is indeed your prerogative to not work any station that you
choose not to. Duh.

>
>> That must be one of those 'flexible' standards, huh?
>
>You may operate or not operate. You may respond to a call by a station

That ain't the standard that I referred to, Dave. Here it is again,
in case you missed it the first time:

>> You mean you consider it appropriate for an amateur to behave
>> inconsiderately or in an unfriendly manner when so long as he/she is
>> not on the air? Interesting concept.....
>> That must be one of those 'flexible' standards, huh?

Flexible as in yours to choose to adhere to at your own
convenience.....

The FCC doesn't always go with what a popularity contest yields.
One "good" argument can trump many "me too's".

The FCC may just decide to do nothing, leaving things as they are.
In which case, just learn the damm code. I did it years ago, and
I'm not that good at those sorts of things. Might as well study for
and take the general written, so there's no keeping the CSCE around
proving you did 5wpm forever issues. I upgraded to extra partly to
"lock in" my old style tech plus (5wpm and general written) credit.
And HF is fun.

He mentioned birdwatching in the orginial post, so he likely figured that
Kim was abird watcher. A tit is a kind of small bird, if you thought
of something else, well.... ;-)

My artifact Tymeter crapper landed in the dumpster. I guess ya missed
it when you surfed my dumpster pile. Sorry dude.

The stupid thing was bigger than my whole 100W HF TS-50 mobile xcvr
fer chrissake. Off to the landfill with it!

It's replacement:

http://www.sk3bg.se/contest/download.htm

Grab Fastenow's freebie UTCClock file and load it, can't miss.

>The newer computers actually seem to keep worse time than the older
ones

I wuz in the McDade Mall parking lot doing some Xmas sorts of things a
month ago when I noticed that my $100 wrist clock had died. I was in
no mood to screw around with changing the battery so I popped into the
K-Mart to pick up any cheap crapper watch which would get me thru the
holidays. Found one. JA-made analog quartz movement, water resistant,
time and date, and except for the ten cent strap it's a very solid
readable no-nonsense watch and it's dual-clibrated, 12/24 hours.
$4.95. That's less than a battery costs for my "good" watch. Ponder
that. I bought two of 'em.

I set watch #2 five hours ahead of our local time, bingo, UTC
time/date without a computer or the mains. I'll use it when I'm on the
air and not using the 'puter. About a month later both my $4.95 K-Mart
wrist clocks are 2-3 seconds ahead. A P5 is not gonna QSL because any
of my clocks are three seconds off??

The BA issue of QST really was a bit much. You tube-huggers need to
nag the ARRL into launching another of their specialized magazines
like the NCJ and QEX so that you people can wallow in yer ARC-5s and

DX-60s without loading QST with it.

Not an issue. When the 'puter clock here is noticeably off time vs.
WWV I simply ping NIST and let them reset it. My tax dollars at work.
YMMV.

I wanted a callsign that said something about me, not just a number with a random group of letters. It's also easier for others (and me on bad days) to remember. Anyway, as Dee noted, it's fairly easy to spot a vanity call once you know what to look for.

Luckily, we have fewer "vulgar" body parts to worry about. Men have chests too, but that somehow escaped being vulgar. As my wife would say, perhaps because men mostly decided what is vulgar over the years. As a result, chests with protrusions are vulgar (with special little names like "tits"), while those without protrusions are not.

Dave, why does your communication present itself in font format? Are
you using a Gootenburg press?

Precisely. But, I generally don't give second thoughts to the age, origination, or type of call someone has... Dwight shared that his is a vanity callsign. I think his choice is neat, but haven't been inspired to "lookup" someone's call to glean information about it.

But, good information...

Only Dave Heil could see a direct response to a statement as a "dodge."
Hilarious...

>
>Flexible as in yours to choose to adhere to at your own
>convenience........

I don't think anyone is allowed to be "flexible." In the USA all
amateurs must adhere to a Rigid, Inflexible Way Of Amateur Life.
Dave tells everyone what connotes "flexiblity." [very little]

Rubber is a flexible substance. We cannot use rubber. Rubber is
a vulgar and tacky term, one of many not allowed in ham raddio.

Ergo, "flexibility" is not allowed. All must remain Rigid, Inflexible.

Ooops..."rigid" is a vulgar and tacky term. Cancel "rigid."

No one can "erect" an antenna either, let alone "raise it up."
Vulgar. Tacky. Tasteless.

>One more thing: Resolve to learn the Morse code and to use it on the air.
>Decide from the start that you are going to be a proficient CW operator, and
>don't give in to any of the frustrations normally associated with learning to
>use this uniquely practical, effective, efficient, and universal
>communications mode.

Absolutely! Morse code is at the heart and soul of U.S. amateur radio!

Morse is so #$%^!!! good that every other radio service continues to use it for communications! [Larry thinks...without having any experience in any of them]

Without proficiency in morse code, amateurs are not really amateurs.

Those who cannot do morse code or care to do morse code are not recipients of Larrah's Blessings.

>We have all experienced them, and people from all walks of life have
>overcome them and become proficient CW operators.

Vital, important, mandatory for amateur radio.

Forget everything else and concentrate solely on morse code.

That is all that is needed to be a "good" amateur.

>It's not that big a deal,
>and the only problems you'll have achieving success are those you make
>for yourself.

Yes, failure to become proficient in morse code will result in a continuing repost of Larrah's skills, nobility, and accomplishments in the field of radio communications... resulting in endless peans of self-praise for his unswerving loyalty to the Beliefs of Hiram.

See the hoops. Jump through the hoops, Larrah. That's a good boy!

Sit.

>
>Um, one doesn't have to be a professional hockey player to appreciate
>the talent of a Wayne Gretzky, do they?

Big Dave has a curious set of "qualifications" on almost
everything.

For example, Dave thinks "interest in radio" is manifest by learning
and using morse code. He will accept NO other "interest," not
even those who got into electronics and radio as a professional
career.

If Big Dave thinks something is "tasteless and tacky," then ALL
must think so...or be judged inferior, themselves without taste
or morals.

Big Dave's standard of excellence in everything is Big Dave. He
sets himself up as the Role Model in all things. There shall be
No Variation. Everything prim and proper, sexless in fact.

Big Dave isn't into electronic homebrewing. If he was, he would
have to handle "nuts" and "screws" and other [expletive deleted]
fasteners. He couldn't bear to think of using a "screw driver" or
a wire cutter ("dikes" - yikes). Insulated wire cannot be
"stripped." Such is tasteless and tacky.

Hiram forbid that any of his equipment pops fuses. He
couldn't bear to think of "blowing" a fuse! [that's tasteless and
tacky, if not obscene]

LOL!! My wife, who seldom makes any comment on anything pretaining to amature radio, just walked into the room, looked over my shoulder and upon seeing kim's call sign displayed in the newsgroup header said, "who would be issued a call sign like that?" After explaining it was a vanity call sign and the person requested it, her comment was, "what kind of idiot would ever choose such a call sign?"
I ask her if she thought it was vulgar. "Not really vulgar, just suggestive and totally lacking in taste, I suppose some people have to get attention anyway they can".

A heart felt thank you to all that replied.

I guess my opinion that "Amateur Radio Service is not an essential element in our society" was incorrect. I appreciate all that took the time to show me where I was wrong. I stand corrected.

Re-reading my origanal post, I seem to have come off as a bit of an idiot. I think maybe I should have taken things a little slower.

And once again, thanks for the gerat advice.

Not at all, Scott. There was absolutely nothing wrong with any of
your comments or the way that you said them. Anyone new tends to be
viewed somewhat suspciously in this group - until their intentions are
clear. No big deal!

The unsociable amateurs that you met at the club are the idiots!

In fact, it's good for some of the long time hams here to see what the
views and impressions are of those who are new to the amateur radio -
it shows where improvements are needed to generate more interest in
the hobby. Your club, for example, could use someone in charge of
meeting with new members or visitors and introducing them around -
making them feel welcome.
>
>And once again, thanks for the gerat advice.
>
Keep asking questions, Scott! When you get on the air for the first
time, you will meet lots of hams who will patiently guide you through
the mechanics of communicating with them - that's where the real fun
(and learning) begins! An example:

My first QSO on HF was with an informal net on 40 meters that I had
been listening to for a few days - and learning how it worked.
Finally, I got up the courage to push the button and say "Contact"
(like I'd heard the others do). The net controller invited me to call
in, I identified myself and told them that this was my first HF
contact since I passed my Morse Code test - and was promptly welcomed
in personally by over 20 other hams, several over 1000 miles away!
Best contact that I have ever had, and the friendliest bunch of people
that I have ever met. Still talk to most of them whenever I have the
chance.

Good luck, and have fun!

73, Leo

"Vulgar" works for me. From the Random House College Dictionary:
"vulgar adj. 1. characterized by ignorance of or lack of good breeding
or taste; unrefined; crude.

I also like "tacky" and "tasteless". There have been a number of other
words used to describe it.

> I don't see the link between tacky and vulgar. Dave - please clarify!

I have.

In essence, "Leo", that is your point, that Jim should avoid hurting
Kim's feelings by not using her call, the call that he finds
objectionable.

> >> >> >> - if Kim interprets the intentional omittance of her callsign from

You don't need?

> Sorry to add to the list of things that you don't know.

There are many things unknown to me, "Leo". Not knowing your call, your
location or your name aren't things high on my list.

> > As far as Kim being honked at Jim's refusal to

> all of that goes out the window. LOL!

I use microphones, keyboards and keys on the air, "Leo". I don't don't use any of them in my amateur radio operations to lessen the pleasure of others.

> To the second - you sure have no problem working her here, Dave....:)
> - in front of thousands of fellow amateurs, world wide......

Thousands? I think you vastly overestimate the readership of this newsgroup--and this isn't "on the air", Leo. Usenet isn't amateur radio.

> But it is indeed your prerogative to not work any station that you
> choose not to. Duh.

I don't know what the "Duh" signifies, "Leo". You seemed to have problems understanding my lack of obligation to use Kim's vulgar callsign. Nothing requires me to use it anywhere.

> >> That must be one of those 'flexible' standards, huh?
> >
> >You may operate or not operate. You may respond to a call by a station

> >> That must be one of those 'flexible' standards, huh?
>
> Flexible as in yours to choose to adhere to at your own
> convenience........

Let's see. I don't approve of Kim's callsign here. I don't approve of Kim's callsign on the air. I wouldn't approve of Kim's callsign on a car license plate. I wouldn't approve of Kim's callsign on a cap. What

you'd like to do is take an item from Paul Segal's code, an item which is very specific and change it to suit your argument. It can't be done. It very clearly says "operates". Now I'm quite confident that "operates" doesn't mean "operates heavy equipment", "operates a computer connected to the internet", "operates a convenience store" or "operates on a patient".

You persist in calling my views inconsiderate. I don't agree. I've considered. Now you're a "Leo"-come-lately so you've apparently not been exposed to Kim's views on proper social behavior. If you like, you can hit the Google archives and check them out. I happen to view Kim's choice of callsigns as inconsiderate toward the whole of amateur radio. It is simply another in a series on Kim's part, in which she thumbs her nose at the world.

Given a choice between voicing disapproval and the *wink* and *chuckle*,
your choice has been obvious.

> >> others. Plain and simple.
>
> Do you disagree with this concept, Dave?

Yes, I'll have to disagree with it. "Bill" is a good neighbor. "Pete" lives on the other side of me. "Pete" has a dog which he allows to roam freely. "Pete" refuses to control the dog and laughs when I tell him that I object to his dog's use of my lawn for a toilet.

"Bill" asks if he can borrow my lawn mower. I lend it to him. A month later, "Pete" asks if he might borrow the mower. I tell him "no". I've not treated these individuals equally. It is my view that I'm not bound to do so.

Get real, "Leo".

> get attention anyway they can".
>

You, your wife, Larry Roll, my good friends here in this area who enjoy the fun of my callsign--anyone--has the right to believe and think as they do; and the opinion of my callsign is an absolutely correct one--for each and everyone who has one.

And, for me, and those who either think nothing of my callsign, think it's fun, wouldn't have selected it but don't see it is a main distraction, we are just as correct.

Your wife, JJ, probably also has the opinion that people who dance for a living; who are in magazines like Hustler, Playboy and Playgirl; who lead a risque life, etc., are all "totally lacking in taste." I don't and I am certainly not in any minority.

The difference between people like "us" and people like "you" is that we don't expect anyone to live up to anyone else's expectations or standards. I have no problem at all with your opinion, the opinion of Larry Roll, the opinion of your wife. I do, however, take great exception to crossing the line and deciding that it's quite OK for sneering, resorting to desperate

other measures trying to make someone feel embarrassed, etc. Whether you or anyone else realizes it, there are people--such as myself--who have risen way above letting the opinions of others get in the way of living life beautifully. But, it takes a lot of work and self-reflection to get there. And, there are more people who won't ever get there than who are there--and it is for those people that each and every time someone acts like an asshole toward another, I will have no problem mimicking the behavior right back at them.

So, tell your wife that I totally respect her opinion--but that is as far as it goes. I don't "need" the attention of anyone. I am well liked, love people, work every day to help people succeed and make the best of themselves, and pick up in a second for the underdog in any situation. And, I don't know what she thinks I might be suggesting, since it is singly my husband that I love and he needs no suggestion. Do you?

You keep mentioning this "thumbing my nose at the world" Dave. And, you are absolutely correct in that assessment of me. I am probably not able to be pinned into any particular mold. And, sorry you have a problem with that, but the greatest minds and achievers in this world saw through your "mold" concept.

I almost deliberately depart from tradition and mundane ways of doing things. I thoroughly immerse myself in the doings and thoughts of others, and I am truly, truly excited by the potential I see in nearly everyone. I also thoroughly enjoy approaching people like yourself with such vague attitude that you can't help but get offended. That is my mission for you--to offend you. Because at least it breaks up your boring and mundane day...

Part 97 does not assign me any responsibility to ensure that a frenchman is operating inside his frequency allocations, only that I am operating inside mine.

If a frenchman calls me on 6-meters I will certainly answer him since F is a new band-country for me on 6.

With all kind wishes,

de Hans, K0HB

>
>"Vulgar" works for me. From the Random House College Dictionary:
>"vulgar adj. 1. characterized by ignorance of or lack of good breeding
>or taste; unrefined; crude.

That's one meaning, Dave - here are all of 'em:

1. Crudely indecent.

2. Deficient in taste, delicacy, or refinement.
3. Marked by a lack of good breeding; boorish. See Synonyms at common.
4. Offensively excessive in self-display or expenditure; ostentatious:
the huge vulgar houses and cars of the newly rich.
5. Spoken by or expressed in language spoken by the common people;
vernacular: the technical and vulgar names for an animal species.
6. Of or associated with the great masses of people; common.

>
>I also like "tacky" and "tasteless". There have been a number of other
>words used to describe it.

Tacky and tasteless are indeed synonyms - vulgar can be different.
Might just mean 'common'. Or 'ostentatious'.
>
>> I don't see the link between tacky and vulgar. Dave - please clarify!
>
>I have.

Sort of. They can be different concepts.

Tasteless could mean 'inappropriate'.

Vulgar can too, or could mean 'objectionable'. Or something else. Not
all at the same time, though.

Which is it - inappropriate or objectionable? Or ostentatious - I
like that one best :)

>

Nope - my point is that omitting just one call in a list was not the
polite way to handle the situation, Dave. If one feels that strongly
about one "inappropriate' call, then leave 'em all out. Treats
everyone as equals, Dave.

Whew! - that's a relief. I'll sleep better tonight knowing that :)

Seemed important to you earlier, though, Dave - I'm glad that you have
found peace with it.

>
>> > As far as Kim being honked at Jim's refusal to

About what? Callsigns, and their probable hidden "dirty' meanings?
:)

>
>> Perhaps I misinterpreted her objection, Dave - please clarify.
>
>Just tell us how you interpreted it and we'll proceed from there.

Rather obvious, isn't it Dave? Please advise where I went wrong.

Feel free to use this quotation from Kim from the Pool thread when you reply: (helpful hint - she was writing with reference to the deletion of her callsign in the Pool posting....)

"Jim is disrespectful to me to make it look like I am not an amateur when he chooses not to associate me as an amateur when I've made a conscious decision to participate in something he's providing for fun."

Gee, I guess that she was referring to something else.... :)

>

OK, not on the air, then - just here, perhaps. Apparently, the medium determines the standards of appropriate behaviour: no wires, good; wires, bad.

I see.

I'll probably never know, though - I have no desire to work you on the air, as I find your attitude towards others inappropriate for Amateur

Radio :)

>
>> To the second - you sure have no problem working her here, Dave....:)
>> - in front of thousands of fellow amateurs, world wide......
>
>Thousands? I think you vastly overestimate the readership of this
>newsgroup--and this isn't "on the air", Leo. Usenet isn't amateur
>radio.

This Usenet group is carried on thousands of servers all over the
world, Dave. And no, it isn't amateur radio - but I'll bet most of
the readers of this group are amateurs, or are at least interested in
the hobby!

BTW, part of it might be on the air, Dave - a great deal of telecom
backbone networks are carried by microwave or satellite links.. :)

>
>> But it is indeed your prerogative to not work any station that you

>callsign. Nothing requires me to use it anywhere.

OK, don't use it then. It's vulgar to you, perhaps. Not necessarily
to me. It's just a callsign, Dave. Worst case, it's about breasts. So
what - some of my best friends have breasts.

And, duh means duh. Duh. Somewhat synonomous with "obviously...", but
a tad more condescending in common application.
>
>> >> That must be one of those 'flexible' standards, huh?

>"operates" doesn't mean "operates heavy equipment", "operates a computer
>connected to the internet", "operates a convenience store" or "operates
>on a patient".

Say, Dave, you're beginning to sould a bit like Dr. Seuss there!

Dave, would you like W5TIT with that?

I would not, could not, on a cap,
I would not, could not, on RRAP,
I would not have it on a plate,
I would not 'cause I'd hate that plate!
I would not use it on the air,
I would not use it ANYWHERE!!!

I don't care if Katey Segal wrote the code, Dave - I interpret
"operates" in the context of my inference as "communicates to others",
Dave. It's part of the package.

Or does it simply refer to the technical side of operating - that is,
it's OK to treat someone poorly on the air so long as you use
technical accuracy in operating your station? "Sure, I told that jerk
off big time on 40 last night, but my SWR was under 1.1, my intermod
was < 60dB, and my signal was clean with no key clicks!"

And is it any different when you are at the office? "I gave that
moron in Accounting a piece of my mind - we weren't on the air, you
know!"

Or here, for that matter.

>
>You persist in calling my views inconsiderate. I don't agree. I've
>considered. Now you're a "Leo"-come-lately so you've apparently not
>been exposed to Kim's views on proper social behavior. If you like, you

>choice of callsigns as inconsiderate toward the whole of amateur radio.
>It is simply another in a series on Kim's part, in which she thumbs her
>nose at the world.

I see. I'm confused, though - are you saying that the callsign is
vulgar? Or the holder of the callsign? Please clarify.

You are aware that there are a whole pile of vanity calls out there
which are much more explicit than this one - it must be challenging
screening them all out before deciding to talk to 'em on the air,
Dave. 'Cause they might mean something 'bad'. In many different
languages, too!

Maybe you should hire an admin assistant for your shack!

No, you certainly are not.

One question, though... did you put up posters all over the
neighbourhood to let everyone know what a jerk you thought Pete is?
Do you tell everyone that you meet that he is an inconsiderate boor?
Do you go to the mall with a bucket of the dog droppings and tell
everyone within earshot how wrong Pete is?

That would be OK to do, you know - you and Pete are not on the air!
:)

No, you don't. The code says what it says. You are attempting a
stretch.
You're also attempting to use that code to state that it is improper for
me to voice disapproval over Kim's choice here or to ignore her on the
air because of that disapproval. You're attempting to use that code to
tell Jim that he should either use Kim's call or not use any calls. Is
that about it?

> I'll probably never know, though - I have no desire to work you on the

Read some of Kim's view on what she views as proper social behavior and decide for yourself. Interesting material will include Kim's idea of proper behavior at a football game, cocktail party or when driving. You might also find Kim's comments to W4NTI, K3LT, W0EX, "JJ" or me to be of interest.

> You are aware that there are a whole pile of vanity calls out there

I'm aware that there are other objectionable vanity calls. None of those individuals have made any posts here in the seven or eight years I've been here.

> Maybe you should hire an admin assistant for your shack!

Naw, most of my extra funds go to that engineer I keep on retainer.

That's *three* questions, "Leo".

I've never brought up Kim's inappropriate call on the air. Both "Bill"
and "Pete" are hypotheticals.

> That would be OK to do, you know - you and Pete are not on the air!
> :)

Hypothetical Pete isn't a ham. He never heard of the Amateur's Code? I didn't lessen his operating pleasure.

I don't have a vague attitude, Kim. Most folks with any brain cells can
determine my attitude without difficulty.

> That is my mission for
> you--to offend you. Because at least it breaks up your boring and mundane
> day...

Well, there you have it. I hope "Leo" is paying attention.

Maybe. Did you know that the B&P boilerplate was only added in 1951?

To me, the B&P is essentially a sort of expectation of what FCC wants the ARS to be doing "as a whole". Doesn't mean any particular ham has to do it, but that
if we as a group don't do those things, eventually there will be no need for an ARS
to exist.
>
>>[snip] Hans is right - take away the public service aspect, and the ARS'

Source record: 85778

Alternative Universe Probable Truisms -

1. There would be NO ARRL to provide "guidance" and direction. That expired before St. Hiram expired. [in this alternative universe] Newington, CT, would have no museum.

2. There would be NO morse code test since no other radio service except Maritime Radio used morse code. There would be NO need to keep a "pool of trained morse radio operators" for any national need.

3. There would be NO tales of olde-tyme ham doings because there would be no old-timers left to tell the tales...only pretenders who longed for a simpler (mythical) life way back before they were born.

4. The Titanic would have sunk anyway and several movies made about that tragedy. "Independence Day" would have been made anyway as a comic science-fiction vehicle for Will Smith who would later wear black suits and shades.

5. Hallicrafters and National Radio and Heathkit would have gone belly-up anyway. Collins Radio would have continued on into the military and commercial radio market without making any overpriced fancy amateur radios. Yaesu, Kenwood, Icom would still have been successful in the commercial and government market. SGC might still exist but in the personal sailing market. Ten-Tec might not exist.

6. Radio broadcasting would have become successful and tele-vision broadcasting even more so. "Overseas radiotelephone" would still exist via the first HF SSB radios in the 1930s. The first VHF FM mobiles would still be tested by various police departments in the late 1930s. The military would still be the first HT user courtesy of Galvin (later Motorola)...and the back-pack radio ("walkie-talkie" again from Galvin)...and the radio relay (WW2) and VHF repeater (Korean War) uses...and single-channel HF SSB (USAF, post WW2)...and aircraft VHF AM (WW2). HF RTTY circuits would have been formed before WW2 and continued on in wide-bandwidth HF SSB, later to have much higher data rates from transferrence of modem and information theory techniques. Cross-country microwave radio relay would still exist for hundreds of telephone circuits and many TV circuits on a single link. Government and business would still have tens of thousands of HT and mobile radios courtesy of the military WW2 legacy and the invention of

transistors and integrated circuits. Communications satellites would still exist as soon as rockets could put them up there (first published paper on that by an up-coming science fiction writer named Arthur C. Clarke, then a "boffin" in the RAF right after WW2). All sorts of watercraft would have VHF radios in harbors due to the success of small land VHF radios. Radio-sondes by the hundreds of thousands would be used up annually using simple one-tube (pencil triode in a sheet metal cavity) transmitters in low microwave frequencies. The cellular telephone (past legal age in our universe) would still exist by the millions, morphed into a single-hand package with built-in video capability. There would still be "headphone radio" receivers for personal use, sometimes merged with CD players. "Wireless" would take on a new meaning as hundreds of thousands of data transceivers linked computers without wires. "Shortwave" broadcasting would still be trying out digital sound and finding out that it works despite dire warnings of impossibility. The U.S. military would still be using digital VHF manpack radios with encryption for voice and data for a total of a quarter million sets. None of the preceding required any "ham radio pioneering."

7. Arthur Godfrey would still get his TV show cancelled. Barry Goldwater would still unsuccessfully run for U.S. President. [the fate of Julius LaRosa is unknown in this universe]

8. The Federal Communications Commission would still exist on approximately the same scale and still trying to privatize commercial operator testing to save money. Radio use by non-hams after 1934 grew sufficiently large to require the agency to continue.

9. "CB" would have been created anyway, a fore-runner of the license-free personal radio wave of the future. [it is 46 years old in our universe which already has FRS, R-C, cordless telephones and wireless gizmos of all kinds]

10. Tens of thousands of electronic/radio hobbyists would be bereft of Title, Status, Privilege of the Royal-equivalent. Amateur Radio License that allowed them to add a callsign behind their names to show how good and expert they were in "radio." That would make it a bitter scene with many more fights of the amateurs (minority) with professionals (majority).

In article <100l868d2j48j6a@corp.supernews.com>, "Scott"
<scott5mi@cox-internet.com> writes:

>A heart felt thank you to all that replied.
>
>I guess my opinion that "Amateur Radio Service is not an essential element
>in our society" was incorrect. I appreciate all that took the time to show
>me where I was wrong. I stand corrected.

Only in THIS venue, Scott.

In THIS venue, all the pro-code newsgroupies require all to think,
act, do, behave, and moralize as they do.

To them, amateur radio is NOT a hobby, not a normal recreation.

It is a Way of Life. Comes complete with a rigid moral code.

Pro-coders RULE amateur radio (in here).

All who deviate from an inflexible code of ethics established in 1928
shall be punished (in here) by contant, unremitting pejorative
pummeling by the pro-coders for even daring to say one unkind
word about the Sacred Olde Ways of amateurdom.

Not only are they rigid and inflexible while marching in unified ranks,
they are generally without humor since they are near-absolute
literalists who demand (if not dictate) all following their Orders.

I've been trying to get a word in on the SUBJECT of morse code
testing and have been a constant target of character assassination
by these pro-code newsgroupies. No "civil debate" possible in that
cacophony of code.

Never mind that I got into big-time HF communications at a young
age (much more so than any other in here) and that led to a
career choice of electronics engineering (a decided major change
in education).

No matter. Heil says that is not enough "interest in radio," I must
learn morse code and become an amateur (NOT a professional) to
"show interest in radio."

The resident gunnery nurse spits on professionalism AND night
classes in EE, arming his slingshot with slimy spit and trying to
get down and give him 20 for talking against "superiors." Weird.

An olde-tymer of 48 going on 84 who lives in the past keeps
saying I am always "mistaken" and "incorrect" in another ploy of
perverse character assassination.

This is NOT anywhere close to a venue for "discussion of issues"
in amateur radio. It is a place for newsgroupies to gather and try
to turn into some kind of ARRL-south, to stir stock myths and
old ideas into a stew of meaty morse just like what HAD to be
done in the 1920s and 1930s.

Rigid, inflexible, all march to the same drumbeep.

>Re-reading my origanal post, I seem to have come off as a bit of an idiot. I
>think maybe I should have taken things a little slower.

No. I don't agree.

If any "error" was committed it was merely in underestimating the
vehemence of the pro-code Life Stylers, the worshippers of the
Church of St. Hiram, the Believers who take all their Life Guidance
from a single membership organization.

In Their view of ham radio, They say what "fun" is in The Service.

>And once again, thanks for the gerat advice.

Amateur radio is an interesting, fascinating hobby, a recreational
pursuit involving an intriguing technology.

I'm coming up on my 51st anniversary of putting a 1 KW transmitter
on the air trans-Pacific. Radio and electronics is still fascinating
to me and I've explored a lot of it in the course of a half century.
Been in lots more of the EM spectrum than nearly all of these
rigid pure moralists in here. Never used morse code in all that time,
never had to. Used many more modes and modulations than are
allowed to amateurs. That's not enough!

According to all the pro-code newsgroupies in here, none of that is
"good enough for them." All must do as they did, learn morse code
and pass a morse test, for "morse code gets through when nothing
else will" (expletive deleted).

There can be NO talk or even a hint about changing the morse code
test regulation. Morse code testing MUST remain in the USA for
all radio amateurs. That is the only way to "real" U.S. ham radio.
Those who do not follow the dictates of the moral majority of
pro-code newsgroupies shall be banished from human society!

If the pro-coders had to do it, by darn, EVERYONE has to!

That's what it boils down to...a battle of newsgroup wills.

Those who haven't made out their "will" properly are to be
destroyed. [by any means possible...]

Hang in there, Scott. Pander to the would-be "authority wanna-bes"
if you have to...but GO YOUR OWN WAY. Be your own man, not
a puppet of those who dictate what you can do, what you shall
enjoy, what you must do to please them.

Independent thought is GOOD!

Leonard H. Anderson
retired (from regular hours) electronic engineer person

Morse code TESTING involves GETTING INTO amateur radio in
the United States.

Since Big Dave has been in amateur radio sooooo long, He has
no business trying to dictate what constitutes GETTING INTO
amateur radio, does He?

Big Dave is very confused (He really needs his monocle prescription
changed). Times have changed. OLD laws aren't applicable any
more. There is NO need to have any morse code test for GETTING
INTO amateur radio.

Big Dave wants to DICTATE who should do what and where.

Dictatorial behavior is not civil.

Dictatorial behavior is that of despots and would-be authorities.

Big Dave is not an authority.

Dictatorial behavior is uncivil, perverse, vulgar, tasteless and tacky.

[let it dry long enough and it won't be tacky...]

>Why, Little Leonard, I am certainly a part of amateur radio. You
>aren't.

Yes, Big Dave, you are certainly a part of the despotic dictatorship
trying to keep everything just the way it was when you jumped
through the hoops.

Inflexible. Unable to bend with the times.

Big Dave tries to create the impression of an Authority Figure. At
best all he can do is press his prussian uniform and impress by
image. Image, not substance.

All Big Dave can do in "discussing" the morse code test issue is
mouth off badness against those against the test. Attempts at
character assassination are his only "discussion" tools.

Very "civil" behavior for a despot, a dictator...in their vulgar,
tasteless, and tacky way.

Is that what happens when amateurs become olde-tymers in
hamme raddio? Not a nice hobby in that case...

>Please continue with your civil debate of the elimination of morse
>testing.

Why?

There will be NO discussion of any issues.

All there is is a lot of personal pejoratives thrown at the no-code-
test-advocates. Pro-code-test-advocates do not seem to have
any valid arguments in favor of retention. All the pro-coders can
do is trot out a lot of standard boilerplate phrasing that boils down
to "olde-tymers had to test for morse so everyone has to!"

Not a good argument.

>> >> >"Bill" asks if he can borrow my lawn mower. I lend it to him. A month
>> >> >later, "Pete" asks if he might borrow the mower. I tell him "no". I've
>> >> >not treated these individuals equally. It is my view that I'm not bound
>> >> >to do so.
>> >>
>> >> No, you certainly are not.
>> >
>> >Then what about your comments about folks deserving equal treatment?
>>
>> Dave, you are jumping to confusions here :)
>>
>> My next paragraph focusses on this statement further:
>>
>> >
>> >> One question, though... did you put up posters all over the
>> >> neighbourhood to let everyone know what a jerk you thought Pete is?

>> Do you tell everyone that you meet that he is an inconsiderate boor?
>> Do you go to the mall with a bucket of the dog droppings and tell
>> everyone within earshot how wrong Pete is?
>
>That's *three* questions, "Leo".

Oh - you're right! Thanks, "Dave" :)

Care to answer them?

>
>I've never brought up Kim's inappropriate call on the air. Both "Bill"
>and "Pete" are hypotheticals.

Oh - I forgot - real life is different than on the air. You only need
to act in a friendly and courteous manner when you are on the air,
right? Not here, for example. Who could possibly be listening here?

Got it.

>
>> That would be OK to do, you know - you and Pete are not on the air!
>> :)
>
>Hypothetical Pete isn't a ham. He never heard of the Amateur's Code? I
>didn't lessen his operating pleasure.

This is funny. Maybe he has a hypothetical Extra ticket? Maybe he's
just ignoring you on the air cause you hate his hypothetical dog,
Dave.

But Hey, you didn't answer any of my questions yet, Dave! Bummer!

Betcha thought I wouldn't notice, huh?

BTW, speaking of questions, you accidentally cut one of my questions
out of your reply, Dave - just to help out, I listed it below.
preceeded by your comments:

Regarding:

Full figured women dealing with fallout as a fact of life...

Dave said:

Given a choice between voicing disapproval and the *wink* and
chuckle, your choice has been obvious.

And Leo asked:

Really - what were you thinking of, Dave? Tsk, tsk.

BTW, I can do a "smiley" OK, but what is the graphic symbol for a
"chuckle"?? And doesn't a "wink" have a semicolon in it, like this ;)
?

LOL.

>
>Dave K8MN

Dave, you're a funny guy! Please be careful not to step in any of the
hypothetical dog poop next time you cut your lawn!

And next time you see Hypo Pete, tell him that Leo says he should
think about moving to a new neighbourhood!

73, Leo

1108. Amateur Radio Newsline™ Report 1379 – January 16, 2004

Newsgroup: rec.radio.amateur.policy
Date: 2004-01-18 21:35:11 UTC
From: radionews@aol.com
Message-ID: <20040118163511.23011.00000268@mb-m04.aol.com>
Source record: 85785

Amateur Radio Newsline™ Report 1379 – January 16, 2004

The following is a closed circuit advisory for Amateur Radio Newsline bulletin stations. It is not necessarily for broadcast.

According to Support Fund Administrator Andy Jarema, N6TCQ, Amateur Radio Newsline has only received enough funding of late to keep the service going for another month or so. In other words, the bills from last November have been paid , but now money has to be raised to keep from loosing the phones and e-mail service from bills accrued in December.

Andy says that Newsline continues to exist hand to mouth on a week to week basis. He says that It is up to you and the listeners to make sure that it is funded so that it can continue to provide this vital service. Otherwise he may soon be forced to pull the plug.

Please help us to keep The Amateur Radio Newsline on the air. Our address is the Amateur Radio Newsline Support Fund, Post Office Box 660937 in Arcadia California. The Zipcode is 91066. Again and as always, we thank you.

That ends the closed circuit advisory with Amateur Radio Newsline report number 1379 with a release date of Friday, January 16, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. The ARRL Board meets to discuss the future of ham radio and lots of news on the B-P-L front. Find out the details on Amateur Radio Newsline report number 1379 coming
your way right now.

RESTRUCTURING: ARRL BOD MEETS IN CT JAN 16-17 TO DISCUSS WRC-03

Look for some major changes in the structure of the United States Amateur Radio service to be proposed or at least put open to study. This as the American Radio Relay Leagues Board of Directors holds its first annual meeting of 2004 as this newscast goes to air. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, reports:

--

What’s to come under the ARRL Board of Directors scrutiny? The ARRL Letter points to the big item being the implementation of changes in US Amateur Radio rules. This, in the wake of World Radiocommunication Conference of 2003.

Among other significant changes, W-R-C 03 delegates agreed last summer to leave up to individual countries whether to require a Morse code test for access to

amateur high-frequency allocations. Several nations have already dropped the code testing requirement for High Frequency access. In the United States, the FCC last year invited public comments on 14 Morse-related petitions for rule making, but it has not yet acted on the issue. When it meets, the ARRL Board is expected to discuss in detail recommendations in response to W-R-C 03 that were developed during last November's meeting of the ARRL Executive Committee.

Most observers generally believe that there will not be any major action by the FCC to implement W-R-C 03 changes until it hears from the League. This Board meeting is expected to generate an ARRL position that will be transmitted to the regulatory agency, but you will have to wait until the meeting is over and the League issues its own statement to find out what that position is. We suggest you keep an eye on www.arrl.org the next few days for any breaking news on ARRL Board decisions.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ, in New Jersey.

--

Among other actions, the Board also will elect members to the Executive Committee and appoint three directors to the ARRL Foundation Board. The Board also will elect officers for the next two years. Incumbent President Jim Haynie, W5JBP, has indicated that he plans to run for a third term. (ARRL Letter, others)

**

RESTRUCTURING: IARU REGION 1 TO MEET IN FEB

Meantime the International Amateur Radio Union will be holding its next regional conference in a few weeks. Q-News Graham Kemp, VK4BB, is here with that story:

--

The Twelfth Regional Conference Is being held from February 16 - 20, 2004 in Taipei, Taiwan. There are Working Groups, where most if not all the business is discussed and these run parallel to one another. A wealth of information is exchanged on the floor at these Working Groups.

There are formal discussion times and of course many informal discussions and gatherings such as over meals and receptions and so on. Contacts made at these conferences assist when an issue comes up back home, help can be sought on a first name basis.

There will be workshops on two important topics. The first is a Workshop on WRC 2003. It will include a detailed discussion on the new Article 25. To facilitate the discussion, a paper by Michael Owen VK3KI is being circulated with the Conference papers so that all societies will be able to make an advance study and brief their delegation on issues to raise and matters for seeking clarification.

The other Workshop will be on The Society's IARU Liaison Officer. The Workshop will help gain a better appreciation of the duties and responsibilities of the

Liaison Officer and hopefully lead to greater satisfaction from the work carried out by Liaison Officers.

Graham Kemp, VK4BB, reporting.
--

More information on this upcoming conference can be found on-line at the Japan Amateur Radio Leagues website at www.jarl.or.jp/iaru-r3 (Q-News)

**

THE BPL FIGHT: AUSTRIA TURNS OFF ITS BPL

And a big win overseas on the B-P-L front as reported by the ARRL Letter. The Austrian Amateur Transmitter Federation says that a Broadband over Power Line field test in the city of Linz has been cut short as a result of excessive radio interference. According to the national ham radio society, the Government Ministry for Commerce, Innovation and Technology closed down Linz Power Company's B-P-L pilot project because it was generating interference on the HF bands.

Shortwave broadcaster Radio Austria says the case that brought the issue to a head was a Red Cross report. One that documented that emergency services radio traffic during a disaster response drill last May was the victim of massive B-P-L interference. According to the broadcaster, measurements were said to have indicated that radiation from the B-P-L system exceeded permissible field strength levels by a factor of 10,000.

Last fall, Linz amateurs and their national leaders got together with power company representatives in an effort to resolve BPL's incompatibility with High Frequency ham radio operation. The meetings followed news reports of interference to emergency service communications and QRM complaints from several area hams.

The Commerce Ministry Order not only means the end of the Linz B-P-L pilot project. It also perminently curtails any future the deployment of this technology in Austria. (ARRL)

THE BPL FIGHT: PANASONIC TO INTRODUCE HOME BPL SYSTEM

A form of Broadband Over Powerline may be coming to a house near you. This as Matsushita Electric announces that it has developed a high-speed home power line IP networking technology capable of high-definition video transmission.

Amateur Radio Newsline’s Bruce Tennant, K6PZW has more:

--

Best known for its Panasonic-brand products, a newly developed Matsushita Electric technology will make it possible to provide broadband connectivity to every room in a house via existing home power lines. This, using an Panasonic branded adapter about the size of an audiocassette that the company says cannot be interfere with by radio amateurs.

The adapter contains a power plug, power supply, LAN connector and an L-S-I chipset that converts broadband data into signals that can travel over a power line. The unit connects a broadband Internet link such as D-S-L or optical fiber lines to the existing power lines in the home. According to Panasonic, a user simply plugs the P-L-C adapter into any AC power outlet to create a home broadband networking without installing new cabling.

The most interersting claim being made by Panasonic is that the new technology it calls H-D P-L-C resists interference from other signals such as those from ham radio that the company says often use the same frequencies as wired communications. In order to realize this capability, Panasonic claims that it combined Orthogonal Frequency Division Multiplexing and Wavelet technology to reduce the noise caused by the interference down to one-fifth of typical noise levels. This the company says creates a proprietary interference-resistant and ultra-high-speed modulation-demodulation method without use of additional filter circuitry that eliminates the frequencies where interference is likely to occur. What impact that this new technology will have on over-the-air radio reception by hams and other spectrum users is not addressed.

Panasonic expects to introduce P-L-C adapters for both consumer and office use by the end of 2004 providing that the HomePlug Powerline Alliance determines a final specification in the summer of 2004. An L-S-I chipset will also become commercially available at the same time.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

Matsushita Electric and its Panasonic subsidiary exhibited this new Powerline Communications technology at 2004 International CES held last week in Las Vegas. Both companies are members of the HomePlug Alliance which has been working with the ARRL to notch out amateur frequencies from its powerline communications signals. (ARNewsline(tm), CQ -- from news releases)

**

THE BPL FIGHT: W1RFI SPEAKS IN PA

Meantime, one of the leading experts in the area of Broadband Over Powerline interference has made his thoughts known. Speaking at Frankford Radio Club meeting on in Philadelphia last Tuesday night, Ed Hare, W1RFI, said that B-P-L is not good news for the radio spectrum. Amateur Radio Newsline’s Mark Abramovich, N-T-3-V, was there and has this report:

--

When Ed Hare talks, amateurs and others listen.

During an hour-long presentation at the FRC's meeting on the University of Sciences campus here in Philadelphia, Hare made the case that Broadband Over Power Lines is a threat to the future of the hobby.

"If these B-P-L systems came to my neighborhood, HF Amateur Radio as I know it would be over," he explains. "I mean S-9 on multiple bands would seriously cripple me.

Oh, we've had more serious threats when Amateur Radio was shut down after the world wars, but this ranks up there with it in terms of the potential to cause harm to the types of Amateur Radio that many of us enjoy doing."

The reason: Hare says B-P-L field tests by a handful of electric utilities use power line systems to carry high-frequency or HF signals to homes and businesses to give them connections to the internet.

"My neighbor's computer system is a local interference problem," he says. "I'm not going to hear the one three blocks up the street.

But Broadband over Power Line, they're going to intentially conduct those signals onto the overhead lines that will run through my house and then they're going to build this as big as an entire neighborhood. Clearly it has a different interference potential."

Hare says he's charted the interference on 20-meters, calculating it on a national and worldwide scale should B-P-L be rolled out.

"The ability of HF to sustain worldwide communication if you have 30-microvolts per meter of noise will not exist," Hare says.

He says the interference potential goes beyond the ham bands.

"This will affect military spectrum, this will affect international broadcasting spectrum, this will affect other government spectrum," Hare says. "This will affect commercial HF spectrum and as I tune outside the ham bands, you know what? That's not a radio wasteland, there's a lot of stuff there."

And, Hare notes, there's serious concern about medical-diagnostic devices.

"I go to my doctor's office, it's a house in a residential neighborhood," Hare says. "And he's going to hook me up to the E-K-G machine to find out whether I'm going to die before the end of the day. And, if that thing's interfered with, maybe I'll get a false positive or a false negative."

Finally, Hare says the amateur community is not alone.

"I'm very pleased to see groups like FEMA, NTIA and others getting involved with this saying essentially the same things ARRL is doing based on their work," Hare says.

"They, too, see a serious inteference potential to HF that needs to be addressed before B-P-L could ever be considered in any way."

For Amateur Radio Newsline, I'm Mark Abramowicz NT3V in Philadelphia.

--

More on the fight to stop B-P-L in future Amateur Radio Newsline reports. (ARNewsline(tm))

**

RESCUE RADIO: NIUE DEVASTATION REPORTED BY HAM RADIO

From the rescue radio file, word that radio amateurs became a lifeline when tropical cyclone Heta ripped through the tiny island republic of Niue two weeks ago. The storm left the tropical paradise with no regular means of communicating with the outside world and summoning much needed relief aid. Enter ham radio.

According to news reports, a radio operator on the island put out a a call for help which was answered by Steve McCully, W7TZ/ZF2CQ, in the California community of Oak Hills. In fact, it was McCully who phoned the New Zealand Consul General in Los Angeles and provided that government with its first notification that Niue had been ravaged by 186 mile per hour winds.

More is on-line at http://www.vvdailypress.com/cgi-bin/newspro/viewnews.cgi?newsid1073499379, 43275, http://www.alertnet.org/thenews/newsdesk/SYD184348.htm and http://www.lonelyplanet.com/destinations/pacific/niue/ (CGC, WA6MCL)

**

RADIO ALLOCATIONS: RULES FOR 5.9 GHZ INTELLIGENT TRANSPORTATION ADOPTED

The FCC has adopted service and licensing rules for the 5.9 GHz Band for Dedicated Short Range Communications or D-S-R-C. This, from 5.850 to 5.925 Ghz in the Intelligent Transportation Systems Radio Service.

According to the Commission, DSRC systems will provide a limited-range, wireless link to transfer information between vehicles traveling at high speeds and roadside units or other vehicles. Some examples include intersection collision avoidance, work zone warnings, road condition warnings, electronic toll collections, and electronic payment for gas, fast food, or parking.

More is on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-242309A1.doc (CGC)

**

ENFORCEMENT: 10 METERS NON-HAMS IN THE SOUTH PACIFIC

Three new non ham radio intruders to the 10 meter band have been monitored down-under by Wayne Featherstone VK4ZRT. All appear to be Asian in location and all operate the A3E mode at around 0700 U-T-C. Listen for them on 28.215, 28.225 decimal 25 and on 28.285 Mhz. (Q-News)

**

ENFORCEMENT: $5.4 MILLION DOLLAR FAX FINE

Some good news for anyone who is sick and tired of getting unsolicited junk faxes. Federal regulators approved a record $5.4 million fine against a company for faxing unsolicited
advertisements to consumers.

The five-member commission unanimously approved the penalty on Wednesday, December 31st but did not announce its decision until Monday, January 5th. The FCC said Fax.com accrued the penalty because it violated the rules 489 separate times incurring an $11,000 fine for each instance. In affirming the fine the commission rejected arguments from Fax.com that the ban on unsolicited faxes was unconstitutional and that the fine was excessive.

The Federal Communications Commission said the fine given to Fax.com, Inc. was the largest ever for violating do-not-fax rules that went into effect in 1992. Fax.com sends faxes on behalf of clients that pay a fee. Its website claims that the company offers the industry's largest fax number database of more than 30 million numbers. Company officials did not immediately respond to a requests from the media for comment. (FCC)

**

COMMUNICATIONS LAW: BLAME THE COMPUTER

Prosecutors looking to throw the book at accused computer hackers have come across a legal defense. In four words, “the computer did it.” And in this era of hijacked PCs and laptops, jury’s are believing it.

In one case in the U-K, nineteen year old Aaron Caffrey was recently acquitted on charges of hacking into the computer system of the Houston Pilots back in 2001. Houston Pilots is an independent contractor for the Port of Houston.

Caffrey had been charged with breaking into the system and crippling the server that provides scheduling information for all ships entering the world's sixth-largest port. Although authorities traced the hack back to Caffrey's computer, he claimed that someone must have remotely planted a "trojan program" onto it. That it was the trojan and not him that did the hacking. (Published reports)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAMFESTS AND CONVENTIONS: THE 44TH MIAMI TROPICAL HAMBOREE

Turning to the hamfest and convention scene, the 2004 season really kicks off the weekend of February 7th and 8th. This, when the doors of the Miami Dade County Fair Expo Center in Florida swing open to welcome the 44th Tropical

Hamboree.

This years Hamboree has a long list of great programs with speakers that include such notables as ARRL President Haynie W5JPB, FCC chief rules enforcer Riley Hollingsworth K4ZDH, IARU President Larry Price W4RA, CQ Communications' Rich Moseson W2VU and Radio School's Gordon West WB6NOA. They will take part in a free form round-table discussion of the future of the Amateur Radio service. Moseson and West will later join Florida’s own Sherri Bower, W4STB, in the conventions Public Relations Forum.

Attendees will also get to hear the latest DXpedition Adventures presented by South Florida DX Association and learn about Amateur Radio at the National Hurricane Center. There will be lots of vendors and all the other niceties that make the Miami Tropical Hamboree a must attend on the convention circuit. The event is sponsored by the Dade Radio Club of Miami, Inc. More information is on-line at www.hamboree.org (Tropical Hamboree)

**

HAMFESTS AND CONVENTIONS: CHARLOTTE COUNTY HAMFEST

Meantime, March 6th is the date for the Charlotte County Hamfest in Englewood, Minnesota. Sponsored by the Englewood Amateur Radio Society, the event will feature swap tables, tailgating and overnight hookups for those bringing a recreational vehicle. The venue is the Charlotte County Fairgrounds and you can find out more in cyberspace at www.earsradioclub.org (Worldradio)

**

HAM RADIO IN SPACE: AIR LEAK ON ISS LEADS TO CONTACT CANCELLATION

A small air leak on board the International Space Station forced cancellation of the Monday, January 12th scheduled contact with the Armstrong Middle School in Flint, Michigan. The I-S-S recently began experiencing the slight loss of air pressure, which the crew had to locate and repair. This meant that they had to devote all their time to resolving this issue using special ultrasonic monitoring. The leak was located and repaired late the same day. Contacts missed are in the process of being rescheduled. (ARISS)

**

HAM RADIO IN SPACE: UPDATE ON OPERATIONS FROM ARISS

We also have an update on what’s happening with the new radio gear on board the International Space Station and why hams on the ground heard un proto packets for a while. Amateur Radio Newsline’s David Black, KB4KCH, is here with the details:

--
Frank Bauer, KA3HDO, is the Chairman of ARISS. Amateur Radio on the International Space Station. And Bauer says that he has been sifting through the many e-mails he has received over the past few days regarding ham radio operations from the orbiting outpost.

Bauer says that the new Kenwood D 700 radio recently delivered to the ISS is still in what he terms as its "raw" form. In other words, the ARISS team has not yet run a formal engineering checkout of the new hardware and the ISS crew has not gotten the operations procedures uplinked to them.

According to Bauer, at this point in time the Kenwood radio system is not properly configured for digital operations. A reconfiguration change occurred after it was brought on line which has led to this issue. So, what hams see in the way of packets coming from the station right now will probably not be what they will see in the future.

As to the signal fading problem Bauer says that its probably due to the antenna that’s currently in use. The astro-hams are now using the new antenna system located on the Service Module and is a single, bottom mounted unit. Since the structure of ISS is very large, it is quite possible that the ham radio signals are getting some blockage.

Bauer says that ARISS will continue to evaluate the antenna system performance. He notes that there are now 4 antenna systems that can support 2 meter and 70 cm operation. This says Bauer gives a lot of possibilities with the antennas, including signal splitting, if need be.

As to the packet signals heard during a recent school contact? Those who heard it heard history being made. The first ever multiple radio operations from the International Space Station. While the older Ericsson radio system was doing the school contact, the new Kenwood radio system was active doing packet. It was also -- perhaps -- the first man made Q-R-M from space.

For the Amateur Radio Newsline, I’m David Black, KB4KCH

--

Bauer says that the astro-hams kind of surprised everyone on the ground by getting the radio system installed much earlier than they had anticipated. As a result, the Amateur Radio on the International Spasce Station team has been working feverishly with the space agencies to get the procedures uplinked and engineering checkouts scheduled. (ARISS)

**

INTERNATIONAL - INDIA: HAM RADIO AT THE CHILDREN’S SCIENCE CONGRESS

On the international scene, ham radio was a part of India’s 11th National Children Science Congress. Organized by the an educational group in the city of Lucknow the event ran from the 27th to the 31st December with more than 2000 students, teachers and science promoters from various parts of that nation taking part.

According to VU2DCT, Lucknow hams were also called by program organizers to give the demonstration on Amateur Radio for the benefit of participants. Most of attendees were astonished to listen a live QSO between VU2WAP and a ham in Columbia, South America. During their presentation the hams emphasized the role of Amateur Radio in disaster situations. (Q-News)

**

INTERNATIONAL - SOUTH KOREA: HOMEGROWN SOFTWARE IS BEST

South Korea is considering requiring mobile phone operators to use locally developed software for downloading music and games. According to news reports, that nations Information and Communication Ministry is pushing for the compulsory use of in-country developed software for downloading on new mobile phones in order to standardize the wireless Internet platform.

South Korea is Asia's third largest mobile market and one of the fastest-growing wireless Internet markets. As of the beginning of 2004 there are 33.44 million mobile phone subscribers, or about 70 percent of the country's 48 million population. (Science Today)

**

DX

In D-X, word that the Five Star DX’ers Association has announced plans for a very large-scale DXpedition to Rodrigues Island in March and April next year. The callsign will be 3B9C. An international team of nearly 30 will operate no fewer than 15 separate stations will take to the air on virtually every band and mode possible. The Five Star DX’ers Association is the same group that organized the very successful operation from the Spratly Islands in 1998 and the subsequent record breaking D68C DXpedition to the Comoros in February 2001. (IRTS)

Also, word that DJ4KW and D-K-9-G-G will be active from Belize until the end of February. Callsigns being used are V31YN on CW and V31GW on RTTY. Activity is on 160 through 10 meters. Please QSL as directed on the air. (OPDX)

And for those of you who perfer your D-X and D-X awards a bit higher in frequency, Peter Heins, N6ZE says that he will be able to conduct VUCC field checking in Springfield, Massachusettes several times during the next few weeks. You must be a current ARRL member to avail yourself of this service. Those wanting to take advantage of Pete’s offer should e-mail him as soon as possible to n6ze@aol.com (N6ZE)

**

THAT FINAL ITEM: THE POTTY MOUTH AND THE VURGER

And finally this weeek, customers at a Troy, Michigan Burger King are getting something extra with their orders that’s a little harder to swallow than a hamburger and fries. And its coming by radio. Rick Johnson, KA9VZD, is here with a complete menu on this one:

--
The Detroit News is reporting that police in nearby Troy are looking for the person who has found a way to broadcast on the same frequency as a local Burger King drive-through radio system. The jammer has interrupted business transactions with obscene remarks on several occasions that have startled customers.

The most recent incident took place on January 8th. It happened when the manager went outside to apologize to customers and look for the source of the

salty talk. Suddenly a voice boomed from the speaker and said -- quote: “There’s nothing you or the police can do about this, so get your fat -- err -- lets say posterior -- take your fat posterior back inside and take your goons with you.”

Police suspect the calls are being made by a mobile radio transmitter or walkie-talkie in the vacinity of the restaurant. Illegal use of any telecommunications device is a misdemeanor in the city of Troy. And as we all know, its also a serious violation of Federal law.

Heading out the door for some fast food, I’m Rick Johnson, KA9VZD, reporting for the Amateur Radio Newsline.

Hey -- can you make that a double cheeseburger and a double order of rings. Yeah and hold the mayo....

--

Sounds as if the story made Rick a bit hungry. And oh yes. Troy police say that they have the FCC for assistance to track down this all beef potty-mouth with a mustard laced tongue. (ARNewsline(tm) from vasrious sources)

it is refreshing to see that there are other issues which command your
attention, Dave - but this statement refers to the issue being
discussed, Dave. All of the text that follows that statement,
actually.

Sorry I forgot the colon at the end of the sentence - I'll try to
remember it for you next time!

>
>I have a nice life, thanks.

Idyllic, in fact, save for a lawn full of hypothetical dog
droppings....glad to hear it!

Because it's obvious, Dave. Like jumping up in a crowded movie
theater and exclaiming "Hey! I'm in a movie theater!"

See also "duh!"

Similar to "No (expletive deleted) !" (which is, unfortunately, more
than you can say for your hypothetical lawn!)

>>
>> Sort of. They can be different concepts.
>
>I've used a number of terms. I meant all of them.

Dictionaries are funny things, Dave - kinda like restaurant menus.
When you are provided with multiple choices (or definitions, in the
case of the dictionary), it is indeed unusual to choose 'all of them'.

But, hey go for it - you really hate that callsign, right! After all,
it's a Big Issue!

Pick 'em all.
>
>> Tasteless could mean 'inappropriate'.
>

>It surely could.

Absolutely. It could mean a Big Mac, too.

>
>> Vulgar can too, or could mean 'objectionable'. Or something else. Not

Just asking...you provided me with a whole whack of definitions, I was
just trying to see which one fir best!

>
>> Which is it - inappropriate or objectionable? Or ostentatious - I
>> like that one best :)
>
>"Inappropriate" and "objectionable" are both fine with me.

Well, you're the first one to step up and call it objectionable - good
for you.

Now if you can just find some way to convince the Government that you
should be the successor to Mr. Powell, you could impose that belief
upon the FCC, and actually do something about it!

Until then, it's OK. Nice and legal. Like all of the others.

>

I'm suggesting that blathering your negative opinion of Kim, and her
callsign, in a public forum is boorish behaviour, Dave. (say, that
would be vulgar behaviour, from the definition of vulgar, wouldn't
it?)

I'm attempting to draw a parallel between the standards of good
behaviour and conduct detailed in that code to the real world, Dave.
You know, being a good neighbour and citizen and stuff.

I'm so glad I could help to clear that one up for you.

>

>That's silly, "Leo".

I thought so too, "Dave"! Except for my definition of "operates" -
that is. That one's a good one.

>Are you telepathic? Can you read the thoughts I'm
>sending your way at this moment?

Yes. You are wondering where you left your garage door opener.

It's on the table next to the stairs, Dave. Right next to your keys.

<receiving transmission>

You're welcome, Dave.

>
>> Or does it simply refer to the technical side of operating - that is,

>
>I didn't write anything about telling Kim off on the air. Does your
>interpretation make any sense to you?

That's quite the fixation that you have on Kim, Dave. Probably
unhealthy, too.

No, everything does not center on Kim.

Sure does. It questions how you interpret the concept of 'operating',
as stated in the code. From a technical or human interaction
perspective, or both.

>
>> And is it any different when you are at the office? "I gave that
>> moron in Accounting a piece of my mind - we weren't on the air, you

>
>I dunno, "Leo". Is the moron in accounting even a ham? Did you lessen
>his operating pleasure?

That's silly, Dave.

For the purposes of this question, it's your office - please answer
the question. (hint: it's a hypothetical office).

Or, simplified for you, do you feel that you only have to act in a
civil manner on the air - and nowhere else?

Or - It's OK for someone to be an Amateur Extra on the air, and Alpha
Hotel anywhere else?

Say it ain't so, Joe! Say it ain't so! (that's a reference to
Shoeless Joe, Dave - not Joe the amateur - or Kim)

>
>> Or here, for that matter.
>
>Has Kim's operating pleaure been lessened? Has yours?

In this group - yes, she stated something to that effect.

Mine - naw.

Not by you!

>
>> >You persist in calling my views inconsiderate. I don't agree. I've

>interest.

I did not start out discussing all of the issues that you point out,
Dave. When I wrote to Jim, he explained that it was only the callsign
that he had an issue with, and not the individual. That is why my
discussion focusses on the callsign issue only.

You sound like you find more than just the callsign vulgar, though -
sorry I can't help you with that! That ain't my issue.

Like I said earlier, if you want to discuss a different issue, start a
new thread.

>

73, Leo

PS - are you using the two new Q-signals yet?

QKS (as a question) - Please do not send Kim's callsign. Please?
QKS (as a reply) - OK, I will not send Kim's callsign.

LOL!

Well he's right.

That's why Sam Morse invented the code - because he had an interest in radio.

In article <bueb59$1b0@library1.airnews.net>, "Kim W5TIT" <kimscliff@yahoo.com>
writes:

>The difference between people like "us" and people like "you" is that we
>don't expect anyone to live up to anyone else's expectations or standards.

Kim:

That's right, because living up to other people's expectations or standards
is what normal, intelligent, polite, and socially acceptable people do. You
have given more than adequate evidence to the fact that you are none of
the above.

>I have no problem at all with your opinion, the opinion of Larry Roll, the
>opinion of your wife.

Which is where you fall down, Kim. Anyone with a conscience would
care very much what people like JJ, Mrs. JJ, and I think of them.

>I do, however, take great exception to crossing the
>line and deciding that it's quite OK for sneering, resorting to desperate
>other measures trying to make someone feel embarrassed, etc. Whether you or
>anyone else realizes it, there are people--such as myself--who have risen
>way above letting the opinions of others get in the way of living life
>beautifully.

I would hardly refer to what Riley Hollingsworth so elequently stated as
bringing the ARS "...one step closer to extinction" as "living life
beautifully."
That is the perverted construct of an equally perverted mind.

>But, it takes a lot of work and self-reflection to get there.

I don't think the request of a sexually-suggestive and clearly offensive
amateur radio callsign requires much work or self-reflection. All it requires
is a bad attitude and a willingness to cheapen one's self and all other
amateur radio operators -- particularly YL's. Obviously you are up to that
particular challenge, but it doesn't reflect anything positive about your
personality or character.

>And, there are more people who won't ever get there than who are there--and
>it is for those people that each and every time someone acts like an asshole
>toward another, I will have no problem mimicking the behavior right back at
>them.

On the contrary, Kim, I'd say that you have behaving like an asshole down
to an art.

>So, tell your wife that I totally respect her opinion--but that is as far as
>it goes.

JJ's XYL doesn't require your respect, and I'm sure she doesn't expect it.
Moreover, the fact that you offer it may even offend her.

>I don't "need" the attention of anyone.

In spite of all of the evidence to the contrary.

>I am well liked, love
>people, work every day to help people succeed and make the best of
>themselves, and pick up in a second for the underdog in any situation.

And I'm sure all of this exists primarily in your own mind. It would be
very interesting to have a private conversation with your close acquaintences
and co-workers. I'm sure that they would be quite ready to paint an entirely
different picture of one Kim Walker, W5TIT.

>And,
>I don't know what she thinks I might be suggesting, since it is singly my
>husband that I love and he needs no suggestion. Do you?

All I can say is, your husband is either a saint, or a wretchedly desperate
person who can not do any better than to be involved with a totally self-
absorbed, selfish, and inconsiderate person such as you appear to be.
After all, even after having your choice of a call sign condemned by one
of the FCC's top officials, you still refuse to "take the hint" and change it
to something more acceptable. Therefore, one can only draw the
conclusion that you think that you are a law onto yourself, and that you
have every right to do as you please, when you please -- even if it means
giving an unfavorable image to 750,000-plus U.S. radio amateurs. And
the fact that you have done so willingly and by your own request only
makes you look all the worse.

You mean women who pose naked with legs spread wide? Yes she does and I
do as well.

> I don't

Why does that not supprise me?

> The difference between people like "us" and people like "you" is that we
> don't expect anyone to live up to anyone else's expectations or standards.

People like "us" have standards, whereas you obviously don't have any
standards to live up to.

> I have no problem at all with your opinion, the opinion of Larry Roll, the
> opinion of your wife. I do, however, take great exception to crossing the

People who do such things would be embarrased if they had any taste,
class or standards.

> Whether you or
> anyone else realizes it, there are people--such as myself--who have risen

Larry, this a major problem with our society today, people like kim who
don't care what anyone else thinks. Just as long as they can do whatever
they want and get what they want.

>
> JJ's XYL doesn't require your respect, and I'm sure she doesn't expect it.

People of kim's status, never seem to "take the hint", it completely
escapes them.

My wife's consistent response to the ongoing debate about Kim's callsign is, "who cares?" In short, with all the things going on in the world today, she thinks it is absolutely amazing that so many would waste time discussing a trivial issue like this.

Since the TIME of the examination is not recorded on the CSCE, it is not
possible nor relevent to determine the expiration of a CSCE to the nearest
second.

A blatant lie from someone who finds it easy to lie.

> I've been trying to get a word in on the SUBJECT of morse code
> testing and have been a constant target of character assassination
> by these pro-code newsgroupies. No "civil debate" possible in that
> cacophony of code.

Another lie. The subject has been "debated", discussed and
dissected until all are nauseous of the topic anymore.

That Lennie has nothing else to discuss as it pertains to Amateur
Radio should be a clue to those new to this forum that would be swayed
by his "debating style".

You've taken grand liberty with the term "literary license" and
have grossly abused any sense of social propriety so many times that
your name is synonomous with "liar" and "antagonist".

That is NOT "civil debate".

> No matter. Heil says that is not enough "interest in radio," I must
> learn morse code and become an amateur (NOT a professional) to
> "show interest in radio."

AMATEUR Radio, Lennie...You have exactly zero-point-zero minutes
of experience in AMATEUR Radio. No one, repeat NO one in this forum
denies that the technology and propagation of radio waves is any
different in any other radio service.

It's the PRACTICE and the APPLICATION of the technology that
makes the difference.

> The resident gunnery nurse spits on professionalism AND night
> classes in EE, arming his slingshot with slimy spit and trying to
> get down and give him 20 for talking against "superiors." Weird.

The "wierd" one here is someone who enters a forum for which he
has expressed absolutely NO interest in being an active part of then
trying to tell those who ARE involved how to go about thier business.

And I do not spit on "professionalism" Lennie.

That assertion is yet ANOTHER lie from somone whio finds it EASY
to lie. I have nothing but the highest regard for professionals in ANY
field...It's just that I have absolutely ZERO respect for YOU since
you've made such a mockery of the title.

> An olde-tymer of 48 going on 84 who lives in the past keeps
> saying I am always "mistaken" and "incorrect" in another ploy of
> perverse character assassination.

Well, Lennie, if you weren't always "mistaken" or "incorrect", I
wouldn't have any room to maneuver, now would I?

As for "going on 84", I will gladly jog around the block a few
times with you or see how well you do carrying a full field pack on
the rescue team. NOW who is involved in another "ploy of pervase
character assassination"...?!?!

> This is NOT anywhere close to a venue for "discussion of issues"
> in amateur radio. It is a place for newsgroupies to gather and try
> to turn into some kind of ARRL-south, to stir stock myths and
> old ideas into a stew of meaty morse just like what HAD to be
> done in the 1920s and 1930s.

Since YOU seem to be the only one who deems it important to
interject arguments about Morse Code into threads that don't even
adress it, I'd say the fixation is yours, Oh Putzy One.

> Rigid, inflexible, all march to the same drumbeep.

That's what YOU would have us doing...One license...everyone the
same...no challenge, skill or functionality...Just a corral of lambs,
beying to the Word of Lennie the Professional.

> I'm coming up on my 51st anniversary of putting a 1 KW transmitter
> on the air trans-Pacific.

It wasn't YOUR station, Lennie...It was a facility of the United
States Army. They could have just as easily made you a diesel
mechanic...Perhaps then you would have been harrassing the
professional truck drivers.

Army manuals and a Senior NCO told you what to do and how to do
it. They gave you an FM or TM (or the equivelent of the period) and
said "do this".

Biggie wow. We are soooooooooo impressed that YOU were able to
follow instructions "putting a 1KW transmitter on the air
trans-Pacific".

> Radio and electronics is still fascinating
> to me and I've explored a lot of it in the course of a half century.
> Been in lots more of the EM spectrum than nearly all of these
> rigid pure moralists in here. Never used morse code in all that time,
> never had to. Used many more modes and modulations than are
> allowed to amateurs. That's not enough!

Your "exploration" has been as a paid employee, never being
allowed to use the "radio" as AMATEURS use thiers.

That you never used Morse Code is not germane. Millions of other
radio users never use it either. So what?

> Hang in there, Scott. Pander to the would-be "authority wanna-bes"
> if you have to...but GO YOUR OWN WAY. Be your own man, not
> a puppet of those who dictate what you can do, what you shall
> enjoy, what you must do to please them.
>
> Independent thought is GOOD!

Independent thought IS good, as long as it is LENNIE'S
independent thought. The "regulars" of this forum are, for the most
part, life long Amateur Radio operators with the experience in AMATEUR
RADIO to know of which they speak.

> Leonard H. Anderson
> retired (from regular hours) electronic engineer person

Leonard H. Anderson, retired from regular hours engineer, is a
known pathological liar and newsgroup antagonist.

That he felt compelled to post this "defense" of HIS "career" in
this forum without having actually been a part of the thread is only
further evidence of his own self-appreciating, "me first" personality
and his total arrogance towards the very CONCEPT of Amateur Radio and
those who praticipate in it.

This forum, as YOU have pointed out, Lennie, is about AMATEUR
RADIO...

NOT PLMRS...

NOT military communications...

NOT EMS, Fire or Public Safety...

NOT Broadcast....

That OTHER "radio services" have discontinued it's regular use is
NOT germane to AMATEUR RADIO, Lennie.

And just for the PUBLIC RECORD, Lennie, PLEASE educate the
non-Amateur Radio (or recently joining this forum) public as to how
long YOU have been a licensed Amateur, what programs and organizations
you belong to, and what you have accomplished IN and FOR AMATEUR
RADIO, Lennie...

I am sure they will be as equally impressed with your Amateur
Radio experiences and credentials as WE are...

Please...go ahead...tell us....

Steve, K4YZ

Actually, Dwight, the only "place" that my callsign gets so much discussion
is right here in this newsgroup. I have been involved in a lot of stuff
since I've had this callsign--on the air, off the air, women and men, served
agencies, hundreds of other amateurs. No where, once, did my callsign ever
get discussed, and there was plenty of opportunity.

I am a in-your-face kind of person. It's obvious there's folks in this
newsgroup who can't handle that. My callsign is but one aspect of my
character and personality--both of which are unquestionable in matters that
count. I have that opinion of myself because I believe in myself due to the

encouragement, respect, appreciation, thoughtfulness and even admiration of people in my life and all around my life.

Oh, wait, there was *one* time when I got an email from a club president who made a comment to the negative about my callsign--*after* I'd withdrawn as a member for pointing out that he was not abiding by club bylaws and would not even discuss the matter. He'd had no problem with me, my rabble rousing, or my money and time donations for two years previous...

Did any of you work the "Principality of Sealand" a few years back? (1SL
prefix)

http://hamgallery.com/qsl/Unverified/s1ad.htm

Pretty interesting story and kinda fun to watch the debate on eHAm and QRZ
rekindled a few years back. (Although it was the first time I'd ever heard
of it.) One camp refused to recognize them as a sovereign entity (Mostly
British) while the other camp's motto was WFWL. (Work First Worry Later) The
British govt. actually forbid their licensees to contact TPoS.

Good for you, Hans! I hope to join you some day! I remember some time
ago two different friends of mine telling me that ICOM sold almost 10
times as many IC-781s as they had forecast when it was being designed.
Both were in a position to know -- one was a former ICOM National
Service Manager and the other was the owner of a large amateur radio
store.

Excuse me, JJ. When did a lack of conformity become a "major problem" in this country? Our forefathers, with their relatively strange political and social ideas, were hardly conformists.

KEWL!

Of course there are also clocks an watches that "listen" to WWVB
and reset themselves as needed.

> > But my Tymeter grinds on, flipping the drums.
>
> . . groan . . !

It works! The battery-operated clock above it in the pictures (you
saw my shack pix, I presume) is the backup and local timekeeper.
The Tymeter just keeps doing its job. Simple technology - watta
concept.

Every so often I tune in WWV on the '342 just for a check. Usually
the Tymeter is dead on.

Did I ever show ya the pix of my trip to Boulder NIST and Fort
Collins?
A few years back - got shots of the then-standard atomic clocks and
the transmitter site. Plus me standing by the transmitter site sign.

From: N2EY@AOL.COM
Message-ID: <c2356669.0401191008.a3c8376@posting.google.com>
Source record: 85917

http://www.arrl.org/news/stories/2004/01/19/1/?nc=1

Summary:

3 classes of license: Novice, General, Extra

5 wpm code test retained for Extra only

Existing Advanceds get free upgrade to Extra, Techs
and Tech Pluses get free upgrade to General

'Phone image subbands for 80/40/15 widened slightly

Old Novice subbands replaced by additional CW/data
and 'phone subbands on 80/40/15. Novices also get
privs on 6, 2, 222, and 440

Novice power level set below that requiring RF exposure
evaluation

Novice test to be 25 questions on "basics", General to be
derived from Tech and General, Extra pretty much as-is.

> 3 classes of license: Novice, General, Extra

Ok, so far so good.

> 5 wpm code test retained for Extra only

I personally would like to see existing Tech, Tech+, and Novice licensees
upgraded to the new Novice ticket. (Tech+ privies.)

> Existing Advanceds get free upgrade to Extra

Sounds reasonable.

> , Techs
> and Tech Pluses get free upgrade to General

Nope.

> 'Phone image subbands for 80/40/15 widened slightly

Depends on one's interpretation of "slightly," I suppose.

> Old Novice subbands replaced by additional CW/data
> and 'phone subbands on 80/40/15. Novices also get
> privs on 6, 2, 222, and 440

Ok.

>
> Existing Advanceds get free upgrade to Extra, ...

That's not an upgrade; that's a downgrade. Advanced class licensees passed the Extra class written exam, and passed a 13 wpm code test. Furthermore, most Advanced class licensees took the older Extra exam -- an exam that's a lot tougher than the current Extra exam.

Possession of the Advanced class license proves that the holder met higher standards than the current crop of Extras.

So thanks, but no thanks. When I want to downgrade, *I* will make that decision.

Just go away, ARRL, and keep your grimy paws off my license.

But the fact is that Amateur Radio DID evolve the way it did, and
you are STILL not a licensee in it. Millions of Americans have had no
problem being involved at one time or another, but you, the
"electronics professional", can't seem to get past the front door.
Some professional.

You are still a pathological liar. That is archived and beyond
your Orwellian desires to rewrite history.

You still spend countelss hours trolling for arguments that you
subsequently try to turn into a defensable "it's character
assassination" rants. Still doesn't work.

In the end, you are still more "outside" radio than a motivated
CBer, and never likely to understand why it is your infinite wisdom is
avoided like the plague.

Sucks to be you, Lennie. Wake up and join humanity before Mrs
Putz has to plant you.

If you thought the "Plan for the 21st Century Ham" by theNCVEC gang of four was lame, wait till you see what the ARRL gang of fifteen is proposing!

A warmed over version of incentive licensing with 3 classes, Novice, General, and Extra.

Novice is still ghetto-ized and renewable until you assume room temperature.

Extra just like today, including 5WPM Morse exam.

General just like today except without Morse.

Yawwwwwwwwwwwwwwnnnnnnnnnnnnnnnnnnnn!!!!!

But there's more.....

A third of a million Tech/Tech+ would get a free pass to General.

All Advanced (currently about 82,000) would get a free pass to Advanced.

That works out to about 60% of todays licensees would get a free pass to the next higher license without testing for that grade.

And while I personally don't support a Morse test for any license, if we must have a Morse test for Extra, then lets make it something 'Extra', not the same old count-the-dots-and-dashes which Novices have been passing for over a half-century! 20WPM sounds about right.

C'mon, BoD, this looks like something cobbled together in a committee-of-fifteen-tired-old-men-afraid-they-won't-be-reelected, not the National Association of Amateur Radio with leadership and a vision for the future.

Nasty letter to follow.

Love always,

Dear Little Billy Beeper,

Does Captain Code know you're working us here? (Go to
http://www.handiham.org/local/blind/beeper.txt for details.)

I will not go out of my band allocation to work anyone, but I will work
anyone with an amateur radio callsign who calls me inside my band
allocations.

With all kind wishes,

de Hans, K0HB

ARRL comes up with a new idea.

http://www.arrl.org/news/stories/2004/01/19/1/?nc=1

No code Techs get free upgrade to General.

Newbies get 100W on HF phone via 25 multiple-guess test.

CW (5 WPM) only required for Extra Class.

CW/data sub bands shrink.

Still too hard? Hey, just wait another year. They'll make it even easier.

Art Harris, N2AH
Extra Class since 1971

The _only_ merit to that is that testing was free for Novices, so it would reintroduce a free licence class. Provided the new class that happened to be called Novice had Tech Plus privileges and they had to pass the current Element 2 I would have no trouble with that

>
> 5 wpm code test retained for Extra only
>

Predictably, I do have a problem with that. Morse skill testing for voice privileges is illogical and should be dumped. Moreover, it can be now, since it has not been required by the ITU for the last six months.

Sounds awful. Luckily, I think the FCC will just abolish Element 1, tidy up
a few loose ends, and leave it at that. Not a perfect licence system, but
better than the league's version.

That makes more sense to me, Alun - I don't see why the ARRL would
propose moving almost 400,000 people to a higher licence class just
because the ITU made morse code testing optional.

Incorrect!

> Advanced class licensees
> passed the Extra class written exam,

No, they did not. There have always been different written exams
for the two license classes. Until the 2000 restructuring, an Extra
required passing both the 50 question Advanced written *and* the 40
question Extra.

> and passed a 13 wpm code test.

Only until 1990. After that time, code waivers were available.

Extra required 20 wpm in the same time frame.

> Furthermore, most Advanced class licensees took the older Extra exam

again, incorrect!

> -- an exam that's a lot tougher than the current Extra exam.

No argument there.

It's not that simple.

The proposed Novice would have a lot more HF modes and spectrum than
current Novice/Tech+ - but a lot *less* VHF/UHF.
>
> > Existing Advanceds get free upgrade to Extra

Not at all. The old Novice was only 20-25 questions, back in the
bad old days (before about 1972).

Of course all the old Novice allowed was 80, 40 and 15 CW, plus
145-147 MHz meter CW and AM. And the AM was eliminated about 1967. 75
watts max input, xtal control only.

>http://www.arrl.org/news/stories/2004/01/19/1/?nc=1
>
>Summary:
>
>3 classes of license: Novice, General, Extra

Only the name of "Technician" changed to "Novice" in order to preserve
the lesser class (in the BoD's mind). Otherwise the present regulations
have only THREE classes of new licensees NOW.

>5 wpm code test retained for Extra only

One small step for the BoD, not a giant leap for newbies.

>Existing Advanceds get free upgrade to Extra, Techs
>and Tech Pluses get free upgrade to General

ARRL needs membership revenue...they have to pander to just about
all of the lesser classes! :-)

>'Phone image subbands for 80/40/15 widened slightly

Grudging acceptance of present-day practices. :-)

>Old Novice subbands replaced by additional CW/data

Okay, so the BoD is slowly, painstakingly "advancing" to the
present day. They ought to be about in the 1970s by now.

Hiram forbid that anyone EVER remove the code test requirement!

Such a thing is unheard of! Sacrilege to old T.O.M.!

Now is the time for all the League syncophants to chant and do
their mantra for the "forward-looking League doing its best for what
is best for U.S. amateur radio." They can do no wrong.

Gotta love it!

Only for AMATEUR radio.

There's a MUCH LARGER commercial and military world of radio,
Herr Robust. You've only seen a small part of it while in "the
foreign service."

Let's all hear it for those olde-tyme raddio hammes who've been
in ham radio forever and want to make everyone jump through the
same hoops they had to!

Good luck on that one, now...

>
> Your "exploration" has been as a paid employee, never being
>allowed to use the "radio" as AMATEURS use thiers.

That's the way it is done in professional work. :-)

However, for casual "ragchews," I've used CB...perfectly legal to
do so without any morse knowledge or needing a ham license.

Tsk, tsk, tsk...Stebe, with all the wealth of "engineering
experience" as a paid employee (purchasing agent, less than
half a year total) thinks that "exploration" at work (usuall
known as R&D or Research and Development) is not really any
"exploration." That may be because all of his vaunted amateur
experience has used modes and modulations and equpment
already done? :-)

> That you never used Morse Code is not germane. Millions of other
>radio users never use it either. So what?

Test element 1 is still present in the U.S. amateur radio license examination regulations. That requires demonstration of morse code proficiency.

>> Hang in there, Scott. Pander to the would-be "authority wanna-bes"

>>
>> Independent thought is GOOD!
>
> Independent thought IS good, as long as it is LENNIE'S
>independent thought.

Incorrect. When I said "independent," I meant it in the complete sense, not some inappropriate, semantically-incorrect, emotionally-loaded form by Stebe the wonder marine.

>The "regulars" of this forum are, for the most
>part, life long Amateur Radio operators with the experience in AMATEUR
>RADIO to know of which they speak.

Yes, all must do as those olde-tymers say. They ARE the "amateur community" and run it, morals and all. :-)

All of them got into amateur radio so long ago that only anthropologists can find the applicable radio regulations of their day. :-)

> Leonard H. Anderson, retired from regular hours engineer, is a
>known pathological liar and newsgroup antagonist.

Tsk, tsk, tsk...Stebe froths at the mouth and does the personal-insult bit again. :-)

His rage and anger might qualify as one of the wonders of the world!

Perhaps in Stebe's never-never fantasyland, his "medicine" defines "pathology" as the study of a "disease" and that anyone who does not think as Dr. Killgore thinks is thus suffering a disease? Must be.

Here in the present reality, there are differing OPINIONS, not "lies."

I don't have to lie about anything in my electronics-radio career. It's all open and referencible (except for things covered by industrial trade secrets and non-disclosure agreements). I actually worked IN HF communications beginning nearly 51 years ago...and have been in communications with another member of my Battalion who does have a current amateur radio license. What was done in HF comm a half century ago is still being done today.

> That he felt compelled to post this "defense" of HIS "career" in
>this forum without having actually been a part of the thread is only
>further evidence of his own self-appreciating, "me first" personality
>and his total arrogance towards the very CONCEPT of Amateur Radio and
>those who praticipate in it.

Poor baby. Tripped on his own drool and fell down...pounding on the floor with his fists, unable to get up.

All that rage and anger and hate just from wanting to eliminate the morse code test requirement?

Strange to associate "concept of amateur radio" as being all about morse code testing.

Stebe's alternate reality must be a strange one indeed. Let's not go there.

>
> It wasn't YOUR station, Lennie...It was a facility of the United
>States Army.

Tsk, tsk, tsk...still sore and pished because I had the opportunity
while in my military service yet you did not?

ADA was operating in liason to the Far East Command Hq that
served all U.S. forces in the Far East of the time. Established in
1946 as the 71st Signal Service Battalion, my Army unit operated
(and was entirely responsible for) the primary communications of
the FEC. Yes, it was an ARMY station...the USMC was too small
to handle the task.

However, when the new Income Tax laws were passed to apply to
military service members, I became about as direct a taxpayer as
possible to "own" a part of that station. :-)

[Stebe is guaranteed to pick up on that paragraph and reply to it
with as much vitriol and spite that his few neurons can conjure up]

>They could have just as easily made you a diesel
>mechanic...Perhaps then you would have been harrassing the
>professional truck drivers.

No, the Army could NOT "do that as easily." I was sent to the Fort Monmouth Signal School for several months of microwave radio relay training after Basic. Diesel mechanics were trained in several other school locations.

ADA did have several "diesel mechanics" for the emergency electrical power generation (old site) and continuous electrical power generation (new site at Kashiwa). Normal for 24/7 operation.

Several of the ADA transmitter team were licensed to drive Army vehicles, myself included...Jeep, 3/4 ton truck, 2 1/2 ton truck. No problem since all those already were licensed to drive in the various states and only required familiarization courses on the military vehicles. The Battalion did emply "professional vehicle drivers," all Japanese nationals, but none to my knowledge every "harrassed them."

> Army manuals and a Senior NCO told you what to do and how to do
>it. They gave you an FM or TM (or the equivelent of the period) and
>said "do this".

"FM" is still the common term for Field Manual which covers large subjects. "TM" is still the common term for Technical Manual which goes into specific detail on equipment.

ADA had only one complete copy of the TM on the (standard pre-WW2 design) BC-339 and some reproduced schematics. That was the basic "1 KW" transmitter in RTTY service. The 339 was a sturdy machine and simple to operate, easy to maintain, even if built on "battleship style" (heavy, about 7 feet tall) with many designed-in safety features. Neither the BC-339 nor the BC-340 (10 KW amplifier and power supply for 339) nor the Press Wireless PW-15 (15 KW RTTY) nor the Western Electric LD-T2 (4 KW PEP SSB, commercial) were taught in Army Signal Schools. All of us at ADA learned "on the job" since none of the equipment was taught in any signal schools, any branch.

Yes, "senior NCOs taught us" and said "do this." This is normal in a work environment were supervisors also teach and say "do that." Somehow you find that deplorable?

> Biggie wow. We are sooooooooooo impressed that YOU were able to
>follow instructions "putting a 1KW transmitter on the air
>trans-Pacific".

Considering that none of us newbies at ADA had operated an HF transmitter at 1 KW, there was only the on-the-job-training to do and follow instructions. Took my particular newbie group about an hour of M/Sgt Ouye's time in February, 1953, including questions and answers, and review of procedures for the station.

The BC-339 was about as "complicated" as any amateur radio transmitter got in 1953 (it have been designed before 1940) and

included an antenna tuner. Not a biggie, true, but none of us needed any "license" to operate it nor did we have to know morse code. :-) It is a personal biggie when it hasn't been done before. Keeping everything operating 24/7, knowing procedures for QSYs and confirming frequencies, upping and downing circuits, confirming the TTY signal quality, setting the FSK exciters, doing maintenance on equipment, keeping the radio relay (VHF, UHF) equpment running, keeping the wireline/radio "carrier" equipment running was all part of the job...learned on-site since we could not "go to school" on it nor read about it in QST for an "education." :-)

I learned all that was required (and more) on-the-job and later became an "NCO" who said "do this (or that)." :-)

That was all before Stebe was born. It must make him very angry and furious that anyone actually did those things before his life experience began.

I've omitted any previous mention of Stebe's fury and indignance that I should ever honor the men of my Battalion. He demanded that I stop, saying it was all for personal glory in this newsgroup. Tsk, tsk.

I still honor the men and women of my Battalion, knowing the history from first unit formation to changes through today. I am proud of what I did, of my fellow signalmen for "getting the messages through." We did it. It's on record, including two Presidential Unit Citations. Callsign ADA still exists, now that of U.S. Army Pacific Headquarters at Fort Shafter, Hawaii.

> And I do not spit on "professionalism" Lennie.

Of course you do. Everyone has seen it in this free, open,
unmoderated forum.

You "knew everything about electronics engineering" after working
less than a year as a purchasing agent in a company making
set-top boxes and modems. :-)

You've consistantly tried to equate college night courses with some
kind of alliterative low-grade "night school."

You've consistantly said I was a mere "bench technician" rather
than a design engineer...yet you've never tried to check with any of
the past employers I've listed nor contacted any of the U.S. radio
amateurs I've listed as references.

> That assertion is yet ANOTHER lie from somone whio finds it EASY
>to lie. I have nothing but the highest regard for professionals in ANY
>field...It's just that I have absolutely ZERO respect for YOU since
>you've made such a mockery of the title.

"Mockery?" From the expert Dill Instructor with hardly any work
experience in ANY engineering? :-)

Tsk, tsk, tsk...all you do is vent hatred and bile against another
because that is your nature in here...always insulting the person
who has opinions rather than tackling the subject matter...and,

when there is no possibility of a valid response to the subject, just
more heaping of insults against a person.

> As for "going on 84", I will gladly jog around the block a few
>times with you or see how well you do carrying a full field pack on
>the rescue team. NOW who is involved in another "ploy of pervase
>character assassination"...?!?!

Tsk, tsk, tsk...Stebe reacting as if He were the only one mentioned.

:-)

Unless Stebe moved (again?), He does not live in Pennsylvania
nor is he a renowned amateur historian.

Stebe should pack and rescue his "team" in order to carry more
insults and pejorative phrases to the masses to avenge his
wounded psyche.

>> This is NOT anywhere close to a venue for "discussion of issues"

>
> Since YOU seem to be the only one who deems it important to
>interject arguments about Morse Code into threads that don't even
>adress it, I'd say the fixation is yours, Oh Putzy One.

Absolutely. I interject comments about the beloved smartness of
the morse code test at any opportunity.

Contrary to your personal (weird) beliefs, just getting into U.S.
amateur radio on HF allocations requires a morse test. [see subject
title "A Newbies View On Things"]

Some of us desire to change the amateur regulations and eliminate
the morse code test. Being a "member of the amateur community"
through licensing is not required to change federal laws [see the
U.S. Constitution in regard to who may communicate with their
government].

>> Rigid, inflexible, all march to the same drumbeep.
>
> That's what YOU would have us doing...One license...everyone the
>same...no challenge, skill or functionality...Just a corral of lambs,
>beying to the Word of Lennie the Professional.

Tsk, tsk, tsk. Are lambs kept in "corrals" and do they "bey?" :-)

Tsk, tsk, tsk...once again on the "no challenge, skill or functionality"
by having a single amateur license? That's a mind-boggler but it
does explain Stebe's own claim of "skill and function" represented
solely by an amateur radio class designation.

If "challenge, skill, or functionality (?)" are achieved only by passing a CLASS test, then all Amateur Extras can "stop learning" on receiving that class grant. There's NO "challenge or skill" left for them once that has been done. :-)

All amateur learning STOPS after achieving Extra in Stebe's World.

That explains much of Stebe's output... :-)

Tsk, tsk, tsk, still the unoriginal non-debate non-technique. Such
is beyond trite and worn-out.

Stebe once more indicates intense hatred and rage against one
person. He needs Anger Management Therapy. Immediately.

Opinions not in line with Stebe's Beliefs in his fantasyland are,
in his mind, "lies." Strange stuff.

Unfortunately, there are no dictionaries published on definitions
of Stebe's unreality.

> That Lennie has nothing else to discuss as it pertains to Amateur
>Radio should be a clue to those new to this forum that would be swayed
>by his "debating style".

Tsk, tsk, tsk, still trying that old ploy, senior gunnery nurse?

A reminder: In THIS reality, this newsgroup is open, unmoderated
and there are no raddio kopps at the doorway to check for
proper credentials of amateurism. Stebe is a mighty amateur in
radio...as well as in human society.

> You've taken grand liberty with the term "literary license" and
>have grossly abused any sense of social propriety so many times that
>your name is synonomous with "liar" and "antagonist".

Tsk, tsk, tsk...there you go again, confusing your unreality with the
rest of the world.

No "literary license" is required in here, amateur or professional.
Acknowledging the existance of true reality (as opposed to your
fantasyland) is a requirement for rational discourse. You do not
exhibit rational discourse, therefore you've lost your "license."

Ergo, Stebe is just (vainly) trying to sugar-coat very ordinary
personal insults of the hatred kind. That doesn't work...except
that Stebe is too wrapped up in his personal fantasyland to
acknowledge that others think differently.

> AMATEUR Radio, Lennie...You have exactly zero-point-zero minutes
>of experience in AMATEUR Radio. No one, repeat NO one in this forum
>denies that the technology and propagation of radio waves is any
>different in any other radio service.

Tsk, tsk, tsk...in Stebe's fantasyland, those who want to get into
amateur radio must also "have experience in amateur radio?" That
would make their experience illegal. The FCC would not grant
amateur licenses to those who have done illegal radio operation.

Perhaps's Stebe thinks the amateur radio "service" is like the USMC.
One does not need to know anything as a "recruit." The Dill Sergeant
will explain all to them, spit insults in their faces, give them extra
punishment for misbehavior (such as sassing the Dill Instructor).
All to break them down first, then "rebuild" them into patriotic robots
"for the corps, God, and country."

Amateur radio is a technical hobby, a recreational pursuit (for fun)
that requires licensing due to the nature of transmission of RF
energy. It is not a military service. It is not a government service.

Reminder reprise: This newsgroup is open, unmoderated. No
authoritiy is automatically granted to the enraged, hysterical, or
upset fantasylanders attempting something like squatter's rights.
All they end up doing is squatting.

> It's the PRACTICE and the APPLICATION of the technology that
>makes the difference.

Of course it does, senior amateur gunnery nurse. Simply making
a number of legal regulations and calling it something else changes
the technology into a glorious wonderland of physics that needs
long, arduous study and much time in grade to comprehend. No.

You are exhibiting an erroneous false Belief System again. The nature of RF transmission energy requires (by law) regulation. In the USA this is done (by a law of Congress) through the FCC for civil radio. The FCC grants amateur radio licenses (not the "amateur community"). An FCC-granted amateur radio license is not an academic accreditation, not a diploma, not a certificate of some excellence in radio. A license is just a regulatory tool.

You are wrapping yourself in imaginary glory by winding that license around your personna, falsely puffing up patriotism of a federal license as somehow enobling yourself. You are not "better than non-licensees" for having an amateur license, you are simply authorized by the federal government to transmit certain RF energy at certain frequencies using certain modes and modulations all given in federal regulations.

You WANT (desperately) to be "better than others" for having that federal authorization and become enraged when others do not respect your glorious and noble achievement...forgetting that your other actions as a human being are deplorable, even despicable.

Anyone venturing into this newsgroup is as open and vulnerable to opinion attack as any other. There is no Special Dispensation for the supposed magics of a high license. You cannot negate opposite opinions by using a lot of false insults, acting the outraged bigoted bully, all in insulting the person rather than the subject.

Opposite opinions exist. They do not go away. Physical force and coercion will not stop them. They are not "lies" no matter how many times you call opposite opinions for "lies." In order to remove the self-applied-through-response despicability, you must try to concentrate on the subject, not the person making the opinion statements.

My opinion is that none of the above will have any effect on Stebe. He will continue to vent rage and fury on certain individuals because that is the only tactic available to bullies. But, it needs to be said once in a while... :-)

Dwight, that's all too common in computer-modem "communications," just as it is with morse code beeping on ham band ragchews.

No real clues on a person, no human data input, just a lot of imagination and too much concentration on the writer in a public forum. Those with an agenda, a hatred of something/somebody, living in a quasi-fantasyland, brainwashed into a different reality, are all into their own "reality of sight and sound," just like a Twilight Zone.

To those too caught up in the unreality don't have a hobby of ham radio anymore, they have a Lifestyle and Belief. Any puncturing of that fantasy will send them off into paroxysms of rage, offense at imagined slights, and the usual bigot's demands of What is Right Should Be Right.

U.S. amateur radio seems to be another center for national misogyny. It is a hobby activity engaged in largely by white males.

Pretty similar to Hans's proposal on classes.

> 5 wpm code test retained for Extra only

And so many folks thought they'd push for a higher speed test.

> Existing Advanceds get free upgrade to Extra, Techs
> and Tech Pluses get free upgrade to General

Sounds like something I suggested a couple of weeks
ago that scared a few folks.

There's that stupid pecking order thing again.

Hey, a little studying and a code waiver and anyone could have been an Advanced.

No reason given for it, either. FCC has maintained the old Advanced and
Novice classes for almost 4 years with no problems. There's no reason it would

be a problem for FCC to maintain the Advanced and Tech classes
the same way.

A blank like last time?

Bert, WHY OH WHY couldn't the ARRL have come up with this a decade ago???

The FCC was not only receptive, but even a little pushy about restructuring back then. Instead the ARRL chose to sit on their collective thumbs.

The only thing that doesn't change is the illiterate, self-righteous dolts like you bemoaning the latest change to ham radio.

Been there, heard most of it; SSB replacing AM is a disaster, 11m reassigned to CB is a disaster, license restructuring (in several incantations) is a disaster, elimination of morse testing is a disaster, elimination of essay tests is a disaster...

Fortunately I missed the elimination of spark is a disaster ravings.

On and on you idiots rant and rage, yet the world doesn't end.

Opinionated morons like you is the reason I stopped going to ham clubs 35 years ago.

The real hams are the ones that help people without all the superior attitude crap you constantly spew because your only accomplishment in life is to pass a morse test.

Rave on and continue the name calling moron, I'm back to ignoring you and your life partner's postings.

This proposal is a good start. However, the ultimate goal should be to align our privileges with those of the rest of the amateur radio world and REMOVE all mode restrictions.

CW US operators can operate anywhere in the US bands but US phone is restricted. A clear case of discrimination, and a "mode-ist" one at that!! Politically incorrect these days....and a major waste of sprectrum!! (Just tune the CW bands during any non contest day). A carry over from the olde days when the ARRL was clearly a CW only group of old buzzards.

I submit that US Extra class licencee's should be allowed to operate phone anywhere that the rest of the world can. Is that fair??? Or are we still destined to live in an amateur radio world surpressed by our own government?

Hey...ARRL, WAKE UP!!! If you want to keep the activity up you need to promote frequencies where we can talk to the rest of the world! How can I make this any clearer??? And provide incentives to do this!!! An extra 25KHz doesn't make it.

BTW....requiring CW should not be a requirement for HF operation. (Good move by the ARRL on this with the new Novice proposal) Time to get over it....and let the rest of the many good people get on the air!!! I say this from having slaved over getting 20 WPM done to pass my Extra test (for those measly 25 KHz of phone) and I rarely have used code since. So......don't deny folks from HF just because code is "your favorite mode" and you are proud that you have no microphone in your shack.....

73,
Chuck...K1KW

>>
>> 3 classes of license: Novice, General, Extra
>
>The _only_ merit to that is that testing was free for Novices, so it would
>reintroduce a free licence class.

Not part of the proposal as I read it.

The new Novice would replace the existing Technician class as the entry level
exam. It would have less power and fewer VHF/UHF privileges, but more HF
privileges.

>Provided the new class that happened to
>be called Novice had Tech Plus privileges and they had to pass the current
>Element 2 I would have no trouble with that

Why?

Current Element 2 is very VHF/UHF centric, and so are current Tech Plus privs.
The goal seems to be to strike more of a balance between above and below 30 MHz
privileges.
>
>> 5 wpm code test retained for Extra only
>
>Predictably, I do have a problem with that.

Me too. Should be at least 13 and preferably 20 wpm. Sending and receiving.

>Morse skill testing for voice
>privileges is illogical and should be dumped.

It's no more illogical than testing theory in order to be allowed to use
manufactured equipment.

>Moreover, it can be now,
>since it has not been required by the ITU for the last six months.
>
FCC will most probably just drop it completely.

>> Existing Advanceds get free upgrade to Extra,
>
>OK

Why OK? Why not simply carry the Advanceds as a separate class, as has been
done for the past 3 years and 9 months?
>
>>Techs and Tech Pluses get free upgrade to General
>
>Not OK in this scenario, given my comments above
>
Agreed - but why is it OK for Advanceds to get a free upgrade to Extra, but not
OK for Techs and Tech Pluses to get free upgrade to General?

What is the fundamental difference that makes one freebie OK but not the other?
>>
>> 'Phone image subbands for 80/40/15 widened slightly
>
>Good.

Bad.

> Some phone below 7100? No? Why not?

That space is needed for CW and digital modes.
>
>> Old Novice subbands replaced by additional CW/data
>> and 'phone subbands on 80/40/15. Novices also get
>> privs on 6, 2, 222, and 440

>See above

Please clarify.
>
>> Novice power level set below that requiring RF exposure
>> evaluation
>
>OK

Agreed.

>> Novice test to be 25 questions on "basics",
>
>Not OK

Why not? Current Element 2 is only 35 questions! And it has a lot
more ground to cover, including all amateur VHF/UHF bands and modes,
power up to "meat cooking" levels (love that WK3C phrase) and much more.

By reducing the entry-level privs, 25 questions should be enough.

>> General to be
>> derived from Tech and General, Extra pretty much as-is.

>What do you actually think of this proposal yourself, Jim? You don't say
>here.

See above. A few good ideas and a few bad ideas. Obviously the work of a committee looking to give everyone something they want, but not giving anyone everything they want.

What will FCC do?

First off, they may just go for the "new Novice", in an effort to attract more new hams.

Second, they will probably just dump Element 1.

Third, they will probably not hand out free upgrades because it costs them little or nothing to keep the closed-off classes.

And that's probably about it.

"Silly?" :-) In the eyes of a mighty macho morseman of the amateur bands (HF) who had less than a half year experience in the electronic industry, and whose radio education is derived from the League publishings, I suppose it looks "silly." :-)

No problem for the rest of the radio world. They continued to evolve, grow, advance, and discover things...and make profits on all that... without any assistance from amateur radio.

Broadcasting, telephony (cordless and cellular), teleprinting ("data"), imagery (from facsimile to JPG formats and more), modems (wired and wireless), information theory, AM-FM-PM and composite modulations all grew without any "pioneering" by amateurs.

>> 10. Tens of thousands of electronic/radio hobbyists would be

>you are STILL not a licensee in it. Millions of Americans have had no
>problem being involved at one time or another, but you, the
>"electronics professional", can't seem to get past the front door.
>Some professional.

Tsk, tsk, tsk...I didn't "try" to be a purchasing agent or a truck driver either. Never tried...but I drove a deuce and a half with minimal instruction and legal permission to do so from "authorities."

Professionals make money at their activities...that's why they are called "professional." Amateurs don't...that's why they are called "amateur."

Tsk, tsk...more hypocrisy...you claim you never said anything bad about professionals yet there you go making nasty to pros again.

Sigh...think of the alternative. If I got an amateur radio license I might turn into a bullying barbarian. It wouldn't be nice to have TWO like you in the newsgroup, would it? :-)

> You are still a pathological liar. That is archived and beyond
>your Orwellian desires to rewrite history.

I didn't "rewrite history," Stebe. All the OTHER radio services I wrote about took place in OUR reality, independently, without any help from ARRL or amateur radio.

Everyone knows about AM and FM broadcasting...it's very common source of news and some entertainment. Television is and has more impact than just audio. One in three Americans has a cell phone subscription now (cell phones are little two-way radios!). Most Americans know that communications satellites exist and have seen live video from around the globe (comm sattelites have many little radios in them). AMSAT has their own satellites but didn't invent them.

Commercial communications carriers developed Single Sideband out of equipment used for long-distance wired telephony. Much much later the military sponsored single-channel SSB communications...THEN it became popular for amateur radio.

Mobile and handheld FM radio was "pioneered" by police departments and the military, respectively. In broadcasting, FM popularity is due to the pioneering of Ed Armstrong, the inventor (among many things) of the superheterodyne receiver. The rise in popularity of all is due to the manufacturers of radio equipment, the ones making it affordable.

> You still spend countelss hours trolling for arguments that you
>subsequently try to turn into a defensable "it's character
>assassination" rants. Still doesn't work.

Tsk, tsk, tsk...calling others names like "pathological liar" is rather much like character assassination to most anyone else... :-)

You are right, though, calling folks such names does NOT work well. :-)

> In the end, you are still more "outside" radio than a motivated
>CBer, and never likely to understand why it is your infinite wisdom is
>avoided like the plague.

So...telling the truth of history and experience in radio is NOT true in your alternate reality? :-)

Truth is a "plague?"

If so, may dozens of "plagues" infest your mind with truth!

Might shock the heck out of you to learn truth but you DO have access to sedatives to calm you down...

> Sucks to be you, Lennie. Wake up and join humanity before Mrs
>Putz has to plant you.

There's no "Mrs Putz" living at this address.

I've been a part of humanity for a few decades now and likely to continue
despite running across hate-filled, enraged gunnery nurses who try to
bully others on line.

Trying to insult my wife indirectly is not nice. It's your style but it
still
is not nice and doesn't work very well, does it?

Someone came up with a great analogy today, and I don't know why I've never thought of it before. In fact, maybe y'all won't see this--but I sure do. Relating the callsign I have to the type of person I am, makes as much sense as relating the authorship of Stephen King to him being a mass murderer; or the character of Andy Sipowitz to being the same person as that actor; or Al Pacino being the exact persons he depicts in his characters (remember the tirade he goes off on in the movie "Devil's Advocate").

While amateur radio is not an acting venue, it is a hobby/avocation/distraction/extracurricular activity. The callsign of an individual in amateur radio, and even the way they act within that venue, may have nothing at all to do with who or what they are. In fact, many times when I meet amateurs face-to-face, they are not the person they "depict" on the air.

Anyway, I liked the scenario...that's my story and I'm sticking to it... ;o

Man, I wish I had it...I just looked and I don't. I had intereviewed Riley for a local amateur newsletter and I think the issue of my callsign came up on this newsgroup about a month or two later. I had posted the entire email I'd sent to him, and his entire response. Maybe it can be searched on Google...don't know.

Dan/Bruce:

The ARRL is obviously trying to help itself with their new proposal. I'm convinced that it is their belief that the new proposal serves two critical objectives:

1.) It gives away enough operating privileges to the know-nothing, do-nothing, lazy, no-coder whiners to make them happy,

and, by keeping the 5 WPM code test for Extra,

2.) It hopefully won't offend the likes of the withered, feeble, FISTS-member geezers who are daily trashing the CW subbands with their numbers games and their sloppy, indecipherable sending with mal-adjusted bugs.

Don't expect the "Gang of Fifteen" to be very willing to listen to any of the membership for adjustments to the proposal, particularly the notion of increasing the Extra-class code speed to 12, 13, or 20 WPM.

Jim:

This new ARRL Proposal is pretty much what I would expect to come out of Newington these days. And that doesn't mean that I won't support it. However, I don't see the FCC as being favorably disposed toward adding a new license class to the ARS licensing structure. A better idea would have been to simply incorporate the "New Novice" HF phone privileges with the current Technician-class license, keeping General and Extra as they are in the new proposal.

I don't see why the Extra-class code test requirement needs to be set at the current 5 WPM level. A 12-wpm code test would be a better idea, and anyone interested enough in achieving Extra could go from nothing to that level in a matter of weeks. However, since Extra is already dumbed-down to 5 WPM, I guess there's no putting the toothpaste back in the tube.

Axe and ye shall receive:

Subject: Riley sez Kim taking the ARS "One step closer to extinction"
From: yodoc@aol.comnospam (Larry Roll K3LT)
Date: 08 Jun 2000 14:37:47 GMT

In article <59B7203A07395FF0.50F2CC864D4ED7FE.54A4CB093D32584C@lp.airnews.net>, "Kim W5TIT" <kw5tit@hotmail.com> writes:

>
>Probably more a thoughtful wish of the prefix I wish I'd been able to get.

Kim:

Huh? This was even harder to decipher than your usually indecipherable writing. Anyone who has survived elementary school grammar should know it's best not to use a word like "wish" more than once in a sentence -- particularly if it can be used as either a noun or a verb. This causes confusion. However, since confusion seems to be your normal state, I guess you think you can get away with it!

[THIS IS THE PART WHERE KIM QUOTES THE PART OF RILEY'S E-MAIL WHICH IS THE SUBJECT OF THIS THREAD:]

>Speaking of callsigns, here's Riley's response after I wrote and told him I
>was sorry for bothering him, since the FCC had already spoken on callsigns
>at the Dayton Hamfest (the rest of the email is also with it):
>
>While that's true, just because a person has a right to do something doesn't
>mean it's right to do it on every occasion. While the call sign may fit the
>constitution, for every instance where a parent or uncle or grandparent
>doesn't want a young person to get involved in Ham Radio because of
>something they hear on the bands, then you have taken the ARS one step
>closer to extinction. Then we can sit around and debate what happened to

>all those Amateur frequencies that industry bought at auction---debating, of
>course, on the internet and cellular because that'll be all we have left.
>The first amendment will still be alive and well, just as it is now, tho, if
>that's any consolation.

Interesting. Sooo, Kim -- are you going to change your call sign
voluntarily, or are you going to, as Riley said, continue to take the ARS
"one step closer to extinction?" Think about it!

Years ago, I would have fought tooth and nail to preserve every single
kiloHertz of ham radio spectrum. However, because of the proliferation of
so-called "hams" like you, Kim, I now support the concept of wholesale
re-allocation of amateur radio spectrum to commercial broadcasting
and utility communications services which can make much more
productive, profitable, and socially beneficial use of it! As hams, we've
blown it -- big time -- and you, your attitude, and your callsign are the
best and most readily available example of every bad thing ham radio
has become!

Sooo -- enjoy your callsign. The FCC won't force you to change it --
that is something that can only come from you -- should you decide
to become a Real Ham and stop giving the rest of us a bad image!
I have complete confidence that you can change if you want to -- but
the action to do so must come out of your decision to do what's
right for people other than yourself.

JJ, are you *really* that desperate? No spin at all, I happen to agree with the analogy. If you don't, that's your preference. I happen not to believe that my callsign shows a lack of taste. If you do, that's your preference. Either way, it's my call, I like it, you don't have to, and that's all there is to it.

Now, if it's such an issue for you, to continue looking at it, dealing with it, in any way thinking about it is your choice to stay upset about it. That's your choice too, 'magine dat!

What really amazes me is you folks don't know what the real test is for getting on HF!!!! You have to do it!!! That means really figuring out how to put up the appropriate antenna, tuning it, tuning and running your rig properly, ect. You can get all the answers correct on today's exam and still fail in the real world.

In fact, there have been "hams" here locally that tried for over a year to "get out" and learned more in that process than they ever learned by memorizing today's exam questions.

I submit that these IMPROVEMENTS recommended by the ARRL are a good start and will have more people LEARNING how to get on HF. A GOOD thing. The bands are FAR less busy than they were 30 years ago. Unless we get more people into this great hobby, it's gone...

And to really improve HF operations on ham radio...we must get rid of the archaic mode divisions on each band. I would like to see us have the same privileges as the rest of the world's amateurs enjoy....or are we not good enough???

73,
Chuck...K1KW

Perhaps William *always* checks to see if the DX he works is always in band for that country? ;^) Hopefully he also check to make sure that the domestic Amateurs he works are not Deadbeat Dads (or Moms). All reasons for license revocations.

>restricted.

How much actual CW operation do you hear in the 'phone subbands?

>A clear case of discrimination, and a "mode-ist" one at that!!
>Politically incorrect these days....and a major waste of sprectrum!!

A CW or digital signal uses about 1/10 the spectrum space of a 'phone
signal. The waste of spectrum is in clinging to modes that use so much
spectrum when much narrower options are available.

>(Just
>tune the CW bands during any non contest day).

And?

>A carry over from the olde
>days when the ARRL was clearly a CW only group of old buzzards.

ARRL doesn't make the rules and never has. FCC does.
>
>I submit that US Extra class licencee's should be allowed to operate phone
>anywhere that the rest of the world can. Is that fair???

No. It's not a good idea. Narrow and wide modes don't share spectrum well.

>Or are we still
>destined to live in an amateur radio world surpressed by our own government?

Check out how much of the amateur bands from 160 through 10 is available to
analog 'phone.
>

Yep - only been an Extra for about 34 years.
>
>Many Extra's (me, for an example) never took the Advanced written
>exam, and my Extra exam had 75 questions, not 40.

"Many"?

There were fewer than 5000 Extras in the mid 1960s. Today there are well over
100,000.

And yes, for time, (1953-1967) there was only one written test to go from
General to Extra - because FCC wasn't giving out Advanceds in that time period.

So what you're telling us, Hans, is that you only had to take a single written
test to go from General to Extra, while most of the rest of us had to take two
written tests.

Moral: Pays to get there early.

True indeed. However, it would be interesting to see how much "membership" actually participated a) in the election of the BoD and b) how much--because of that--the ARRL's decisions are actually influenced by a majority of US Amateur Radio Operators.

Nothing wrong with the concept that the BoD represents someone, but who they represent is those members of whom decide to actually be active in the goings-on of the ARRL; and I don't think many do. Any numbers on that?

Uhhhh...in what universe?

The only "Advanced" class licensees that I know of that took an
Extra written test but didn't upgrade were one's who failed the 20WPM.

And I'd like to know how getting more operating privileges is a
"downgrade"...?!?!

Would you take an airline ticket "upgrade" by moving FROM First
Class to Coach? Uh uh...It's the other way around. Same here.

> Possession of the Advanced class license proves that the holder met
> higher standards than the current crop of Extras.

Perhaps. Certainly the Advanced Class folks passed a more
stringent code test. My Advanced written was hard, but so was the
Extra. I am proud of both.

Hansel, you appear not to want to directly answer a simple question,
and this was your third opportunity to do so. So again I must
conclude from your answer that you would, indeed, call a station that
you knew was operating out of band.

We'll mark you down with Dave as knowingly and willingly working
stations out of band.

With several kind wishes,
William

Yes...silly. It was a pathetic troll. No more.

> No problem for the rest of the radio world. They continued to evolve,
> grow, advance, and discover things...and make profits on all that...
> without any assistance from amateur radio.

Amateur Radio long ago gave way as a boileroom for technology.
It now serves as fertile ground for spwaning new interest in
electronics for many.

It also continues to provide a very necessary and versatile
public service.

These are facts acknowledged by everyone from Congress to
industry leaders to public officials who have had to call on Amateurs
to respond.

That is doesn't fit your lying rants is inconsequential to anyone
but you, Lennie.

> Professionals make money at their activities...that's why they are
> called "professionals".

Great. You're on the same playing field as drug dealers and
prostitutes.

> Tsk, tsk...more hypocrisy...you claim you never said anything bad
> about professionals yet there you go making nasty to pros again.

Nope...to one, ALLEGED "pro".

You keep trying to make it a plural, Lennie, insinuating that
this is my position towards ALL "pros"...

It's not...never was...JUST you...Don't you feel "special"...?!?!

> Sigh...think of the alternative. If I got an amateur radio license I
> might turn into a bullying barbarian. It wouldn't be nice to have
> TWO like you in the newsgroup, would it?

Congratualtions, Lennie...You're ALREADY a bullying
barbarian...Didn't need any federal license or 14 years of night
school to get there, either.

> I didn't "rewrite history," Stebe. All the OTHER radio services I
> wrote about took place in OUR reality, independently, without any
> help from ARRL or amateur radio.

Your OWN history, Lennie...Your OWN. Nice try to redirect, as
failed as it was...

> Everyone knows about AM and FM broadcasting...(SNIPPED)

Yes, Lennie...we don't need you to blast the NG with yet another
cut-and-pasted smoke screen for you to hide behind.

> > You still spend countelss hours trolling for arguments that you
> >subsequently try to turn into a defensable "it's character
> >assassination" rants. Still doesn't work.
>

Let's see...WHO is in this forum without any valid experience or
vested interest in the topic, Lennie?

> Trying to insult my wife indirectly is not nice. It's your style but it
> still
> is not nice and doesn't work very well, does it?

I am not insulting your wife...Just her lame husband and her
obvious lack of taste in choosing one.

Yet you still seem to ahve a problem understanding the difference
between AMATEUR Radio and all otehr forms of radio...You continue to
think Amateur Radio should be like them, when Part 97 specifically
lays out what it wants Amateur Radio to be.

> However, for casual "ragchews," I've used CB...perfectly legal to
> do so without any morse knowledge or needing a ham license.

And considering the character and content of most "ragchews" I
ahve heard on 11 meters, I'd say that you were right in your element,
Lennie.

> > That you never used Morse Code is not germane. Millions of other
> >radio users never use it either. So what?
>

Or in other words, YOUR "independent" thought, ie your OPINIONS
are more valuable since they are contrary to someone elses...uh huh...

> > Leonard H. Anderson, retired from regular hours engineer, is a
> >known pathological liar and newsgroup antagonist.
>
> Tsk, tsk, tsk...Stebe froths at the mouth and does the personal-
> insult bit again.

It's not an insult if it's true, Lennie.

You've been caught lying over and over.

You are knee deep in a newsgroup for which you have expressed NO
interest in being a proactive participate except to rant in this
forum...THAT makes you an antagonist.

> Here in the present reality, there are differing OPINIONS, not "lies."

When you make an assertion that is determined to not be true,
THAT is a lie.

YOU have been caught lying on MORE than one occassion.

> Strange to associate "concept of amateur radio" as being all about
> morse code testing.

No, Lennie, YOU are the one with the "morse code testing"
fixation.

You are the one who cannot discuss ANY Amateur Radio topic
without interjecting it.

Still sucks to be you, Lennie. You're still a putz.

Steve, K4YZ

> Of course you do. Everyone has seen it in this free, open,
> unmoderated forum.

What YOU represent is not what anyone that I know calls
"professionalism".

You have the tools to make a difference in Amateur Radio, yet
your only action is to antagonize, humiliate and insult in this forum.

Hardly "professional" in ANYone's definition.

> You "knew everything about electronics engineering" after working
> less than a year as a purchasing agent in a company making
> set-top boxes and modems.

You will, of course, provide the reference for the "quote" you
just cited?

> You've consistantly tried to equate college night courses with some
> kind of alliterative low-grade "night school."

No, Lennie, YOU have demonstrated that it's some kind of
allitaritive low-grade "night school" by your assertion of
"professionalism" and subsequent conduct herein.

> You've consistantly said I was a mere "bench technician" rather
> than a design engineer...yet you've never tried to check with any of
> the past employers I've listed nor contacted any of the U.S. radio
> amateurs I've listed as references.

I have yet to find any product in my home or in MY profession
that has your hand in it, Lennie.

And discussions with people who knew you placed your
"contributions" at teh bench technician level...I just picked up on
it.

> > That assertion is yet ANOTHER lie from somone whio finds it EASY

> "Mockery?" From the expert Dill Instructor with hardly any work
> experience in ANY engineering?

This forum is NOT about "engineering", Your Scumminess. It's
about Amateur Radio.

> Tsk, tsk, tsk...all you do is vent hatred and bile against another
> because that is your nature in here...always insulting the person
> who has opinions rather than tackling the subject matter...and,
> when there is no possibility of a valid response to the subject, just
> more heaping of insults against a person.

The "opinions" you express are as received as equally injurous as
YOU receive against you.

The only problem is that you seem to think you are the only one
with a valid opinion. THAT makes you arrogant.

> > As for "going on 84", I will gladly jog around the block a few
> >times with you or see how well you do carrying a full field pack on
> >the rescue team. NOW who is involved in another "ploy of pervase
> >character assassination"...?!?!
>
> Tsk, tsk, tsk...Stebe reacting as if He were the only one mentioned.

Well, Lennie...YOU said "48 going on 84"...

To WHOM were you refering?

And I will STILL mount up taht pack and take a jog around the
block with you...You also accused me of being "pudgy", yet evidence to
the contrary ahs been presented.

More of that Andersonian "character assassination" going on, I
see...

> Unless Stebe moved (again?), He does not live in Pennsylvania
> nor is he a renowned amateur historian.

I need to live in Pennsylvania or be a historian to make a fool
out of you...?!?!

I don't THINK so!

> > Since YOU seem to be the only one who deems it important to
> >interject arguments about Morse Code into threads that don't even
> >adress it, I'd say the fixation is yours, Oh Putzy One.
>
> Absolutely. I interject comments about the beloved smartness of
> the morse code test at any opportunity.

And when the thread is NOT about Morse Code, that makes you a
troll.

> Contrary to your personal (weird) beliefs, just getting into U.S.
> amateur radio on HF allocations requires a morse test. [see subject
> title "A Newbies View On Things"]

Sorry, Scummy One...

FEDERAL LAW requires that one know Morse Code to have access to
the Amateur HF allocations. This was based upon international
convention which has since been changed. The United States Government
is presently in the public comment phase of chainging that
requirement.

My only "belief" is that one should comply with the law as it
exists while it exisits.

You seem to think selective law compliance is OK.

> Some of us desire to change the amateur regulations and eliminate
> the morse code test. Being a "member of the amateur community"
> through licensing is not required to change federal laws [see the
> U.S. Constitution in regard to who may communicate with their
> government].

Then communicate with them. Your presence and practice here is
antagonistic and argumentitive. You long ago lost any initiative on
your "opinions" when you started in on individuals.

> All amateur learning STOPS after achieving Extra in Stebe's World.

If that's what you think, Lennie, and that's what you NEED to
believe in order to sleep at night, well, who am I to deny you a good
night's sleep. That it's not true is inconsequential to YOUR needs....

But I did, Lennie. Had fun, too, but it still wasn't MY station
(save for being NCOIC of the facility)...It was the Marine Corps', and
they provided more than adequate instruction on how it was to be set
up and what they expected from it.

Therein lies the difference between you and I...

> ADA was...(SNIPPED)

Yadayadayada...same old drivvel.

And the Army COULD have sent you to diesel mechanic school, jst as
easily as the USMC could have sent me to it...It's thier game.

> ADA did have several...(SNIPPED)

Yadayadayada...

More ranting on about a 1950's era event that has NO relevence to
MODERN Amateur Radio.

> Yes, "senior NCOs taught us" and said "do this." This is normal in
> a work environment were supervisors also teach and say "do that."
> Somehow you find that deplorable?

Absolutely not.

YOU do, however, since you have, on several occasions, tried to insinusate that YOU set up a "KW trans-Pacific" radio station on the Army's behalf.

> I learned all that was required (and more) on-the-job and later
> became an "NCO" who said "do this (or that)."

Congratuations.

> That was all before Stebe was born. It must make him very angry
> and furious that anyone actually did those things before his life
> experience began.

Nope. Not at all.

What I find FUNNY is that you repeatedly try to insinuate that YOU were somehow singlehandedly responsible for all of the accomplishments at ADA.

Shall we revist YOUR assertion of how you passed "1.2 million messages"...?!?!

> I still honor the men and women of my Battalion, knowing the history
> from first unit formation to changes through today. I am proud of
> what I did, of my fellow signalmen for "getting the messages
> through." We did it. It's on record, including two Presidential Unit
> Citations. Callsign ADA still exists, now that of U.S. Army Pacific
> Headquarters at Fort Shafter, Hawaii.

People do not Honor their comrades-in-arms by trying to make it appear as though THEY were the sole reason the US Army Signal Corps was able to pass HF radio traffic in the 1950's.

And people do not Honor thier comrades-in-arms by trying to garner newsgroup message points by trying to associate THIER Army "career" with the blood shed by soldiers KIA three years before they were in-theater.

Lennie...The only person you try to "honor" is yourself, and you've already proven that THAT is a waste of energy.

You can thank BPL for that. If we can't lick them on the
egress issue, we'll add multi-hundred-thousands of HF ops
to provide a plethora of additional ingress points and let
the BPL system ops assess their network reliability from that.

I don't think we'll be hearing any protests over this proposal
from Yaecomwood either.

> proper credentials of amateurism. Stebe is a mighty amateur in
> radio...as well as in human society.

You're right about one thing...there is no validation of
credentials...save to cross reference federal databases.

As of this moment, you do not hold a station license in ANY radio
service, nor are you a licensed Amateur Radio operator.

> > AMATEUR Radio, Lennie...You have exactly zero-point-zero minutes

> amateur radio must also "have experience in amateur radio?"

Nice try.

> Perhaps's Stebe thinks the amateur radio "service" is like the USMC.

Nope. That's YOUR scthick, Lennie.

> You WANT (desperately) to be "better than others" for having that
> federal authorization and become enraged when others do not
> respect your glorious and noble achievement...forgetting that your
> other actions as a human being are deplorable, even despicable.

In this case I AM better than YOU for having done it,
Lennie...That includes over 30+ years of experience in the topic that
we are addressing...AMATEUR Radio.

> My opinion is that none of the above will have any effect on Stebe.
> He will continue to vent rage and fury on certain individuals because

> that is the only tactic available to bullies. But, it needs to be said
> once in a while.

There is no "affect" to be had, Lennie.

I am not the one in a newsgroup of which I have no practical
experience...Nor do I pretend that some experience in another related
field somehow means I DO know more than those who ARE involved.

You are the bully here, Lennie.

A lying, antagonistic one. Sucks to be you...again.

Steve, K4YZ

It can't be that hard; after all, hundreds of thousands of CBers managed to get on 11 meters. Modern rigs don't require much "tuning" and most newbies tend to buy pre-assembled dipoles or multiband verticals. The rigs are plug and play with microphones included.

We had a pretty good license structure in the mid '60s. Most folks started with a (non-renewable) Novice ticket with very limited privileges to get their feet wet. Then they upgraded to General with full amateur privileges.

That wasn't good enough for ARRL. They insisted we needed more license classes and more exams (incentive licensing). FCC bought into it, and we all had to upgrade or lose privileges. Now, ARRL is cheapening the value of those higher class licenses they insisted we get.

I figure that in about five years we'll have only one license class, and that it will require only a single simple multiple-choice exam. Will that re-energize ham radio? I doubt it.

This follows on the lines of the thread that Mike and I have commented on previously, so here goes:

On 18 Jan 2004 20:34:05 GMT, lenover21@aol.com (Len Over 21) wrote:

> Alternative Universe Probable Truisms -
>
> 1. There would be NO ARRL to provide "guidance" and direction.
> That expired before St. Hiram expired. [in this alternative
> universe] Newington, CT, would have no museum.

True - no AR, no ARRL. Mr. Maxim would be remembered only as the inventor of the Maxim Silencer for explosive weapons, and for his work on automobile silencers (mufflers, I assume).

However, following along with the subject of the thread - the startup of a "new" Amateur Radio Service" would concievably attract a lot of people to it - an organization starting up to represent them and their interests (and take their money) seems like a given.

>
> 2. There would be NO morse code test since no other radio
> service except Maritime Radio used morse code. There
> would be NO need to keep a "pool of trained morse radio
> operators" for any national need.

True enough - if amateur radio were invented today, it's pretty unlikely that Morse Code would be a mandatory requirement or play any significant role - it's a dead technology in the commercial and military world today (just spies and some covert military ops remain professional users of morse signalling today). I believe that it would be a 'special interest' thing for people who wanted to play around with it.

I wonder, though, if in the absence of Amateur Radio, something else might have evolved to meet the need of having extra trained people available? Perhaps an auxillary (and voluntary) communications corps, mobilized by the military or local government during times of need? They might even provide the equipment and training...wouldn't be free, though - Amateur Radio doesn't cost them much (if anything) to mobilize.

Well, there would still be old timers telling tales - just not ham
radio ones ;)

>
> 4. The Titanic would have sunk anyway and several movies made
> about that tragedy.

Unfortunately, yes. And many other unfortunate events may well have
become much disasters or have increased in magnitude, as there would
have been far less people monitoring the bands and detecting /
relaying emergency traffic if the ARS had not existed.

> "Independence Day" would have been

Without the ARS, one indeed wonders how long companies like
Hallicrafters and National would have survived - after WWII, amateur
radio was a large part of their market. Could they have hung on by
just selling radio equipment to SWLs listening to foreign commercial
broadcasts?

Some companies may never have started up in the first place, as their
beginnings were entirely in amateur radio.

> "ham radio pioneering."

Agreed - commercial and military radiocommunications would have grown anyway. Although some developments came from amateur radio, many more did not.

A few years ago, I attended a Lucent course on their CDMA (spread spectrum, code division multiple access) cellular base station radio equipment. A Qualcomm engineer (CDMA is their patented technology) started off his presentation by asking us if we knew who invented the concept of CDMA. Bell Labs? MIT? The military? No. It was a German actress named Hedy Lamarr! She propsed it as a method of secret communications back in the 40s - obviously the technology (powerful computers) to implement it did not exist at the time. He went on to further amaze the group by informing us that she also devised the concept of frequency hopping (which I believe was used during the war - please correct me if I am wrong). Definitely a good thing that she got out of Germany prior to the war! Hedy was not an amateur, and had no interest in radio.

Good ideas come from everywhere.

A question: what would not have been invented, or delayed, had the ARS not existed?

I believe that they would, along with IC and all of the other national regulatory agencies. It's a vast spectrum, and most of their energies are directed towards management of the commercial sector.

>
> 9. "CB" would have been created anyway, a fore-runner of the
> license-free personal radio wave of the future. [it is 46 years

Probably - people love to communicate! Folks would have seen the cabbies, police and other commercial operators using 2-way radio equipment, many ex-military guys would have experienced using the technology first hand, and would have wanted the same type of system for themselves. (in the pre-cellular telephone days, anyway...). And, if there's a market, somebody would have developed it!

Personally, I don't view my license as a measure of my expertise in the art of radio. As my examiner told me when he shook my hand after I passed the test - it's a license to learn.

Nothing more.

That's one way of looking at it, Jim. To me, it looks like a purely political move - that is, trying to please the greatest number of members...and voters...and customers...

400,000 upgraded licences = 400,000 happier ARRL members.
Drop code = some number of happy new HF - using members.
Keep code for Extra licence = a 'tip of the hat' to the 'Extra' class members, to give them something to be happy about (although keeping code testing as a requirement for a licence class that provides only additional phone bandwidth as a perk is pretty odd, I'd say...but it does make the Extra level licence harder to get - that's what everybody wants, right?).

-and- the big one:

New entry level licence with 100W on HF phone, plus simplified test = a whole bunch of happy new potential ARRL members = lots more potential members....and voters....and customers.....

All of these proposals are good news for the manufacturers of ham equipment, and perhaps for us too - if demand is increased, production will increase and prices of HF radios might do down!

Plus, each one of the above members that got something additional added to their privileges if this proposal is accepted would have the ARRL to thank for it. In theory, anyway.

Considering that, following the ITU decision to make code optional most of the world is moving towards removing the mandatory Morse Code requirement outright, there isn't much else that they could do without looking like defenders the status quo, and annoying even more of their members....and denying them the rights being granted to their fellow amateur radio neighbours in the rest of the world.

Like, for instance, those just north of you have proposed to do - and that's likely to happen fairly soon, I expect.

Not true. Only a small percentage of licensees are ARRL members, and they tend to be the folks that have been hams a long time. The ARRL is sticking it to the folks who worked hard in the past to pass 20 wpm and the Extra Class written test. Ironically, those licensees who stand to gain the most from this proposal are the ones least likely to join the League.

> Keep code for Extra licence = a 'tip of the hat' to the 'Extra' class

5 WPM for Extra Class is an insult, not a tip of the hat. The Extra Class ticket grants exclusive 25 kHz CW segments on 80, 40, 20, and 15 meters. These are prime DX frequencies and the proposal doesn't change that. A higher speed code test for Extra would be more appropriate.

> -and- the big one:

> New entry level licence with 100W on HF phone, plus simplified test =

This is what the proposal is all about, saving ARRL and the jobs of its staff. But as we learned after the No-Code license was created in 1991, most new hams don't join the League.

You're right - that should have read "potential ARRL members". As in,
400,000 folks who are so happy that the ARRL got 'em something, that
the ones who aren't already members might just join up. Perhaps that's
what they're thinking, anyway...

My error.

Oops again!

Being that the requirement was dropped fairly recently to 5 wpm, and
that other countries are dropping code altogether as a requirement,
how could the ARRL justify an increase in speed?

As I understand it, the law providing free testing for Novices remains on
the books. Hence, it really does matter what the entry level licence is
called. If it is re-named 'Novice', then the test is free.

No, it's not part of the proposal, and having since read the whole thing on
the ARRL web site, it appears that the league haven't thought about this
particular wrinkle, as they say that the name is still open and it could be
called something else.

As I see it, the new Novice would be a replacement for the Tech, which is
already pretty easy

>>>
>>> 'Phone image subbands for 80/40/15 widened slightly

>>

Better to keep those on the Novice freqs and refarm more useful spectrum to
phone

>>
>>> Old Novice subbands replaced by additional CW/data
>>> and 'phone subbands on 80/40/15. Novices also get privs on 6, 2, 222,
>>> and 440
>
>>See above
>
> Please clarify.

I see no benefit in giving over 7125-7150 to phone. 7075-7100, for example,
would be the same size and in a more useful place. Moreover, it would
harmonise Region 2 US hams with US hams outside R2.

>>
>>> Novice power level set below that requiring RF exposure evaluation
>>

With that power limit you could take out the RF exposure questions, but I
think the test is already easy enough.

>>> General to be
>>> derived from Tech and General, Extra pretty much as-is.
>
>>What do you actually think of this proposal yourself, Jim? You don't

Re-naming the Tech as a Novice would make the test free under existing law. That has some appeal.

>
> Second, they will probably just dump Element 1.

Agreed

>
> Third, they will probably not hand out free upgrades because it costs
> them little or nothing to keep the closed-off classes.

I think that for some reason their computers are only set up to handle 5 classes of licence, but I guess that works out as there won't be two types of Tech anymore (this is also the reason why they aren't recorded differently right now).

I personally am not in favour of keeping closed licence classes, though. I think it is better to move on.

They probably won't. But if Extra is the top class and the only one to retain a code test, why not make it realistic one? A 5 WPM test does not demonstrate code proficiency. A 13 WPM test would be a nice "Tip of the hat." We 20 WPM Extras haven't had much to cheer about in a LONG time!

There is no such law.

As an incentive to stimulate interest, the ARRL VEC (maybe others)
adopted a policy of waiving the authorized charge for the Novice
examination. W5YI VEC (for one) tossed a hissy fit and tried to
convince FCC to require a fee, but the FCC declined to make it
mandatory.

> actually participated

>a) in the election of the BoD

Every full member gets a ballot. If they don't bother to fill it out
and send it in, it's their loss.

The requirements to run for Director are pretty simple, too.

> and b) how much--because
> of that--the ARRL's decisions are actually influenced by a majority of US
> Amateur Radio Operators.

Obviously not as much as we might like, because the majority of US hams
who bothered to express an opinion on code testing in comments to FCC
back in 98-143 times wanted at least 2 code test speeds. And the comments
to the various petitions now before the FCC on code testing (like
RM-10811) are majority-pro-code-test.

So the ARRL BoD is obviously taking some people's definition of "leadership"
(meaning do what you think is best regardless of majority opinion) in
proposing what they've proposed.

> Nothing wrong with the concept that the BoD represents someone, but who they
> represent is those members of whom decide to actually be active in the
> goings-on of the ARRL; and I don't think many do. Any numbers on that?

You can look up the various BoD election results as to who got how many votes.

--

What will be really interesting is if/when FCC gives it an RM number, and what the comments are. And what FCC will do.

I'm thinking that the free upgrade thing (which was rejected back in restructuring time) will be rejected *again*, and that the "21st Century Novice" idea will be adopted.

I recall Hans predicting a 15 wpm code test for Extra as part ot the ARRL proposal.....

Who are "you folks", Chuck?

> You have to do it!!!

Exactly!

> That means really figuring out how
> to put up the appropriate antenna, tuning it, tuning and running your rig
> properly, ect.

Well, most rigs today don't require tuneup. And a lot of them have
automatic
antenna tuners.

> You can get all the answers correct on today's exam and
> still fail in the real world.

That indicates that the written tests are inadequate.
>
> In fact, there have been "hams" here locally that tried for over a year to
> "get out" and learned more in that process than they ever learned by
> memorizing today's exam questions.

A year? Good heavens, back in the bad old days, the entry-level
license was
only good for a year! And that was back when ham rigs actually had to
be
tuned up!

If it takes someone with a license and a reasonable budget of time and
money
a whole year to set up a working HF station, something's really wrong.
>
> I submit that these IMPROVEMENTS recommended by the ARRL are a good start
> and will have more people LEARNING how to get on HF.

How? There's no additional written testing proposed - in fact, a big
part
of the proposal is free upgrades. If someone doesn't know how to get
on
HF now, how will reducing the entry-level writtens and free upgrades
teach them?

>A GOOD thing.

I think the new Novice ida can be a good thing. 37 years ago, that's
how I got started. Didn't take me a year, either, even though I had
to build my transmitter, antenna, receiver...

> The
> bands are FAR less busy than they were 30 years ago.

How do you know?

We have more bands and modes than 30 years ago, so we're apt to
be spread out more.

> Unless we get more
> people into this great hobby, it's gone...

We have more hams today than ever before! 30 years ago (1974), there
were less than half as many hams as today. So the number of hams isn't
the problem at all.

>
> And to really improve HF operations on ham radio...we must get rid of the
> archaic mode divisions on each band.

Let's do this:

Lower 15-20% of each band: CW only
Middle 20-25% of each band: Mixed digital/CW (digital preferred)
Rest of the band: Analog phone/image.

80 meters, for example:

3500-3575 CW only
3575-3725 Digital/CW
3725-4000 Analog phone/image

> I would like to see us have the same
> privileges as the rest of the world's amateurs enjoy

Including their power limits and written tests?

>....or are we not good enough???

We're simply too numerous.

They're trying to revive a DEAD HORSE Hans.
(For as long as you've been in ham radio cannot you
realize this?)

Better face up to it, Ham Radio is DEAD.

Burt and Wayne Green are right on this one I am afraid.
Even new 2 Meter radios are going for under $200.00
at HRO and AES. Nobody's buying ham gear except
for on e-Bay where you chances of getting "E-screwed"
on that "perfect condition used radio" are better than 7 to 1.

Nobody new wants to bother with ham radio and antennas
and climbing a roof or putting up a tower when
all you need is a $300 Dell Multimedia PC and a DSL or
Cable Modem connection? I mean, let's get real here, OK?

...and please...everyone else, spare us all the tired
rehashed old comments we've *all heard already*
100 times about "when the power goes out, CW
always gets thru the QRM, my 2M HT will
still work" ...etc etc ad-nasuem

(We've all heard this schitk 20 years ago)

Ham radio is TECHNOLOGICALLY OBSOLETE and has
become *nothing more* than a venue where old retired white males
get together to kibitz on the air for an hour a day or more about the same
old tired topics they've been talking about for the past 5 Years.

Stick a fork in it, or send it off to the glue factory or Fred Sanford's
junkyard.

> G5RV.....yeah buddy.

What would be the problem, with such a setup, Dan? I've made thousands
of
excellent contacts on that band with a similar setup.

oh wait - those contacts were on 80 meter CW.

But it's the same part of the radio spectrum, right? "Radio physics"
is
the same for all modes, isn't it?

Here's a concept I read very recently that may explain the "free
upgrade"
thingie: 'Blame It On BPL'.

Giving all ~322,000 Techs and Tech Pluses a free upgrade to General
will more than triple their numbers, from ~141,000 to ~463,000. If
even 10% of the upgradees get on the HF ham bands, that's over 32,000
new sources of trouble
for BPL systems....

What do you think of my idea? (I'm taking bets on how many people flame my idea.)

Eliminate the 5 wpm exam but keep the rest of the exams, license structure, and privileges in place. All No-Code Techs automatically gain Tech Plus privileges. The General and Amateur Extra licenses require ONLY the written exams.

It's simple. The confusion over No-Code Technicians and Technicians with Tech Plus privileges is finally resolved. All written exam requirements remain in place. (In spite of the red herrings thrown around, the trend has been towards beefing up the written exams rather than watering them down. Since the restructuring in 2000, RF safety questions have been added to the new question pools.)

I'm surprised the ARRL didn't propose this, as it would be simpler. (Or the ARRL could have proposed the exact same thing I propose here but retain the 5 wpm exam for the Amateur Extra class as a compromise.) I think my idea would do more to simplify the FCC's work and be just a continuation of the 2000 restructuring. I'm not sure if the FCC will like the ARRL's proposal due to the added complications. Remember that the restructuring of 2000 kept the same basic license structure in place - the only real changes were eliminating the 13 wpm and 20 wpm exams, keeping the 5 classes in place, and stopping the issuance of new Novice, Tech Plus, and Advanced licenses. The FCC didn't bother to reshuffle band plans, probably because it felt that would be too much work for too little impact.

OK, OK, my idea isn't that original. No Code International essentially proposes the same thing.

I'm optimistic about the prospects of eliminating the Morse Code testing REQUIREMENT. The FCC did say in its restructuring that the ITU treaty was the main reason to keep the Morse Code requirement and repeated many of No Code International's arguments. Now that the ITU has given all nations the go-ahead to eliminate Morse Code testing requirements, the FCC has no reason to retain ANY Morse Code test. Of course, Riley Hollingsworth could change his mind on the matter, though I don't see that happening given that we're still waiting for the "General Lites" and "Extra Crispies" to overrun the HF bands with the music of the Lords of Acid. (That would be not only a violation of the ban on music but also obscene.)

I think the FCC will propose some variation of what I'm proposing. It may retain the 5 wpm for the Amateur Extra license, but this would require that Riley Hollingsworth change his mind on the Morse Code

testing issue. It's conceivable the FCC could automatically upgrade all Novices to Tech or all Advanced licensees to Amateur Extra. But I think the FCC is satisfied with the basic license structure as it stands, or it would have completely changed things in the restructuring of 2000.

I highly doubt that the FCC will expand the phone bands, and I don't think this should happen anyway. SSB is a bandwidth hog compared to the digital modes (CW, PSK-31, etc.), and there should be some incentive to develop new bandwidth-efficient digital modes rather than have SSB crowd everyone out. That's why phone is illegal on the digital bands but (with the exception of 60m) Morse Code is legal on the phone bands.

Well said, Len. I often find it amazing to read some of the messages here after being distracted from the newsgroup for a few days. The attitudes and realities here seem far out of touch with the realities of the world.

> U.S. amateur radio seems to be another
> center for national misogyny. It is a hobby

I've thought about that many times and don't really see a problem with it. As long as there isn't a widespread effort to intentionally exclude, not everything in this world has to be all inclusive (to each his own). While some will obviously always want to exclude, it isn't more commonplace in Amateur Radio than elsewhere.

I don't think the gang of fifteen to listen to a damn thing. That is
obvious by their recent proposal.

Even the local two meter, no code techs don't like it.

And the ARRL claims to be a voice for ham radio? Its not the ham radio I knew and loved. I don't know what it is anymore.

I forsee this latest debacle of the ARRL will result in further damage to
Amateur Radio. Much worse than the failed and flawed 'Incentive licensing'
garbage of the late 1960s.

I hope that I am not particularly out of line here, but I just passed
my technician exam by mostly memorizing the question pool. I happen
to learn best by doing, and while I've been studying morse code, and
can send okay, I cannot receive very well. How much more of a "lazy,
bum, low-brow idiot" can I be if I learn to receive and send code at a
decent speed? (5WPM is so slow, it hurts my ears, by the way. I hate
it. I like 10WPM most, in terms of copy.)

The technician license really isn't a big deal at all. I'm seeing
this SOLELY as an opportunity to get my feet wet, and if I wan't more,
I'll GET more. It only took me three days of reading the first half
of that ARRL book, and memorizing the test pool questions (though I
did miss two). I'm anxiously awaiting my license, and looking forward
to chatting with some folks on a repeater (I have an Icomv8000) And I
EXPECT to learn more and more about this hobby by association.

As soon as I get my callsign, I'm going to join the ARRL, and I'm STILL going to learn morse code, even if they drop it. I happen to think that it has practical use OUTSIDE of radio, to be honest... (Lights, etc...) and it's demise *IS* a tragedy. I jumped into this hobby at age 30, LATE in the game. The three days I've spent studying to take the test are a testament to my ability to MEMORIZE certain concepts, and while I'm proud to get to be a ham, I'm not particularly proud of the means. I will therefore conduct myself in the best manner possible at all times, and through my sincere intellectual pursuits in this regard, I will make my license mean more. Not necessarily YOUR way, I'm sure, but it's MY way.

I made a promise to myself that if I wanted an upgrade to my license, that I would fully understand all of these critical concepts before proceeding forward with this hobby. I wanted to get to know the community, learn by doing, and go from there. I figured I'd find out sooner rather than later what I wanted out of this hobby. I apologize for my digression, but I sincerely believe that there are many such as myself who are interested in learning more about ham radio, AND putting that knowledge to use. For someone to do any serious DXing, they will need some kind of help making antennas, and knowing what to do to make them work the way you want them to. You cannot help but learn a thing or two when doing this. It's not all for naught.

I would also like to add that until I bought my icom, I have NEVER touched, or personally seen a ham radio. I do not have an elmer, I have done every bit of this ALL BY MYSELF, with the help of only a few books from the ARRL. (I have until July to try and get my General, which I plan on doing, but... I digress)

I understand the sentiments of you vets out there. The instant gratification crowd, you can just hear the boom boxes of that rotten group of "kidz" who're gonna "rock da wavez"... I won't lie to you, the disrespectful punks and riffraff that are bound to come on the air and start messing things up for everybody, but they'll eventually get bored of it. Ham radio *IS* dying as-is. It needs to be energized, and while I have mixed EMOTIONAL feelings about the "dumbing down" of the tests (which does cheapen the license much as our public education system has cheapened the high school diploma, which DID mean something before...) We'll still have people wanting to participate on field day, actively mailing out QSLs, etc... And at first you may have a few idiots get on HF (For God's sake, I've heard MANY an idiot on HF!) God knows that there are plenty on 2 meters, but I digress.)

I will agree that the HF bands will be inundated, at least initially, with those that can only be described as "low-brows". But they'll need money, time, and patience setting up an HF rig, and if they have the patience to do all that they will at least do one of two things:

a.) Get bored and quit.
b.) Reform themselves, and become good hams.

I guess a provisional c. would be that they'd become a lid, and make everybody mad, but even a lid (and they're semi-rare, I think) doesn't generally be a lid on purpose. <lol>

The worst trait you can see in a ham is one that I'll admit I possess:

Impatience.

I spent a full day setting up my small rig and antenna, learning what to do, soldering for the first time in my entire life, and I haven't DARED press that transmit button. It is *KILLING* me that I can't transmit yet while I'm listening to some of these nets. There's a vast expanse of information just waiting to be unleased, and a nice, friendly community that I look very forward to joining. I look forward to the adventure. I'll do it right from here on in, and while I'm interested in morse code, I will agree that even 5WPM is a joke... It *IS* an insult, mostly because it SOUNDS TERRIBLE at 5WPM! I don't like it, in fact I hate it. 10WPM at LEAST, but I don't make the rules. I see morse ONLY as a practical thing to know. Not technologically necessary to ham radio.

We're left with the ultimate reality that this nation is being inundated with instant gratification generation X, Y, Z, and that ham radio is *DYING* in America. I wasn't even EXPOSED to ham radio until I was 25 years old. (I wish I were exposed to it MUCH earlier! I'd have loved it!). It's been exclusively a money issue that's kept me from getting a rig set up, so when the money was there, I really applied myself to pass the tech exam ASAP, and once I get my feet wet, I've decided...

1.) I'll either go forward full force.
2.) I'll quit, and possibly sell my gear.

I'm pretty sure that I'll choose #1, and to THAT end...

My ultimate goal will be to build my own radio from scratch. Not from a kit, but from parts that I will have to buy myself. From a schematic that I will design myself. It's a worthy challenge, and one that I'm really not afraid of, because the laws of electricity don't change. All you have is what you have. If something doesn't work, you have only yourself to blame. <haha>

Knowing this, though, at first, I will probably put together a kit radio to start, but my ULTIMATE goal is a homebrewed HF rig. We'll see how it goes, and I'm sure I'll be posting here from time to time.

I have a very sincere desire to learn, and I want to learn MY way. I've taken advantage of the current situation, because the situation is there, and it has enabled me that I CAN learn my way. I'll be the proudest ham in the world when I achieve my first big goal of putting my own rig together, and if, Lord willing, I can get in the shape to do some serious hill climbing and DX'ing, I'll try to win me a field day contest.

So the means to the end are how important in my case?

Am I wrong to be proud to be a ham now? It's still going to be a close-knit fraternity. The idiots who will go on the air to jam, and to make body cavity noises will still be there, but if continued interest can be generated... I don't see this as a bad thing. (God, I've only studied code a week, and can send A-Z, 0-9, and some basic punctuation marks... And that's at 15 WPM, COPYING is another story..)

Again I digress, and I blither... I hope to catch some of you on the air someday, and I hope you understand my love and interest in this hobby is sincere. The blood doesn't get much newer than this. I'm still waiting for my callsign.

With all respect, and sincere admiration to you vets out there.

I am sure they could drop some of the ham radio adds and put in some ten
codes and echo mikes to help pay the bills for the loss of so many members.

Don't mean to nit-pick here but it was the FCC which dreamed up
Incentive Licensing, not the League. The FCC proposal was far more
Dracinian than was the League's response to it. In the end the FCC
bought into some of the League's arguments but imposed it's own
"vision" in other cases. If you go back thru the history of ham
regulation you'll find that it's usually been the FCC which decided
to generate the regulatory lurches, not the ARRL.

Im sure they will. Dan I have a great Idea, since the FCC and the" CBRRL" are
HELL bent on destroying Ham Radio, I have a great way to introduce the
CBplussers to HF.
When you hear the CBplussers calling CQ, just answer them on CW, perfectly
Legal, and it will probably Piss them OFF. Thats what Im going to do.

> Thanks folks.

I am newer than you, but I do have a rig set up, and ready to go when
my callsign is granted. What I've learned so far:

1.) Make sure you have what you'll need. If you don't operate from a
car, and you want a mobile rig, make sure you've bought your 13.8V DC
Power supply. I used up every penny getting this bugger ready to go,
and I found I needed the following:

2M Mobile Radio (I got an Icom v8000)
Diamond X-50 2M Antenna
50' 52-Guage Coax
A pair of "banana plugs"
A pair of 50 ohm Coax plugs
A soldering Iron
Solder
A mono-stereo 8 Ohm converter (for earphones)
Both ears is good. (As far as listening goes)
Coax crimper
Wire cutter/stripper

Make sure you'll know EVERYTHING you'll need. I spent $150.00 more
than I thought I'd have to getting started. Total price tag for me
was $400.00. YMMV.

2.) You'll pretty much have to get on the air and ask, but ask
PREPARED TO UNDERSTAND! KNOW what it is you want to know, and go from
there. Nothing irritates ANYONE more than someone randomly asking
unrelated questions, and not grasping what's being told to them. If
you're transmitting with hum or static, they'll let you know. I don't
speak from personal experience, but by listening to the 2M repeater.

3.) Have fun, be polite, and follow the rules of transmission and you'll learn sooner rather than later whether or not you want to move forward in this hobby.

My ultra-newbie two cents worth.

With all respects,

73

Dan,

Two things:

Thing #1) With your attitude, you're going to be an asset to the
Amateur Radio service, and Amateur Radio is going to be an asset to you.
I've been a ham for over 40 years, and it just keeps getting better.

Thing #2) Always remember that the inbred world of rrap is not Amateur
Radio, so don't get discouraged by what you may find here.

"PC" my butt.

CW is authorized "anywhere" since it is a narrow band mode
requiring only a fraction of the bandwidth of any voice mode.

The ONLY time I've ever heard CW in a "voice" allocation was a
mobile station trying to check in to a net that wasn't being heard
otherwise. It worked well.

> I submit that US Extra class licencee's should be allowed to operate phone
> anywhere that the rest of the world can. Is that fair??? Or are we still
> destined to live in an amateur radio world surpressed by our own government?

No, it's not "fair".

Most US Amateurs are allowed to run far more power than they
need, and in most cases area able to erect antenna systems that
overshadow those of many other countries. Like it or not, we owe it
to the rest of the world to restrain all that ERP.

> Hey...ARRL, WAKE UP!!! If you want to keep the activity up you need to
> promote frequencies where we can talk to the rest of the world! How can I
> make this any clearer??? And provide incentives to do this!!! An extra
> 25KHz doesn't make it.

Like it or not, not all of the world is chomping at the bit to
have US Amateurs able to pounce on them at every turn. When Podunk
Island is ready to work the pile-ups, he'll announce his intentions.
Otherwise, WHY do we need to have all that spectrum? Except on
contest weekends it's ahrd enough to strike up a QSO as it is anyway.

Bully for you that you did it...However Morse Code STILL,
contrary to naysayers, plays an important part in international
communication in the AMATEUR Service. That' it's been put out to
pasture by the unwilling and the boistrous is evidient. That it's a
"good thing" is yet to be seen.

That's a moral judgement on your part. You're declaring what should
and should not be an issue to other people. IOW, you're telling them
what to think and what their standards should be when you say it
shouldn't be an issue.

> Your personal standards are
> your own - no one else's. Let's clear that one off - agreed?

My personal standards are shared by other people. I don't know
how many, but if there's even one other person who shares my
standards, then they're *not* "no one else's".

> >> No issue there - that is entirely your right.

> >Some people say it isn't. Not you, but some others.

> Others may, but who cares - it's none of their business.

Why not?

> >>I also
> >>understand that you do not wish to use it in any of your posts.

> be able to tell Kim that I tried to fix it for her, but it didn't work
> out with the rest of the group.

So you'd go through all that and wind up with the calls in the post because
some of us would complain.

> Maybe it's just me, but I would try first to resolve her complaint if
> possible, out of respect for her as a fellow amateur.

That's nice - but by doing so, you are validating her choice of
callsign. I won't do that.

> I prefer
> compromise whenever possible - not compromising my standards, but
> finding a way to achieve a balance.

My standards say that your compromise involves compromising my standards.
>
> >Note also, Kim said that if I wouldn't use her callsign, she didn't want to > >be on the
list..
>

> solve this issue.

She could solve it very easily by choosing an appropriate callsign.

I recall being told it was not *MY* place to judge. And I disagree.
It's my place to judge in terms of what I will and will not validate.

> Each of us is however completely in charge of determining what is
> appropriate for us as an individual, however. No question there.
>

That's fine. And I disagree.

It's a "word", Lennie...not plural.

And it's not meant to be "endearing"...just descriptive. In this
case it's more than adequate for the application. You have yet to do
anything to disprove my application of it, either.

About 25% of US hams are ARRL members. The percentage of *active* US hams who
are ARRL members is higher, of course.

> The ARRL is sticking
> it to the folks who worked hard in the past to pass 20 wpm and the Extra

Not just them. What about folks who worked hard in the recent past to get
5 wpm and the General class written?

Maybe. And maybe not.

Unless K0HB is mistaken, no such rule exists in Part 97. And since no
new Novices have been issued in almost 4 years, it's a bit of a moot
point.

But it might be a nice thing for VECs to do...
>

> >
> > Why?
>
> I thought the old Novice was too easy

Why? The old 20-25 question Novice I took in 1967 at the age of 13 was
adequate to keep me out of trouble, even though my first station was
homebrewed from junk parts. And that Novice license started me on the
path to Advanced in about a year, Extra in about 3 years and BSEE in
a little over 8 years....

And there were many many Novices like me. If an entry level license
keeps the newbies out of trouble and inspires them to learn and do
more, isn't that just about perfect?

> > Current Element 2 is very VHF/UHF centric, and so are current Tech Plus
> > privs. The goal seems to be to strike more of a balance between above
> > and below 30 MHz privileges.
>
> So change the question pool, but don't dumb it down

How do we define "dumbing it down"? If 35 questions are adequate for
all amateur VHF/UHF at full meat-cooking power, plus 200 watts on
parts of HF, shouldn't 25 be adequate for the limited privs
proposed for the Novice?

>
> Not in my opinion

It's the same argument used against the code test. Why *must* a ham
learn all that theory to use manufactured, approved gear with no
critical adjustments? Heck, most ham gear today won't transmit out
of band unless modified!
>
> >>Moreover, it can be now,

What's the problem? FCC kept the Advanced on the books from 1953 to
1967
even though no new ones were issued and the license conveyed no
additional
privileges at all.

> >>>Techs and Tech Pluses get free upgrade to General

> > the other?
>
> As I see it, the new Novice would be a replacement for the Tech, which is
> already pretty easy

Exactly. But that doesn't answer the question. You want Advanceds to
get free upgrades to avoid ~82,000 loose ends, but not Techs and Tech
pluses, who would
amount to ~322,000 loose ends.

I don't see why one and not the other.

> of Tech anymore (this is also the reason why they aren't recorded
> differently right now).

Incorrect!

Before restructuring, their computers handled 6 classes of license
(Novice, Tech, Tech Plus, General, Advanced, Extra). In fact their
computers *still* handle 6 classes! So there should be no problem at
all.

And as Tech Pluses continue to be renewed as Techs, expire, and
upgrade, that class will disappear completely.
>
> I personally am not in favour of keeping closed licence classes, though. I
> think it is better to move on.

I agree, but not at the price of giveaways just to make things look
neater.

How would you feel if it were decided to give all existing hams except
Novices a free upgrade to Extra, then have just two classes -
"Limited" (new name for Novice) and "Full" (everybody else)?

Larry, I might agree with you on this issue, and I'd hate to take a stance on something like this, because personally, I may not find it that terribly important.

I am a huge proponent of each one acting their best, etc... My only question is: Do you expect Kim to change her callsign? Especially after posting what you did? She might have considered changing it if the diplomacy had been there, but when you turn it into a war of principles, it's not likely she'd freshen her callsign up a tad. (Even though I'd like to see her do it, I wouldn't hold my breath.)

And she just may be a total sweetheart to boot. (I don't mean that sexually at all...) You can't tell with just a name. I'm new here, so I'll consider the value of my opinion limited, but I'd be more interested in stopping "bad behavior" than I would be in my passion and rhetoric admonishing it.

We don't disagree, necessarily, but I'll never show anything less than civility to Kim, here, or on the air, if it ever comes to that.

Ironically, I'm not sure I've ever seen anyone politely ask her to change it.

I wuz gonna post something similar but ya beat me to it.

Some details:

FCC's 1965 proposal included such doozies as:

- all Advanceds (40K of them, about 15% of US hams at the time)
DEMOTED to General class

- new "Amateur First" class license, with new written test and 16 wpm
code test, plus 1 year experience as a General.

- distinctive callsigns for all license classes so you'd know right away who was who.

- subbands that were even more restrictive (like the lower 50 kHz of the CW/data subbands being Extra only, and even more 'phone being taken away
from Generals)

And the ancient history is even more interesting. Before 1951 there were effectively only two license levels and one code test speed. FCC thought
that wasn't enough, and in '51 brought out three new levels and placed new restrictions on HF 'phone. Then in late '52 they reversed themselves and
gave all hams except Novices and Techs all operating privileges. Why the
turnabout? Nobody seems to know.

But after just 5 years (1958) of the new system, FCC was unhappy with it
and wanted changes. By 1963 they were so unhappy they said that things were going to change one way or another, and wanted proposals. ARRL's original 1963 proposal did not require any additional code testing for full privileges, and only one more written test (the old Advanced). There
were also at least ten other proposals, many from individuals, and FCC took elements from many of them.

Personally, I think FCC had a bad case of "Sputnik Fever".

> > I figure that in about five years we'll have only one license class,
> > and that it will require only a single simple multiple-choice exam.
> > Will that re-energize ham radio? I doubt it.

Oddly enough, in the years following "incentive licensing", the number of US hams grew like mad after having been flat through most of the 1960s.

Go figure - they upped the requirements and ham radio grew...

The problem is that the 15 old men of the BoD have just
disenfranchised themselves from over 200K Technician class
licensees who will now carry the wonderful class name of
"Novice."

The ARRL has less than 170K members now. The number of
existing Tech class licensees here is greater than that now.
Those aren't likely to become members to support a group that
thinks they are all "Novices."

NOT good PR to attract membership.

>-and- the big one:
>
>New entry level licence with 100W on HF phone, plus simplified test =

>potential members....and voters....and customers.....

"Customers" they already got. Membership is lagging.

ARRL is down to a measly $12 million annual budget (according
to the IRS forms).

>amateur radio neighbours in the rest of the world.

They could have changed the Tech class name to something
they must be thinking of...like "Scum of Radio" or "Not Real
Ham" class.

When the BoD met, they must have arrived with their baggage
intact. Emotional baggage.

>Like, for instance, those just north of you have proposed to do - and
>that's likely to happen fairly soon, I expect.

I hope that powers-that-be in Canada are with those of us in this
millennium, not the fantasyland of olden days as in the League.

Did you say "market?" :-)

One in three Americans has a cell phone subscription; according
to our Census Bureau. Yet, a decade earlier we all got along just
fine with a relative handful of cell users. With the marketing blitz
still on-going for cell phone handsets, various user plans, all sorts
of attachments (including a little hands-free earphone-microphone
with its own little two-way radio), I'd say the marketeers have
pretty well established that side of telephony.

One in three Americans means a quantity of about 100 million.
At the end of 2004 some forecasters have predicted a worldwide
cellular telephone useage of over 2 billion units!

Think of it...2 billion little two-way radios...and not a single user
is required to test for any license or know morse code. :-)

And NONE of them "owe" any technology even remotely to
"amateur radio pioneering or innovation." Many U.S. hams speak
with contempt of the VHF and above region ("shack on the belt"
is a typical comment of our remaining newsgroupie bus driver).
Cell phones (in the U.S.) run at 900+ MHz.

People DO love to communicate, obvious to anyone at an airport
(among many venues)...even in supermarkets. Should be nothing
wrong with that except for the few that insist, nay demand, terrible
adherence to HOW the communication is done...along with
"official granting" of license, a permission to communicate. :-)

I think that is a mentally healthy outlook on a recreational activity.

Obviously some Ham Lifestylers in here will disagree. Those love
to endlessly self-enoble themselves as "members of a service,"
apparently thinking they are an asset to the nation. They are simply
making an asset of themselves.

I am greatly amused by the U.S.A. population's apparent NEED for
royal titles of any kind, status, position, quasi-nobility, and all other
alphabet soup kinds of name add-ons. Was only 228 years ago that
the U.S.A. declared itself "free" of royalty. Yet, here we are now with
some desperately clinging to a "higher royal class" of labeling. :-)

For those cling-ons, the U.S. amateur radio "incentive plan" was a
godsend establishing all those classes of license. To them the
incentive was to "upgrade" so they could sneer with contempt at all
the lower forms of ham life. Many still do, more's the pity. [some
have a visceral need to attack the preceived inferior ones, a mental
sickness which I doubt will cease in any form of human activity...:-( ]

Nice discussing something with you, Leo. [others will disagree...:-)]

>thing that she got out of Germany prior to the war! Hedy was not an
>amateur, and had no interest in radio.

That's been distorted from the original. IEEE Spectrum did a piece
on Hedy's (Hedwig Markey is the name on the patent) and George
Antheil's patent for a torpedo guidance device. Antheil was a friend
of Hedy's and involved in automated pianos such as an updated
player piano. Hedy had been married in Germany to a German
industrialist who was a munitions maker; one of the products was a
torpedo. Hedy wasn't a brainless actress and could grasp ideas.
Antheil already had some inventions going in music and they traded
some thoughts and concepts. Hedy had adopted the USA (or the
other way around) and wanted to help the war effort any way she
could (besides USO tours). The end result was an idea of a
secure torpedo guidance system using programmable audio tones
sent over a wire umbilical. It was doable with vacuum tube
technology then.

The patent was granted but never used by anyone! Eventually it expired. The USN and other nations using submarines and torpedos eventually developed wireline guidance of some torpedos but not with the system proposed by Markey and Antheil. For communications security, the USA already had AT&T to help in eventually developing a good voice scrambler so that the Germans lost their ability to eavesdrop on FDR's and Churchill's radiotelephone chats. That scrambler used shifting voice sub-bands and took up a small tow-behind trailer. Think of that as a parallel development in audio tone things.

Hedy Lamarr inventing CDMA? I don't think so. The origin of that myth lies with some magazine or wire-service staffer who didn't know enough about electronic systems but probably saw a trade magazine article. Code Division Multiple Access is an eventual descendant of pulse-position modulation multiple voice channel radio relay equipment. The 8-voice-channel AN/TRC-6 that we signalmen in microwave radio relay school at Fort Monmouth used as a training system has much more in common to the eventual digitized voice comm systems than a torpedo guidance system. General Electric had already designed a 24-voice-channel microwave radio relay system for commercial use and that was purchased by the US Army. The later evolution of digital pulse trains in telephony circuits was a direct predecessor to CDMA.

For that matter, the "rotor" encryption teleprinters of WW2 have more in common with CDMA. Those scrambled the teleprinter character code according to the rotor settings (actually multiple-pole rotary switches) to yield encryption without changing the basic nature of the 5-bit character code. The "Sigaba" of WW2 is an example, never compromised until the capture of the Pueblo years later. Spread-Spectrum techniques came out of work on developing encryption electronics along with Information Theory that had begun with things like "Shannon's Law" of 1948.

Aligning a material object with an exceptionally beautiful woman of considerable intelligence is totally terrific PR. In truth, a stretch of the imagination that makes bungee cords break. Hedy and George came up with a TORPEDO GUIDANCE SYSTEM...that was never used as such. The original story has been told. Distortion came later.

>Good ideas come from everywhere.

Absolutely. Even gorgeous actresses or handsome newsgroupies...:-)

>A question: what would not have been invented, or delayed, had the ARS
>not existed?

Ham Radio Outlet, the chain, would never exist. :-)

Newington, CT, would have a museum only of local artifacts.

This and several other newsgroups would be about something entirely different...but just as concrete-headed in its patrons as the others.

QSL card printers would have to go back to making picture postcards for sale at drug stores and supermarkets.

TVI in urban neighborhoods would have a different flavor. Ed Hare might have to go out and work for a living... :-)

The possibilities in any alternate universe are infinite. Everyone's ideas would be as "correct" as any other since there is nothing to base them on for "proof." :-)

In the wider world of early radio organizations (see Thomas H.
White's very notable web pages as well as print history), ARRL
was a relative latecomer in amateur radio. The one thing they
can claim is having survived the early competition in the USA.

[I'll have to use the USA as a reference here, no slight intended
against Canada, only against my meager knowledge of Canadian
amateur activities of earlier times]

ARRL, by their own history, began as a local New England radio
club largely organized for relaying telegraphy messages
quicker than was provided by commercial carriers. In reality that
is a form of "hacking" hardly different than the CD music stealing
that went on through the Internet in modern times. So, the 3-man
club got more locals and "organized" in 1914. The Radio Club of
America had already existed for 5 years and some of the RCA
members were very involved in amateur radio activities. [first to
use acronym 'RCA' but not aligned with RCA Corporation that once
was] The local ARRL club was small in 1914 and many national
clubs for amateur radio were much larger in membership.

The "League" effectively used PR and promotional techniques to expand, slowly adding on news and technical publications. It had very little of what it eventually became. Intense self-promotion (League publications themselves are excellent vehicles to do such things) kept their name/organization in everyone's mind. It fostered an image in many minds to make up for the generally solitary activity of one amateur listening for hours to static in hopes of capturing a weak telegraphic signal. Technology of radio was still quite primitive. The first two attempts at trans-national (USA) message relay were disappointing failures. Nonetheless, the ARRL kept up the PR and eventually made it through the competition for "national amateur representation." Competition included the formidable base of Hugo Gernsback's little publishing empire and his own attempts at building an amateur radio organization.

The key element in establishing the ARRL was Maxim's own funded lobbying in DC after WW1 to restore U.S. amateur radio. That worked, amazingly enough, and became the stuff of legend in much later League self-promotion...even 86 years later. Maxim became "president for life" of the ARRL and "served" until the 1930s. Sort of a private little empire which happens in all organizations eventually. That's not to decry Maxim's efforts but, in order to be fair, one cannot pin 'altruism' on Maxim's "service to the League." He was instrumental in starting it and no doubt was self-possessive about it.

With radio technology still not climbing the steep walls of exponential leaps and bounds in electronics technology in 1920, ARRL publications were about the only trade news available to the everyman hobbyist at that time. There was very little of the information media bonanza we all enjoy today. Knowledge took time to spread. League publications helped that since they weren't involved in patent disputes (many, many in the 1920s, 1930s) or various groups' attempts to control radio or trade secret developments that industry was jealously guarding. ARRL pubs were an EXCELLENT vehicle, a medium for self-promotion and the League didn't hesitate one bit to keep on promoting itself.

>professional users of morse signalling today). I believe that it
>would be a 'special interest' thing for people who wanted to play
>around with it.

There are MANY and varied groups of hobbyists involved in
electronics today and many of those existed before personal
computers began. "High fidelity" music/sound was one though it has
shrunk to a niche market now. Robotics in general seems to be
the latest in interest, merging microcontrollers and machinery in lots
of different forms. Keyboard synthesizers had been a big thing with
the first of the lower-cost personal computers, but now simplified into
commercially-available programmable music machines. A close
look into the availability of parts and materials at various smaller
merchandizers on websites will show that there is great interest in
electronics-oriented experimentation and hobby work besides just
radio communications. Merchants are a good barometer of where
the hobby work goes on...it's a cruel market where only the larger
interests survive (regardless of individual favorites)...merchants can't
pay bills with altruism. :-)

>I wonder, though, if in the absence of Amateur Radio, something else
>might have evolved to meet the need of having extra trained people

>though - Amateur Radio doesn't cost them much (if anything) to
>mobilize.

I personally doubt it on scales larger than local, urban groups.
Radio - on the larger scale of human activities - is an established
medium of communications used by government and business on
a large scale. It's not a mystery or magic that it once appeared to
be in the 1920s or 1930s. Radio is far more widespread in society
of the USA than all of amateur radio in North America.

Use of a radio is ridiculously easy with existing radio equipment of
the 1960s era, not just that of the 2000s. Government and business
HTs on VHF-UHF are more numerous than amateur HTs in the USA
and have been so for more than 30 years. What is needed, if anything,
is the coordination of groups involved in "needy operations," the
control-and-response protocols, organizational structures to get the
various tasks done. That doesn't need specialized "radio training,"
just group organization. Police and fire people use radios every day
without any special classes in radio innards, often with just a few
minutes of personalized instruction.

>
>Unfortunately, yes. And many other unfortunate events may well have
>become much disasters or have increased in magnitude, as there would
>have been far less people monitoring the bands and detecting /
>relaying emergency traffic if the ARS had not existed.

Would there be? That MIGHT be true in 1912, 92 years ago and 2
years before the ARRL existed. The international martime distress
frequency of 500 KHz had not yet been implemented in 1912. The
distance to land was not that great and the radios of that time were
not sensitive in receiving although some of the spark transmitters
where "high power." Had that happened in the much larger Pacific,
farther from land, or in the southern Atlantic or Indian Ocean, it
might have been a whole different story.

Pro-coders are quick on the trigger to trot out OLD tales of "need
to relay traffic" when there is NO need to relay any traffic today or
even four decades ago. GMDSS was implemented by the Maritime
Community to replace the old 500 KHz Autoalarms. That there
haven't been that many maritime disasters since is a tribute to
modern day shipbuilding and education/experience of ship masters.
The highly-touted 500 KHz frequency didn't save the Andrea Doria
from sinking back in 1956...or prevent the collosion with the
Stockholm. The international civil aviation community has had
121.5 MHz as an emergency frequency since 1955, several SSB
voice frequencies on HF since then for over-ocean flights.

Here in Los Angeles we just had the 10th anniversary of the Northridge
Earthquake. Widespread destruction and 60 deaths as a result. The
entire primary electrical power distribution was cut off for hours. The
area IS organized, trained, drilled for this sort of thing and it functioned
very well using the infrastructure of government-utilities-business
communications, both wireline and radio. Amateur radio did not aid
in that until about two days later. Utility crews had their hands full
trying to restore power (successful), repair damaged lines and streets,
clearing away some toppled buildings. Fire departments rolled as
needed, their stations and vehicle communications functioning fine.
Hospitals and care centers all had emergency electrical power, more
needed than "health and welfare message traffic." We survived.

>> "Independence Day" would have been

>
>Without the ARS, one indeed wonders how long companies like
>Hallicrafters and National would have survived - after WWII, amateur
>radio was a large part of their market.

Not as much as you would believe. Bill Halligan's Chicago company
was busy with both prime and subcontracts for radio equipment,
including the famous BC-610 used in the SCR-299 mobile HF
station. Hallicrafters was busy with making HF radios for the
commercial and government market, not seen in popular ham
magazine ads. National Radio made a name for itself with the HRO
receivers sold also to commercial and government buyers, again not
that much advertisement in magazines. Very unlikely makers of
things got into the radio manufacture arena during WW2, such as
Lewyt Vacuum Cleaner Company who made some of the BC-339
1 KW HF transmitters I QSYed a half century ago! [name was on
the ID tag riveted to the frame...:-)]

Paul Galvin's Motorola-to-be (also in Chicago) was cranking out
the BC-1000 walkie-talkies (backpack VHF transceiver) of WW2
after stealing Dan Noble from Link, Link doing pioneering in mobile
FM radio for police departments...which led to widespread use of
mobile, channelized FM transceiver for land vehicles. Galvin was
also organizer/central-point for the number 2 priority of all U.S.
WW2 manufacturing (second only to the Manhattan Project) of
quartz crystal units. Better than a half million crystal units a
month made by over 30 U.S. companies for the last three years
of WW2...all for the military communications needs of the USA
and Great Britain.

>Could they have hung on by
>just selling radio equipment to SWLs listening to foreign commercial
>broadcasts?

No. No need. After WW2, there was a big (but not widely advertised)
push in other areas. Motorola went after the police and government
mobile FM radios along with other makers. Collins Radio, already big
enough in military-commercial radio, got a boost from SAC contracts
for single-channel SSB and various military land radios. RCA also got
into the single-channel SSB race, designed some, eventually dropped
out of much of the military market. Civil aviation got going on VHF AM
comm-nav and UHF radionav radios for aircraft after 1955 and the ICAO
decisions-allocations. Military TACAN had morphed into DME for civil
aviation, civil folks having develped VOR for bearing to ground stations.
National Radio Company continued for years to build radio systems

for the USN, past 1970. Collins continues to be a standard for excellence in aircraft systems.

Many of the makers of today's radios for commercial-government use aren't advertised in "popular" magazines because that's not a target market area. ITT in Fort Wayne, Indiana, designed (and redesigned) the SINCGARS basic small-unit land forces radio...between them and the former Land Division of General Dynamics in Florida, a quarter million sets were produced beginning in 1989. That's more than about a hundred thousand AN/PRC-25s and -77s made since the early 60s (VHF, channelized, voice only, used in Vietnam and elsewhere). One of the Hughes Aircraft divisions designed and made a bunch of the standard HF R/Ts for land forces (AN/PRC-104 for manpack version, 20 W PEP, automatic antenna tuner) beginning in 1984. There's a whole heaping glob of various military electronics produced by many since the end of WW2, too many to recount here.

Very little of that is evidenced by ads in ham magazines. Hams don't buy the stuff new and surplus radios don't generate money for the original manufacturers. It WILL be familiar to those of us who have worked in the electronics industry.

Nearly all the "radio" makers of 1945 tried their hand at TV sets for civilians. Hallicrafters did (with a push-button channel selector!), so did National Radio (I bought a 7-incher in 1949). Most dropped out in the intense competition. Eventually all the U.S. makers of TV sets went belly-up although the Indianapolis division of Thompson-CSF (the old RCA Corporation plant there) still makes some color TVs on-shore. General Radio, who long ago quit making radios in favor of precision instruments, eventually dropped out. I don't know why Hallicrafters quit or what happened to National Radio other than concentrating solely on government stuff. Collins Radio is alive and well but long out of amateur markets.

Icom, Yaesu, and Kenwood probably make more commercial-government radios than amateur equipment. Those are the triad from the Far East that beat the commercial pants off North American communications radio producers...except for some specialty divisions of General Electric and Motorola (two as an example in mobile radio market). Some of their commercial, non-amateur market radios are being sold through chains like HRO, but otherwise few amateurs get input from ham publications on that side of their business. All three do good in design and manufacture, are innovative and dare to hit the market with new things.

>Some companies may never have started up in the first place, as their
>beginnings were entirely in amateur radio.

Before or after WW2? Bill Halligan was a ham, also Art Collins, just two early examples. Collins Radio survived and prospered, Halli-crafters didn't. The reasons aren't simplistic. Business, to survive and grow, needs a lot of things and niche markets aren't successful

for the ambitious growth plans of some. Diversification may be necessary as was the growth of General Electric Company and its many divisions...RCA Corp was spun out of some of those and eventually GE bought RCA back (irony!). :-)

Whether or not specialty or niche-market companies survive depends on the founders and what they want to do. They may develop a fantastic reputation through clever PR and create an intense, loyal following, but the eventual color of bookkeeping ink can catch up to them. Adulation of customers doesn't pay bills...customers have to keep buying, write checks, not write peans of praise. Business is TOUGH.

As I mentioned in one of the other newsgroups, we need to divisions to protect us from our own rudeness. I just don't see us as being that good in following voluntary band plans in the heat of a contest or whatever. Excluding Japan, the US has more amateurs than the rest of the world combined. The rest of the world isn't too good about following band plans in contest either.

I exclude the Japanese as many of their licenses are for quite low power. In addition, many of the Japanese are inactive. They were licensed as kids and since they issue them for life, they stay in the database forever.

It is only the 40m band that is inconvenient with the current splits but the first steps to correct the situation have already taken place. Last summer's international treaty changes have directed broadcasters to move out of 7.1 to 7.2 and it will be allocated exclusively to amateurs world wide. I forget the implementation date though. However, perhaps eventually ITU regions 1 and 3 will eventually enjoy the extended 40m privileges that we have here in region 2 as amateurs continue to work on this issue.

Why single out the ARRL? Almost every organization and our national political scene is the same way. A few active people get out and vote. A few active people get out and do the work. These are the people who always have and always will shape policy. Yet those who are unwilling to vote or do the work continually whine about how they are not represented. It is the same thing throughout our society. The ARRL is not unique.

Actually I wonder if the ARRL petition isn't a crafty ruse. It will look good to people who want what it proposes but has high odds of being rejected by the FCC since the FCC has a long history of shooting down automatic upgrades. They get the "attaboy" for "trying" and can then lay it at the FCC's door when it fails even though they may want it to fail.

This will crowd the CW/digital/data modes too much since there are so many US hams. It would be better to wait for the other treaty changes from the conference to take affect and synchronize Regions 1 and 3 with Region 2. You do know of course that the treaty now requires broadcasters to move out of 7.1 to 7.2 and that this will become an exclusive amateur allocation. I don't recall the timing but it is required in the treaty. Perhaps someday, the ITU will open up the 7.2 to 7.3 to the other regions. In the meantime, 7.150 to 7.200 could be a worldwide phone allocation. This is actually more space than either of the suggested proposals.

The why is actually quite simple. The potential ham viewed it as being able to take the trip into ham radio in small, manageable, bitesize chunks instead of having to swallow the entire steak in one gulp. That perception is what caused the growth whether or not it represented reality.

Dwight, that's what I meant about the "fantasyland." With so few clues on another person (especially with morse beeping), it's a wonderful opportunity to imagine all sorts of things about the other radio operator. :-)

Unfortunately, too many apply the same fantasy-imaginary things to a computer screen.

Blend all of that in with: (1) A NEED to belong...to something...to anything; (2) A need to VENT daily frustrations, take them out on another who cannot possibly harm the venter...and you've got the recipe for Instant Flame War. :-)

The League has constantly self-promoted itself and many have
allowed that self-promotion to brainwash them into thinking they
are this tremendous asset to the nation, are gifted radio operators
who stand ready to jump into action to save something whenever
called, and are better than ordinary people. Combined with an
honest-to-gosh Federal Certificate (suitable for framing) and they
start taking themselves sooooo seriously. They slip off reality and
enter the Twilight Zone of their imagination.

Amateur radio is a fun hobby, a recreational activity for personal
pleasure...but...a few NEED the status symbolism, the Titles,
all the pretty adornments to show off to others...instead of doing
an enjoyable thing with radio. As a result the U.S. got this
"incentive system" of professional-like rank-status (classes of
licenses) in an avocational amateur endeavor which is not a guild
or union or anything else but a hobby. Rank-status-privilege are
the thing, not the radio communication.

The League now wants to revisit all of that with Their Plan, complete
with emotional loading of the "Novice" name for "entrants." Gee suss,
are those 15 old men so out of touch with reality that radio is still
"new" or "mysterious" to the general population? Don't they under-
stand that radio is in widespread use in other radio services and that
there are hundreds of thousands of non-amateurs who have used
radio for years? Weird, wired apprentice-journeyman-master in a
still in a HOBBY activity!

It's like the Twilight Zone on a bad hair day...

>> U.S. amateur radio seems to be another
>> center for national misogyny. It is a hobby
>> activity engaged in largely by white males.

>everything in this world has to be all inclusive (to each his own). While
>some will obviously always want to exclude, it isn't more commonplace in
>Amateur Radio than elsewhere.

I disagree but won't press the point.

Just think of before 1960 the Civil Rights Laws. The atmosphere
might refresh the memory. Look at the pictures of hams in the
US shown in the ham publications. Check out their legal names.

The various ARCs encourage members "like them" which means
white male adults. Women are categorized as "special," not quite
on par with the men; wives are always "EX-young-ladies" regardless
of their real age. In many places it is like the 1930s and 1920s in
attitudes. Sometimes with members' radio smarts to match...even
if they've memorized every single radio ad in QST for the last 20
years.

But, all must march to the same drumbeep, close ranks and cheer the leadership. Keep those 1930s and 1920s feelings alive. Ham radio is a SERVICE and every newbie (to hamming, not radio) has to "learn their place" or the "NCOs" will have them "get down and give them twenty." Lifestylers. Narrowed in focus almost to tunnel vision.

It's not completely like that, of course...but there are just enough of the Lifestylers to allow them to force an eliteness de facto if not de jure. They don't see it even when looking in a mirror. :-)

> enough???
>
> 73,
> Chuck...K1KW

Huh ???? Yepper I would like the Liberty Net right at say 7040 when I operate QRP . Yes that will make it a real challenge. Maybe we could get certificates for being able to copy 5 letters in a row. You are absolutely right Chuck .....I need to hear about someone's gall bladder while I am on with another CW station ...a real "improvement" for ham radio. Ya know I also need to hear some foul mouths while I am running the Pactor as I am not getting enough porno on my e-mail listing. Yep it is archaic all right ...but it does maintain my ham radio sanity if there is such a thing. But wait I could go out an buy a 1kw amp so I could enjoy my mode of operation and at the same time be a positive force for hamming by getting into the retired school teacher's organ next door. Boy this is opening a whole new world of enjoyment for me to contemplate.

Are there not enough fone frequencies to communicate on? Are not the CW segments just as dead as the phone segments when the band is out? God bless you if you want to operate fone ...have a good time but the idea has gone beyond booting the test to booting the mode. Then I would have to ask the question why. There must be some pretty deep seated hatred out there of CW and CW ops. But in the final analysis I guess my love of an elegant, narrow banded and relaxing mode should give way to the "gall bladder" kws ...to do otherwise would selfish on my part.

God Bless 73 KI3R Tom Popovic Belle Vernon Pa.

ps in answer to you last question ...we are better for it....

True enough - I'd sure hate to give up the title of "Technician" for
"Novice". People would think that I became a Nun....well, some
might....

The system up here is different. We are not structured in "classes"
like the US model, per se. There are (at present) two licence
classifications - Basic and Advanced - and a 5 wpm Morse Code
endorsement. Each licence gives the user operating priviliges in line
with their technical knowledge.

"Basic" allows full access to all frequencies above 30 MHz - add the
Morse endorsement, and they have full access to all of the amateur
radio spectrum, including the US Extra subbands :oO) . There are
reasonable output power limits, all transmitting equipment must be
commercially built specifically for the Amateur service (no kits), and
they are not allowed to sponsor or act as control operator of a club
repeater. (and a few others).

Pass the "Advanced" test, and these restrictions are removed. You are
assumed to have proven that you have the technical knowledge required
to operate high power equipment safely, or construct (and understand)
your own transmitters, etc. In theory, anyway.

It is possible to hold an Advanced licence without Morse Code - they are not linked in any way. Because of this, there isn't nearly as much of the "I'm better than you" mentality here - an Advanced without code has less operating spectrum than a Basic with code, but he may only be interested in operating the local club 2-meter repeater - different goals, different licence. Different attitude.

Our ARRL equivalent, the Radio Amateurs of Canada, has proposed to retire code completely, and increase the level of knowledge demonstrated on tests to improve the quality of folks entering the hobby. An additional level has been proposed - "Intermediate", which would be the first level allowed HF access here. Testing for this level would eventually be geared towards specific knowledge required to operate on HF. I'm not a fan of this one - I'd prefer that if Code is to be dropped, then drop it and allow those without the Code endorsement full access to HF. Makes more sense than trying to create an artificial middle licence - HF really isn't difficult enough to use to warrant it, I'd say. I figured it out :)

What will happen is anyone's guess - but there is no rigid class structure here, and most of the hams that I have spoken to feel that there won't be any mandatory Morse here for much longer either...that is just as emotional an issue here as in the US, BTW - but only an emotional one, all the same. The world is changing, and we have to keep up!

Len, I must admit that I fully agree. It took me over a half hour to
read through and absorb all of the information that you presented in
your three replies on this subject. That's an excellent depth of
knowledge you have there...

I learned a great deal, stand corrected on a couple of points, and am
following up on the Web on some of your referencess for more
information - fascinating stuff!

Much appreciated!

I have always been amazed at the versatility of some of the companies
engaged in WWII production - it would be no small feat for a company
manufacturing vacuum cleaners to retool their lines and train / hire
staff to build a 1 KW radio transmitter to mil spec.

...or the Rock-Ola Jukebox Company cranking out M1 Carbines.

Incredible!

I (W5TIT) have an appropriate callsign (W5TIT). The word "tit" (not the callsign W5TIT) is not (the word tit) appropriate for use on the amateur radio bands (but the callsign W5TIT is). And, the word "tit" is *not* used on the amateur radio bands. Well, not that I (W5TIT) know of anyway. The callsign W5TIT is used on the amateur radio bands and is quite an appropriate callsign (W5TIT that is).

How can I (W5TIT) be more appropriate than that?

Kim W5TIT

Leo,

Lest anyone be confused, the above statement is not correct. It
is in error, mistaken, false, misleading and just plain wrong.

The ARRL proposal wants existing Technicians to get a
free upgrade to General, not a downgrade to Novice.

Direct quote from ARRL:

"The middle group of licensees--Technician, Tech Plus (Technician
with Element 1 credit) and General--would be merged into a new
General license that also would not require a Morse examination.
Current Technician and Tech Plus license holders automatically would
gain current General class privileges without additional testing."

Truth triumphs over error once again.

It isn't that we don't have enough 'fone' spectrum as you call it, we do.
No, the problem is that we can't operate phone on all the frequencies that

the DX can. This is true on 80, 40, 20 and 15 (30 too, but let's not go there).

On 40 it is worse, as we have none of the frequencies available in Region 1 (Europe and Africa). This latter problem will eventually be fixed as 7100-7200 will eventually be worldwide.

As you don't work phone DX I wouldn't really expect you to be aware of this, much less care, but there it is. I have no more desire than you do to see any 'gallbladder nets' further down the bands.

That's not what I read. As far as I know it is in a law that was sponsored by the late Senator Barry Goldwater, K7UGA.

Yeah, it's so "appropriate" that Riley Hollingsworth said that your decision to
request such a call sign has the potential to bring the ARS "...one step closer
to extinction."
Somehow, I think I value his judgement much more than yours.

Bruce:

Sure it is. All we need to do is impose term limits on the Board of Directors and the Section Managers, and get some new thinking involved in the League leadership every few years or so. However, since the BoD makes decisions on such policy matters, do you think it will happen? As Lennie Anderson would say,

BWWWWAAAAAAAHHHHHHHHHHAAAAAAAAAHHHHAAAAAA!!!!!!!!!!!!!!!!!

I would be OK with that only if the Techs got only a limited licence. I would have no problem with giving Generals a full licence. Of course, to be fair you would have to extend that to Techs with old Element 3.

Of course I do, but do you think they will really move? Some may, but I
think some of them never will.

> I don't recall the timing but it is

I'm assuming that this will happen anyway. I just meant that 7075-7100,
where of course there is already phone, would be more use to phone ops than
the proposed 7125-7150, where there isn't.

Again, nobody else uses code anymore. Code made good sense back
50 years ago during the vacuum tube radio era. Simple equipment was
all that was needed and given the reliability of vacuum tube stuff voice
could likely fail when needed. But today's equipment is all made with
chips and quite reliable. And digital modes like packet can handle
automatically
health and welfare traffic code used to do, with less operators needed.

Let's say that 4 years experience as an advanced is equal to element 4B
(the old extra written an advanced used to be able to take to get his
extra).
So make the advanced turn into an extra next April.

Are the digital modes more tolerant of SW broadcaster QRM than SSB? If so,
move the digital modes to 7150-7300 and voice 7000-7150. If nothing

else, it would help chase the SW broadcasters away...

Thanks for posting this again, Larry. I didn't say anything when I first read it, but I remember having some doubts - doubts which still linger to this day. The most obvious is why Riley singled out Kim for this admonishment, without mentioning W4TIT (VA), W6TIT (TX), K5TIT (FL), K6TIT (CA), N0TIT (FL), N4TIT (FL), W1ASS (MA), W2ASS (MA), W4ASS (NC), W5ASS (TX), and similar callsigns. In other words, Kim's callsign, and similar callsigns, are not exactly unique.

Clearly, letters only become vulgar when one attaches a specific meaning to them. Without a context to make "TIT," or other such letters, vulgar, I can't really envision a "parent or uncle or grandparent" keeping a child out of Amateur Radio simply because those letters appear in a callsign.

Finally, I noticed most of the callsigns above belong to males (all except one, a club call). The absence of any comment about those callsigns (from Riley, you, or others here) makes me wonder if a callsign with the letters "TIT" only becomes vulgar when used by a woman. Would Riley say those callsigns bring Ham radio "one step closer to extinction?" Would Jim omit those callsigns from his list (the topic this thread spun off from)? Would

you as aggressively challenge one of those guys, like you've done with Kim, if any one of them were active in this newsgroup?

The ARRL's latest licensing scheme is driven by money.

The league will achieve its goal by spreading cash to the correct
FCC managers. The FCC has no shortage of corrupt
management officials, ready to accept a bribe for anything.

ARRL is no friend of amateur radio.

Moe

Another interesting little snippit... If I recall, it was only after I
"took on" some of the things Larry (and his ilk) was posting that he decided
to take a dislike to my callsign.

Makes one wonder if it is the callsign that is the reason for the attitude;
or that they just plain dislike me and can't think of any other way to
express it. Kind of like when I say something that would--under normal
conditions--stand on its own without the chance of drawing fire: just
because it was me that said it, there is disagreement that will be found for
it.

I think it's all that "other stuff" that comes into play. Riley was
probably closer to having a real opinion about my callsign than Larry or
anyone else here is. He was honest and forthright about it, and dignified
in his response. Larry seems to think it's "disrespectful" to disagree with
Riley's opinion--why I don't know. Riley is a person just like anyone else
and is entitled to his opinion. And, since the ARS is no closer to
exctinction today than it was prior to my ever getting a license, I totally
disagree with Riley.

Oh, I can. If they're prone to "protecting" their little tyke from the
evils of the world--in every way but actually dealing with the little tyke,
i.e., making it everyone else's fault but their own that their little tyke
is actually a little monster. ;)

Fact ot the matter is my callsign is not vulgar, it is not disrespectful, it is not inappropriate. It's nothing more than a vanity callsign that brings out other peoples' vanity (here in this newsgroup anyway) way more than it even expresses my own :o And, it works great working DX and pileups--when I used to do that! ;)

The statements of those who voice the strongest objections tend to
support your observation, Kim.

Jim himself, who insists that it is just the "inappropriate callsign"
that bothers him, stated (regarding his negative opinion towards the
callsign):

"It wasn't formed beforehand. It was formed only after I encountered
the callsign and its owner here, and considered all the issues."

This statement indicates that it isn't just the call that bothers him
- it's a combination of the call plus other 'factors'. The 'package',
as it were.

Dave, in his recent posts, appears to harbour similar feelings :)

Anyone who believes that they can protect their youngsters from bad
language and sexual references by censoring what they see is deluding
themselves. They will hear worse things at the local schooltard than
they will on TV, radio or (gasp) RRAP....

Think of it as having walked in a very large circle for the past 40 Years.

:) :) :)

> Do you think that if everyone would just buy five copies of QST every
> month the League would give up attempting to license every deadbeat
> dad and upgrading every licensee that can recite QST?
>
> Win/W0LZ

Probably an accurate observation Win. All that the ARRL has ever been
interested in for the past 40+ years is more subscriptions to their ad
filled fishwrap. No suprise really as the ARRL's 501-C3 Charter lists
them as a non-profit "scientific" publishing company.

Looks like the Ivy League also has **finally** realized that the Incentive
License disaster of the 1960's pretty much trashed ham radio.

Now their franticly trying to back-peddle the boat before it finally goes
over Niagra Falls. Not much you can do, seeing that 99.5% of young
persons are more interested in Ipod, Blogging, Chatrooms and other
Net related projects instead of this old antiquated hobby of their
granddaddy called "ham radio". (It used to be that ham radio was
unique in that it was the only alternative to making a long distance
telephone call to speak with someone far away. Today anyone can
do the same with a $10-per-month ISP and a PC. The NOVELTY
of long distance communications for the common person has worn
off - this is the root-cause of the issue - ham radio is become obsolete.)

You have it slightly wrong Dan. ARRL is doing this to
try and fix what they screwed up by Incentive Licensing.
Of course we all know the horse left the barn long ago
and the fat lady from CT has already sung her tune, but the
great Newington publishing company has to do something
or risk appearing redundant.

(looks like Ole Herbie Baby was right about one thing
all those years on 14.313! They are indeed nothing more
than a non-profit publishing company)

I repeat...I NEVER said that YOU never worked in electronics.

PLEASE repost the item wherein I said that, Lennie, or accept that
you have been caught LYING once again.

> > The FACT is that I have spoken with people who KNEW you and wee
> >not impressed.
>
> Total utter bluffing BULLSHIT, sweetums.

Ahhhh...Expression of profanity from the allegedly learned and
professional mind.

Sorry you can't accept it.

> You've NEVER "spoken with people who knew me."

Yes, I have.

> Bluff. Bullshit. Very bad poker playing skills.

Not when it's not a bluff, Your Scumminess.

> > The FACT is that YOU refuse to accept that your "professional"
> >and military "experience" is NOT Amateur Radio.
>
> That was never a subject except in your disordered little mind,

Sure it is...Tons and tons of recycled trivia about PLMRS, ADA,
your alleged contributions to the space program, etc etc etc.

> Radio is radio. It all works by the same principles of physics. It
> doesn't "work differently" because some lawmakers create different
> "services" for it.

Thank-you for (again) proving my assertion.

It's NOT about the PHYSICS of radio, Lennie...It's about the
application and practices associated with AMATEUR radios.

Rest of usual "I am so impressive" rantings snipped.

YOU already proved MY assertions.

Putz.

Well?

Think about it - what exactly *should* an entry-level license do? If
it insures that newcomers know enough to keep out of trouble (on the
air, anyway,) gives them a sample of what amateur radio is about, and
inspires them to learn and do more with ham radio, isn't that just
about perfect?

How much is it reasonable to expect a newcomer to learn in order to be
turned loose with ~100 watts on parts of HF and ~25 watts on parts of
VHF/UHF?

Only because they don't have 7100-7200. US hams outside R2 are rare
enough to be conidered "DX" anyway.
>
> Read it again. *US* hams outside R2

I did. As they get 7100-7200, any reason to have 'phone below
7100 goes away completely.

But is there really any reason not to simply continue those license
classes? That's a much, much better option than freebies or removing
privileges.

Why would Techs be singled out for a limited license? They have full
privs above 50 MHz.

> I
> would have no problem with giving Generals a full licence.

By your reasoning, there's no reason to have the Extra, then. Nor its test.

> Of course, to be
> fair you would have to extend that to Techs with old Element 3.

Where ya been, Alun?

Techs with old Element 3 (licensed before March 21, 1987) can get a General
license *today* with no additional testing. Just show up at a VE session with
proof of such license, fill out the 605 and pay the VE fee. Instant General.
And if such a ham can pass the Extra written (might as well try, the same
VE fee buys that test too), they get an Extra.

Been that way since April 15, 2000.

You try to embellish your NG "rep" by associating yourself with
Korean-era Army KIA's...get caught doing it...then try to redirect the
attention away from yourself.

Add coward to scumbag and liar.

Jim,

I sense a fair amount of hostility in your reply - I see that you are even taking issue with the statements that I made in agreement or support with several of your earlier points. I can also see that to expect objectivity from you on this issue would be impossible as well, as you continue to hold up your "standards" in defense of your actions, even where they would not be compromised at all. You also adhere to the principle that it is only Kim's callsign that you find "inappropriate", yet you have also stated that this decision was based upon your consideration of not only the callsign, but other factors: (the following statement was with reference to your opinion of the appropriateness of the callsign):

"It wasn't formed beforehand. It was formed only after I encountered the callsign and its owner here, and considered all the issues."

This statement points to a much deeper issue than just a simple "inappropriate" callsign.

The use of one's own moralistic views and beliefs to deny the rights of another is "inappropriate" too, Jim.

But, if you wish to further moralize upon this issue, I refer you to the ultimate authority, with all sincerity and best wishes:

God, grant me the serenity
to accept the things I cannot change;
the courage to change the things I can
and the wisdom to know the difference

May you find peace and comfort with the world, Jim.

73 es 30, Leo

And you know this, how?

Let's think this through. We're talking about ham radio, right?
Someone at ARRL is going to risk jail time to funnel personal or
League funds to corrupt FCC officials in the hope that by doing so,
the proposal will become reality. Then, when it does become reality,
there will be a HUGE increase in League membership, and said ARRL
person will presumably siphon off huge profits (again risking jail
time) and live the good life ever after.

Meanwhile, the FCC bureaucrats are going to risk their jobs and jail
time to accept these funds and push through this crazy proposal. Then,
they too will live the good life ever after. Oh yeah, that's real
plausible.

An entry level license test should expect knowledge of how to know what
frequency
your transmitter is on, what mode, the subbands for which modes, how to
identify
RFI problems (harmonics), simple antennas, rules about IDing, no
business traffic,
operating (pick a frequency nobody else is using to call CQ, but once
you're done
it's not your frequency anymore), simple emergency traffic operations.

>

Aside from propagation, there's really little difference from HF and
VHF/UHF.
Questions like "Is 80m likely to have good propagation for DX during the
daytime?"
don't really address issues of safety and interference to other
services. A beginner
will soon learn on the air what times and bands make sense for DX
operations.

Why, no otehr service uses code anymore, and more modern data
modes now exist. Yes, they require more advanced equipment, but
modern equipment is much more reliable than the vacuum tube stuff
we had 50 years ago. NASA's JPL doesn't use Morse code with
the Mars probes. And that's really hard DX to do.

Not that I can see. But if there is a problem, well, let's call 4 years
of experience as an advanced the same as passing the old element 4B,
and make them extras.

Maybe designate some subbands for new and experimental modes as
primary, and allow older modes on a secondary basis. That is, you
have to accept interference from them, and not cause them interference.
And encourage new methods of modulating the RF carrier directly
instead of say 2m packet where everyone just injected the modem signal
into their FM voice mode rigs. Not efficient.

>>>
>>>
>>>>>>>Old Novice subbands replaced by additional CW/data

Maybe we might want some Morse code beginner subbands where new users
can feel comfortable operating and not get blown away by experts. As an
informal gentlemen's agreement. Need not be much bandwidth, a few "CW
channels"
should be enough.

Maybe we all should move voice to the bottom of 40m, and create a new
subband for
modes that create bad QRM to the broadcasters who don't vacate? :-)

The medical wavier issue would pop up again. And the FCC doesn't want
to deal
with that. As I (mis)undestand it, all you had to do to get a wavier
was to tell your
family doctor you had this problem with the code, and all he had to do
was sign off
on it. Most doctors probably didn't understand the issue beyond that
there was no
safety issue involved ("What, you can't learn how to drive a bus, well,
here's a
wavier to take to the DMV to get a commercial driver's license") and it was
unlikely that anyone would question the doctor about it. So it was
easily abused,
and the FCC doesn't want to deal with it. And the FCC doesn't gain anything
out of requiring higher speed code (it's not a lid filter, as witness
14.313 before
restructuring).

They certainly are. The term "Novice" was a valid choice back when the
Novice license was a one year drop-dead entry ticket. Novices
absolutely were novices in the real sense of the term back then, we
were all raw beginners. Continuing to use the term today when a
"Novice" can hold the license basically forever is not only an
oxymoron, it's also reeks of maintaining the worn out old "pecking
order" crappola. Call 'em "Tech IIs", call 'em anything which doesn't
infer that a 30 year Novice is just a newbie getting his feet wet in
ham radio.

Asinine.

It's obvious, at least to me, that one major bottom line intent of the
proposal is to foster more activity on the HF phone bands. If the
proposal is adopted I expect that objective might be met so I support
the basics of the proposal.

James I fail miserably to understand why you're so adamantly opposed
to the free passes. How exactly do you see the proposed free passes
having any real-world adverse effects on the service? Or how would
these free passes infringe on your privs and operations to the point
where you have such a big problem with 'em?

Nope. Not if ya expect HF newbies to even try CW. If newbies don't try
it we might as well drive a stake in mode now and get the pain over
with.

There was that window of time from Jan 2000 to April 14, 2000 where one
could take the
extra written, pass it, get the CSCE, and cash it in on April 15, 2000.
And then have
your extra. And not fail the 20wpm test because he didn't take it. I
did this and also
took the advanced written (was an old tech plus), and cashed in the
CSCEs April 15th.

But those advanceds didn't do the extra writtens (4B). So, if the extra written is "worth"
more than 13wpm, then todays' extras have higher standards than the advanceds'.
Depends on how you call it, if element 4B > 13wpm or not.

Brilliant idea! Now that's what I call lateral thinking. It'll never happen
though.

I suggest:-

7000-7045 CW/Digital
7045-7100 Phone
7100-7150 CW/Digital
7150-7245 Phone
7245-7300 CW/Digital

Nothing atall wrong with that, in fact it would be a major improvement.
It'll get me flamed, though!

>Len, I must admit that I fully agree. It took me over a half hour to
>read through and absorb all of the information that you presented in
>your three replies on this subject. That's an excellent depth of
>knowledge you have there...

Well, memory I still got...and a few years in the radio-electronics
industry. Glad to share it.

>I learned a great deal, stand corrected on a couple of points, and am
>following up on the Web on some of your referencess for more
>information - fascinating stuff!

The Thomas H. White early (USA) radio history "papers" are
most interesting, putting into one place where I've seen it before
in many different texts...plus some oddities like the first radio
circuit to Catalina Island just off the Los Angeles coastline (not
seen before). White has lots of digitized photos to go with the
texts.

The Corning Frequency Control (quartz crystal making division)
website has a fascinating contributed paper (deep in its archives)
about the tremendous effort here to make quartz crystal units
during WW2. That one is written by a retired PhD who was part
of the war effort. Imagine being #2 on the national priority list for
strategic materials, second only to the atomic bomb! :-)

Motorola has supplied some of its history previously and reproed
some of that on its website. Paul Galvin's own book-biography
details more about the WW2 "handie-talkie" (in use before Dec 7
1941) and the "walkie-talkie" developed by Dan Noble. Noble was
lauded by the IEEE History Center for his pioneering design of
mobile and portable FM radio (the old SCR-300 was not crystal
controlled, but VFOed...a "calibrate" crystal oscillator checked the
dial hairline position...a bit tough on design considering the
environment it had to meet).

National Radio Co. put out a rather thick booklet of photos of its
first 50 years in the radio business...still have that along with a
"golden rule" (gold anodized 12" ruler) they gave away. Did you
know that one of the old National receivers was called a "Thrill
Box?!?" Yup. Ought to make the purists in here cringe all over!
[Bill Halligan should have thought of that...might have livened up
his Chicago works towards the end]

The "surplus restorer" fanatics have lots and lots of old information that is fascinating although some ascribe uneven importance and try to second-guess some of the reasons for doing designs the way they were done. One of the U.S. cosmetic companies in Noo Yawk Zitty once decided to make R-390 receivers on a mass Request-For-Bid by the government on later production (legal, the government owned the design originally done by Collins). Once the production chiefs saw the complexity of it - and differences from their cosmetics containers - they decided to simply buy some R-390s from another source, change the nameplates, and sell those at their too-low bid price. :-)

I've had the opportunity to meet with some of the engineering folks in this corner of the country and hear about projects in the works. One is Hughes Aircraft's design of the PRC-104 HF transceiver (I've been a HAC employee twice, once at El Segundo, again at Canoga Park) circa the early 1980s. That's still in service and comes with a vehicular mounting power amplifier for greater PEP and a higher-power antenna tuner. The manpack basic R/T includes an automatic antenna tuner! I finally got my own copy of the TM on it a few months ago...from, of all things, a U.S. Army CD! The world and military all changing. :-)

I've had lots of opportunites to see (up close and personal) the rest of the radio world...including the U.S. Army field comms for regiment size units at Fort Irwin, CA, the Desert Warfare Training Center. That was in 1989 and didn't have any idea of what lay ahead for applying such training a year and a half later in the first Gulf War.

The SINCGARS program is fascinating from a design standpoint in that it pulled together some totally tough things for a nasty environmental range...such as crystal stability and being able to frequency hop 10 times per second and remain locked in the net. ITT Fort Wayne did a tremendous job on that (in my book) and did an encore when they improved it to more functions in half the bulk. Harris up in NY state is doing a similar radio for UK military, compatible with the PRC-119 family. It's outlined on ITT's website. General Dynamics Land Division did some of the production and they had a website on it once...that division went bye-bye when they lost a production contract follow-on.

One only needs to keep eyes and ears open wherever one is. Lots and lots of information on the Internet now and even more in the other-than-ham-radio-history-by-a-large-US-club histories such as the old Electronics magazine (a biweekly from McGraw-Hill). It's surprising how MUCH information is available that is totally cleared for public distribution!

>Much appreciated!

If you need some links, let me know...preferrably in private...that way it isn't messed up by the hecklers. :-)

>> >
>> > But it might be a nice thing for VECs to do...

As best as I can follow it a statute made testing free for Novices, and a later administrative decision closed the class to new entrants. Obviously the FCC don't have to include in Part 97 a rule giving free testing for Novices whilst there are no Novice tests, but if they re-started Novice testing it would have to be free. I admit I could be wrong, but that is how I understand it, unless someone can show me proof to the contrary.

I don't see very many people having any great difficulty with the present Element 2, so why does it need to be easier? The privileges would be more than the old Novice as well.

To put it another way, why shouldn't the Techs have all those proposed HF privileges, since they have passed a test with more questions than that proposed?

Only when:-

1 - all the broadcasters have moved, probably circa the year 2100; and

2 - all the countries have 7100-7200, which might almost take as long

>>

Interesting seeing as how many of the ARRL's past proposals were turned
down.

No it only becomes vulgar when chosen as a vanity call for the purpose of
"getting in someone's face". If a person were to choose it because there
name was something like "Tonya Irene Tidwell" and they wanted their
initials, it is not vulgar. However parents are often careful not to name
their children such that the initials would give rise to unwelcome teasing
and other problems.

As I recall, the treaty language from the past summer requires the broadcasters to move out. It's not a recommendation and it's not optional. I think the year is either 2007 or 2009 (I forget and don't want to take the time to go look it up).

Since the equipment is already available, I would expect the various countries to move rather quickly on adding the allocation.

To the average lay person, I bet they'd agree that of the five
license classes, they think Advanced would likly be the highest.
I've never thought the EXTRA name conveyed the true sense
of the license being the highest overall.

YMMV

Which is the exact reason kim chose that call. Nothing more than to call
attention to herself. Some people have to resort to those type of things
for any recgonition.

I can do better than evidence, I can provide proof....

The governing regulation is &#65533;97.527 which allows, but does NOT require,
VEC's to collect reimbursement for examinations. (In other words, there
is no requirement that VEC's collect money for ANY examination.)
Collection of reimbursement is AUTHORIZED but it is not MANDATORY.

Back in the early-mid 90's the ARRL VEC decided not to collect fees for
Novice examinations. This pissed off the W5YI VEC who actually
petitioned the FCC to REQUIRE the collection of fees. FCC declined to
grant his petition.

Some may wonder why Stebie is hate-filled and angry all the time.
I may have the root cause of it -

A number of years ago Stebie found this newsgroup and jumped in aggressively. Straightening his Dill Instructor campaign hat and pinning on the Shield (Radio Cop) above his Hostile Action campaign ribbons, he challenged all opponents in his military manner..

When I replied, Stebie shouted "GET DOWN AND GIMME TEN!!!"

I told him "I have only $6.25 on me...do you take VISA?"

He's been angry at me ever since...:-)

>Think about it - what exactly *should* an entry-level license do?

Here's a few suggestions on what they "should" do -

1. When meeting an Extra in person, always salute and show
respect at all times as required by the Geneva Convention.

2. Always call Extras "sir" or "madam" as the case may be,
always using military courtesy. After all, amateur radio IS a
service..

3. If an Extra wants to use the frequency you are operating on,
apologize and immediately QSY to another frequency. The
bands really belong to him.

4. Allot 10 percent of one's income to the League. This is the
the tithe that binds better than duct tape.

5. Always defer to the Extra's desires. If they like a particular
boatanchor, profess to show an interest in the clunker and
praise them for their choice. If they can afford a top-of-the-
line expensive transceiver, express deep envy for same and
congratulate them on being able to go into hock to get it.

6. Above all, profess a deep and sincere love for morse code, the
most elegant and sophisticated means of communications used

by amateurs today. Always say you are working hard on code to demonstrate your committment to the ideals of the amateur community.

7. Remember that the Extra is Always Right in technical matters and never ever contradict him/her even if they make a moronic mistake about any radio theory or amateur regulations. Their rank/status/privilege plus that important certificate (suitable for framing) from the federal government shows that They Are Right.

8. In the Amateur Service try to remember General Order #1 - You will walk the bands in a military manner being always on the alert for "the rare one" and always deferring to an Extra's need to play on your frequency whenever they wish.

9. Never ever use any jargon or phrases that were not used in amateur radio prior to 1940. Use morse mode abbreviations wherever possible in written communications...to show a dedication and committment to the amateur way and that you belong with them, heart and soul. Even thinking of using 10 codes will get you excommunicated without forgiveness.

10. Always treat CB users as river bottom scum and call them all bad names and do not permit them to drink from the same water fountains as you do. They deserve to ride in the back of the EM bus...as they have for 46 years.

Gasp! You mean that the ARRL does NOT represent amateur
radio in the USA?

How can that be? Doesn't everyone write their Director/Section
Manager who will faithfully and honestly bring their views to the
Big Board?

Strange. LESS than a quarter of all licensed U.S. radio amateurs
belone to the League.

You mean that ARRL represents those three-fourths who aren't
members?!?

Does the ARRL represent any of those interested in becoming a
radio amteur?

True, but with the FCC they could butcher it up so bad that the Novice
equivelant would be Extra no code.

The point I have is the ARRL has proven beyond a doubt they are a bunch of
world class hypocrites. They trash ham radio with 'Incentive Licensing' to
FORCE hams to upgrade and 'improve'. Then 40 years later they totally
reverse themselves. Bullcrap. The league has shown their true colors to
me. Money Money and more Money.

The historical articles state that the FCC forced it down everyone's throat
and the ARRL tried to fight it.

>They certainly are.

How? Under the proposal, they get sizable chunks of four HF bands with CW, data
and 'phone. Plus
6, 2, etc. I'd give 'em a good slice of 20 plus all of the WRC bands. Plus 160.

>The term "Novice" was a valid choice back when the

>>
>> Another very bad idea.
>
>WHY??

Because if they want the privs, let 'em take the tests.

Heck, any Advanced who wants an Extra need only take Element 4.
Is it *really* that hard? Heck, the old Extra was earned by an 8 year old
in 3rd grade. Obviously a bright kid, but c'mon - how hard can the test
really be?

>> >That works out to about 60% of todays licensees would get a free pass to

>> be a problem for FCC to maintain the Advanced and Tech classes
>> the same way.
>
>It's obvious, at least to me, that one major bottom line intent of the

>proposal is to foster more activity on the HF phone bands.

Why? Do they need it? Why not foster activity on *all* bands and modes?

Besides, the problem ain't the license. Plenty of folks with the license but
no station set up. I mean, look how complicated and difficult it can be
for some folks to put up an end-fed wire...

>If the
>proposal is adopted I expect that objective might be met so I support
>the basics of the proposal.

What parts don't you support?

>James I fail miserably to understand why you're so adamantly opposed
>to the free passes.

Because there's no reason for 'em. Is giving all Advanceds a few more kHz on
80/40/20/15 going to get many more of them on the air? I don't think so.

>How exactly do you see the proposed free passes
>having any real-world adverse effects on the service? Or how would
>these free passes infringe on your privs and operations to the point
>where you have such a big problem with 'em?

Since I've had the big E for 34 years, it's kinda hard to imagine any
infringement.

The problem is that the freebies say that there's nothing essential about the
General and Extra writtens. And it's unfair to those who come after
GiveAwayDay.

>> >And while I personally don't support a Morse test for any license, if we
>> >must have a Morse test for Extra, then lets make it something 'Extra',

Hilarious!

I have actually encountered someone who actually thought he must be right and spoke down to me on the air because he had a 2x1 call and I was a mere 1x3. Never mind that I am an Extra (not to mention a BSEE) but just kept my no-code call. This must come under 7. Not as common as you might think, this one.

I have met many people who actually abide by number 6, i.e. they pretend to like the code, but they make only one CW QSO every 2-3 years. Usually, they are pro the CW test too. They never use it, but think the tradition is important. I am not talking about anyone here, AFAIK, but they are out there.

Numbers 1-3 sound fair to me, though, ROTFL!

Except for us up North, perhaps - we have 7.050 to 7.100 allocated as
SSB on our 40M band plan. There are a few Canadian nets that operate
there regularily, as well as quite a bit of foreign DX.

Fortunately, our band plans are guidelines prepared by Radio Amateurs
of Canada - not federally mandated.

Even though I support the removal of the CW requirement for any license, I find this to be an acceptable compromise. The reduction to three license classes has already happened, although the Novice license as proposed is actually a new license. Perhaps a different name could be found for it to reduce confusion with the current Novice license.

Do you really think you would like all the US amateurs jumping in down there?? Remember the population difference. We have a tremendous amount of activity on 40m voice on 7.150 to 7.300 until the broadcasts drive us off. If we had SSB access to that 7.050 to 7.100 used by other countries, it would be packed solid and nobody else could get in. Do you want that? Far better to continue the battle to get the allocation extended to 7.300 for all amateurs around the world.

Actually that doesn't seem like a very good example, "Leo". You'd get the same result whether the guy wore the banana in the front or in the rear of his pants.

Maybe your remarkable inferiority complex in just bubbling to the top,
kindly old gent. If you'd like, we can review some of your posts of the
past week, we can debate the matter of who tosses what.

> Is that what U.S. amateur radio has evolved into today?

What's it to you, Len. You aren't involved in U.S or any other amateur
radio.

> Certainly looks like it.

No, I don't think it looks like it, Len. This isn't amateur radio.
This is Usenet.

Actually, kindly old gent, you don't have it quite right. You may go to
http://whatis.techtarget.com/definition/0,,sid9_gci212127,00.html to
educate yourself. Afterward, you may like to take a look at the site
where such firmware upgrades are available for the Orion:
http://www.rfsquared.com/ Please note the first two words in blue at
the top center of the page.

> There is NO computer system anywhere in the world that will "download
> firmware."

It appears that you are quite mistaken.

Did you ever notice that those who do ice-skating commentary are often former ice skating champions? that those who do NFL commentary are usually former professional football players?

I think you've found your area of expertise, Leonard.

Unfortunatley quite true, unless their intended audience lives in your
town. Maybe we should still put our digital modes there, as CW and
such I think may not be bothered much by broadcaster QRM. CW
as it's narrowband and one could use a frequency a couple KHz's
away from the broadcast carriers, and other digital modes I think
may not be bothered by the QRM much.

um - I think that putting the banana in the back of the pants might
send a very different message, "Dave". And elicit a very different
reaction.

In front, they'd probably be embarassed by the obvious -um-
masculinity that appears to be showing. Red faces, can't keep the eyes
off it - like a big magnet....

In back - well, they'd hear what the guy had to say alright, but
they's probably never stop laughing when they watched him walk away.
Some may even be horrified....

One of these, though, would cause folks to stare at the guy in a
similar way to that experienced by many well endowed women every day -
you don't think that the banana in the back of the pants' would do
that.....do you?

YMMV!

Yep - with some success. FCC made it clear that they weren't going to leave things alone.

I remember those times - all kinds of griping and moaning about having to take more tests. Many hams back then felt that since they'd passed the General test they were *entitled* to all amateur privileges, forever. FCC said no.

The big mystery, though, is why FCC got all fired up back in 1958 and started making noises about changing the system, only 5 years after they'd done the Big Giveaway of 1953. My best guess is that they had a serious case of Sputnik Fever.

How did "incentive licensing" trash ham radio? btw, it was FCC's idea,
and they made it clear they weren't going to leave the system alone.

>Then 40 years later they totally
>reverse themselves.

Who? I don't think there's a single person at Hq or in the Board of Directors
today who was a League official of any kind back in the '60s. Most of the '60s
BoD and Hq folks are dead.

So it's a completely different bunch that reversed the policies.

The whole argument is kind of moot, Leo. Some women seek out the attention, witness padded bras and surgical disfigurement that some women go through in order to be stared at.

I think the best defense against someone who leers is to simply mention it. Most will be mortified, and those that aren't are jerks anyhow.

In fact, it is all of the above, but, I guess you're entitled to your
delusions.

>It's nothing more than a vanity callsign that brings
>out other peoples' vanity (here in this newsgroup anyway) way more than it
>even expresses my own :o

What it is bringing out is other people's disgust. However, anyone who would
have the poor taste to request such a call sign would also not be very likely
to latch on to other people's negative reaction to it, except for whatever sick
pleasure you derive from it.

>And, it works great working DX and pileups--when I
>used to do that! ;)

Don't look now, Kim, but you're a No-code Technician. There is no way
you can "work DX and pileups" on HF unless you were operating as a
third party using your OM's privileges, and that would also require the
use of his call sign. Oh, yeah, six meters. Sure, I DX and pileups are
possible there, but I rather suspect you were talking about HF. Please
give us a run-down on your OM's VHF DX'ing capabilities. That should
be a good one.

>(TX), and similar callsigns. In other words, Kim's callsign, and similar
>callsigns, are not exactly unique.

Dwight:

Obviously, Riley was responding to Kim's specific inquiry regarding her own call sign. It is likely that he would have also found those particular call signs to be of questionable appropriateness in a family-oriented hobbyist radio service.

> Clearly, letters only become vulgar when one attaches a specific meaning
>to them. Without a context to make "TIT," or other such letters, vulgar, I
>can't really envision a "parent or uncle or grandparent" keeping a child out
>of Amateur Radio simply because those letters appear in a callsign.

The "context" is self-evident. It is a well-known vulgarity referring to a woman's breasts in a connotation which is generally considered to be of a sexual nature.

> Finally, I noticed most of the callsigns above belong to males (all except
>one, a club call).

Maybe so, but that doesn't make them any less objectionable.

>The absence of any comment about those callsigns (from
>Riley, you, or others here) makes me wonder if a callsign with the letters
>"TIT" only becomes vulgar when used by a woman.

You have just seen me raise the issue of the objectionable nature of those particular call sign suffixes, regardless of the sex of the holder.

>Would Riley say those
>callsigns bring Ham radio "one step closer to extinction?"

I would not presume to speak for Riley -- why don't you ask him?

>Would Jim omit
>those callsigns from his list (the topic this thread spun off from)? Would
>you as aggressively challenge one of those guys, like you've done with Kim,
>if any one of them were active in this newsgroup?

Yes, I would. Even if those call signs were issued sequentially, there is no reason for the licensee to keep them and use them on the air if they are of an objectionable nature. The FCC would certainly honor their request for a call sign reassignment. Anyone who kept and used such a call would be subject to the same questions regarding their motives as is Kim.

Mike, "firmware" is programming instructions that are quite
permanent, almost never alterable by a user.

An example of "firmware" is a mask-programmed ROM. Not the
erasable type such as in a 2716 EPROM. With the advent of
FLASH memory the extra cost of masking for a mask-programmed
ROM has fallen out of favor over the last decade. Once made, a
mask-programmed ROM cannot be altered.

Another example of "firmware" is the PLD or Programmable Logic
Devices. Those are literally "blown" using on-chip "fuses" (links)
which are vaporized by the programmer. Once done, the PLD can
not be altered, thus it is not "upgradeable."

There are EPROMs available which have NO UV-erase window.
That cuts the cost of the package by a cent or two. Those are
production-erased before programming, then programmed to the
customer's request data by a multiple-unit programmer. Definitely
FIRM ware since a user would have to open the IC package to
erase the ROM and reprogram it.

All microprocessors have "firmware" in them in the form of the
Instruction Set decode-and-execute part of the chip. Those form
the entire instruction set of the microprocessor and cannot be
changed...hence the label of "firm."

A rare form of "firmware" is the hard-wired logic arrangment of ICs,
particularly with "state machines." That can only be "upgraded"
with actual physical wire changes on the board. The 1979 Apple][
Disk Controller card was mostly a state machine designed by
Steve Wozniak himself. In early minicomputers the instruction set
decoder was a combination of state machine and hard-wired logic
chips; that evolved into ROM and then became part of the micro-
processor chip structure.

"Software" is instructions which can be altered by a user. Every program for a PC or MAC is a "software." The instructions or program are stored locally on a disk ("hard" or "floppy") and may be accessed at any time by the PC's disk operating system. Early software was loaded by paper tape, then magnetic tape, then by floppy, then by hard disk, finally by CD-ROM.

A CD-ROM is not labelled either "firm" or "soft" since it contains software which is not easily altered by the user...but parts of each one can be rewritten if the content does not fill the CD. Software on so-called "protected" media can be defeated but that takes a modification of the CD writer program and probably some physical changes in the CD drive itself.

The electronics industry has pretty well defined what is "firmware" and what is "software" over the last three decades. Lately (in the last half-dozen years) the appearance of the useable/programmable microcontroller such as Microchip's "PIC" series has allowed a re-programming of the stored program in the PIC's FLASH memory. This is because Microchip's design (and other microcontrollers) usually allow an extra package pin and internal registers/instruction-set for such reprogramming. That isn't always the case with mass-purchase special microcontrollers which may have the reprogramming feature inaccessible to the user. Examples of that are various low-cost appliances such as lawn sprinkler controllers or automatic coffee makers. On those, the only thing alterable is some settings of operation such as time. Settings sometimes go into FLASH memory but the user cannot necessarily alter the main instruction program set into the microcontroller.

Industry is going away from the absolute labels of "firmware" with the new IC technologies. A microcontroller's program is simply called "a program" if it can be loaded over the existing program or otherwise changed by the user. Program content is still called "software" because that has become normal in the wider group of computer and consumer electronics users. Such software comes on CD-ROM, floppy disks, but sometimes (for hobbyists) as "source code" for a microcontroller's development program which can also load the program into the micro. "Source code" is the human-readable instructions of the program and the development program translates that into microcontroller machine code for programming.

Anything that is "firm" in ware is not readily alterable by the user. Anything that is "soft" in ware is readily alterable by the user.

If a program or data is downloadable over a modem, it does so in software form.

You can call anything you want by whatever name you want but it won't necessarily be understood by a distributor or parts seller. There's several millions of folks involved in the worldwide electronics industry (which includes radio) so, if you want some "firmware" that can be downloaded over a modem, you'd best be VERY specific

in describing it.

You can call a spade a hoe, but be prepared to talk to the NAACP.

Ahem...the "40m 'battle'" has been going on since WARC-79.

That's a mere 24 1/2 years. :-)

Tsk, tsk, tsk...sounds like somebody hasn't been through Basic
Training and learning how to "battle" effectively.

The ARRL can do NO wrong, of course.

Evil is the FCC...of course.

FCC has been around since 1934...almost 70 years.

ARRL doesn't grant amateur licenses although they think they "control" it. FCC grants amateur licenses and is THE authority on U.S. civil radio regulation.

Vote early and often...

Leonard, I can't alter the firmware upgrades. I can only replace the
existing download with the new one.

I'm the user. I can't alter the program at all. I can, however,
replace the program with an updated one.

> Another example of "firmware" is the PLD or Programmable Logic

I'll bet that's what Ten-Tec has done! Those characters have used a PLD
and simply put the serial port on the back of the Orion just for show.
Users download the firmware upgrade, attach a serial cable and only
think they are loading the newest version into the transceiver. Yep,
that's probably what happened.

Users can't alter the Orion's instructions. They can use them or not.
They can load them into the transceiver or not.

The Orion has no hard drive, no floppy disks, no paper or magnetic tape
and no CD-ROM drive.

Nope. I checked. There's no CD-ROM drive on the Orion.

I'm the user. I can't alter the program. I provided you with a link to
an accurate definition and one to Ten-Tec's site, the one with the big
blue letters reading "Firmware Upgrades".

> Industry is going away from the absolute labels of "firmware" with

Industry is going away from labels like "firmware"? Ten-Tec is an
industry. Did you visit the site yet?

> Anything that is "firm" in ware is not readily alterable by the user.
> Anything that is "soft" in ware is readily alterable by the user.

I can't alter the program, Leonard. It must be firmware.

> If a program or data is downloadable over a modem, it does so in
> software form.

You'd better contact Ten-Tec and straighten those guys out!

> You can call anything you want by whatever name you want but

Uhhhhh, I didn't have to describe the firmware upgrades for Ten-Tec,
Len.
They described them for me. They produce them. I get to use them (but
not alter them). They refer to them as firmware upgrades. I'm quite
content with that term. So the Ten-Tec folks are happy. I'm happy.
But, oh yes, you're not happy. Yet you have nothing to do with Ten-Tec
and don't own an Orion.

> You can call a spade a hoe, but be prepared to talk to the NAACP.

I've never asked Ten-Tec about garden tools but both they and I are
quite amenable to discussing the firmware upgrades which they produce.

You are as uninvolved with this one as you are in amateur radio.

> case of Sputnik Fever.

Yep... and guess what, it is 2004 now, and the 'ol US of A is going
thru a serious case of "Sacred Vessel" fever.

We need to give the young people who are willing to learn about RF, a
decent place to learn in the ham ranks, with incentives that match the
requirements.

What changed? The Internet... Cell Phones... The WTC attack...
Chinese astronauts... Outsourced Engineering jobs to India... A
terminated fool-for-a-governer who allowed illegal aliens to sink the
California economy into a $36bln debt... A President who refuses to
guard our country's borders, and who now proposes to let illegal
aliens sink the USA economy (or is it just a Chess Gambit, designed to
pull a plank from the Dem's platform?).

The ARRL proposal is GOOD FOR AMERICA, and is the obvious right thing
to do.

You old naysaying farts talk about work ethic, and bemoan the lowering
of standards... But it is now clear that you simply don't want to
share frequencies (which are now all virtually unused!), nor
information (which is now all 10-15 years out of date!)... you just
want to sit on your asses and bitch.

This old fart likes Morse code up to a point, but it can NO LONGER be
the centerpiece of contention in Amateur Radio - we MUST move on. We
are DONE listening to this MORSE CODE BULLSHIT! STOP IT! Get on with
your lives! Do SOMETHING positive. ANYTHING!

However, given the topic of this discussion (children and the ARS one step closer to extinction), how is one supposed to know the difference between the in your face "TIT" and the "TIT" initials? In the end, without a specific context, it's just a callsign. And how would a callsign bring the ARS one step closer to extinction?

The "vulgarity" and "of a sexual nature" is self-evident to you, Larry. Funk & Wagnals describes "tit" as "teat, breast or nipple." Princeton University's WordWeb defines "tit" as "either of two soft fleshy milk-secreting glandular organs on the chest of a woman" or "the small projection of a mammary gland." And, of course, both mention a "small insectivorous bird." Many farm animals have teats or "tits," but most don't consider them to be "of a sexual nature."

Then you have a lot of aggressive questioning to do. In addition to the examples given before (containing either "TIT" and "ASS"), I found about a dozen more with the same suffixes and several dozen more with other questionable suffixes (GAY, FAG, LEZ, CUM, SEX, and so on). At this stage in the search, I suspect there may eventually be several hundred callsigns you might object to. Given that, and the amount of time you've spent just

questioning Kim alone, you may have decades of aggressive questioning still to do before you finish the entire list. Of course, the more logical approach would to discuss this with the FCC instead. After all, if getting rid of "questionable" callsigns in a "family-oriented hobbyist radio service" is your true goal, that would be the most appropriate, and effective, way to do so.

No, Lennie...but they represent folks interested in becoming
radio AMATEURS.

A TYPO! Lennie MUST be in RAGE ! ! ! He's MAD that folks even
LESS qualified than he percieves himself MAY be allowed to get on HF
soon!

SEEK HELP Lennie! That "rage" thing is burning you up!

> I may have the root cause of it -

Lennie! Don't be shy! Take your bow. You ARE the reason a lot
of people here are disgusted..."hate-filled" and "angry" are
excessive, but then you ARE prone to excesses...

Like calling people who don't agree with YOU Nazis, elitists,
jack-booted thugs, etc etc etc, when no such adjectives were adressed
to you in the first place.

You've since added liar and antagonist to that. Plagarist is
going a bit far, but you border on it.

Yes, Lennie..You're the "root" alright...of crabgrass.

Your message didn't show up on my server, Kim. So I'll use Leo's message (thanks, Leo) to post my response. Anyway, yes, I also seem to remember your callsign wasn't an issue until after you disagreed with Larry and friends. Only at that point did they decide to focus on your callsign to distract from the counter-arguments you made. However, regardless of how it started, that is certainly how your callsign is being used now. It now seems Larry and some of his friends would rather belittle your callsign than seriously respond to your comments on various issues. Of course, some, on the other hand, are simply using your callsign in the same manner as the codswallop of the typical newsgroup troll (including Larry on occasion).

"Don't look now, Larry" but I am a CODED Tech+. Don't even tell me you have missed that for the past umpteenth years! I have been a CODED Tech+ nearly since the beginning of being an amateur. I think it was a couple/few months after getting my ticket that I finally passed the 5 wpm.

And, yes, for the first two or three years I worked a lot of HF, on 10M anyway, and always worked a pileup if I heard one, always worked DX if I happened to hear someone during the weekday on my lunchhour and can't think of a time when I have failed to "get through."

So, don't look now, Larry, you're wrong, as usual. Sneer away....it becomes you.

Thank you. And, as someone else pointed out, if a kid derives the word
"tit" from my callsign, it AIN'T because I taught 'em. *Anyone* who thinks
kids are still that innocent these days, has not been on a schoolyard or
listening in on kids' conversations when they think no one is around--and
I've even heard Kindergartners speaking of some pretty risque topics. Sad
but true.

Vulgar is in the eye of the beholder...and Larry must believes women's
breasts are vulgar.

Agree that the exclusivity of the 40M band should be extended to 7.300
- but that is likely quite a few years away. It will be a few more
years before the 7.100 to 7.200 segment is cleared of broadcast
stations. And, the bandwidth from 7.050 to 7.100 (at least from my
QTH) is relatively underutilized - not a great deal of CW or digital

traffic going on there.

Just thinking that it might provide some clear space for you to
operate if it was opened to phone in the US.

Personally, I don't mind having it as clear as it is right now at all!
There are, as I stated, some excellent DX opportunities there...

Learn *your* history. It was the ARRL which first proposed incentive licensing.

From http://www.qsl.net/ecara/wayback/page13.html:

"In summary, although the vast number of hams were satisfied, a small minority had complaints. And the ARRL listened. In 1963, acting on complaints they claim they received from members and operators in other countries, the ARRL proposed "Incentive Licensing." In an editorial, the ARRL implied that perhaps it was a mistake when the Class B and Generals were given the 75 and 20 meter phone segments. The ARRL's stand was now clear. Exclusive frequencies must be restored to the Advanced and Extra class amateurs in order to give the Generals an "incentive" to upgrade. Of course, what was left unsaid was that in order to do so, frequencies would have to be taken away from the General class hams."

That's the problem though, isn't it? What we need is the statute, not the
rules, which prove nothing in the absence of Novice testing.

So if I understand your view, you'd like to see a statute as proof that
the statute does not exist. Does that sum it up?

All this so the top HAMs have something to gloat about.

I canceled my Leage membership after their first restructuring proposal for amateur radio. Now, after seeing their new proposal, I wish I had NEVER been a member! Seems the Arrl philosophy is that: if ham radio is to survive it MUST sound like CB.

Tee'd Off

> >
> > Dwight Stewart (W5NET)
> >
> > http://www.qsl.net/w5net/

Simple - by making the ARS seem to be something many people won't
want to be a part of - or have their kids be a part of.

Dwight, you previously said you didn't know any parents who would
keep their kids out of ham radio over a callsign like Kim's. Well,
I know plenty of parents who would not support their kids' being
involved in ham radio if their first (or second, or third)
impression involved such callsigns.

> as someone else pointed out, if a kid derives the word

[word deleted]

> from my callsign, it AIN'T because I taught 'em.

That's true. A child who has never seen the word won't learn it
from your callsign.

But if the child already knows the word, you will have taught him/her
something worse. You'll have taught the child that the use of such
words in public, and in ham radio, is OK. That it's acceptable behavior.
And you've made it that much harder for them to learn appropriate
behavior.

Kids are influenced by what they see and hear adults doing, even though
they will deny such influence. Kids who see adults smoking, drinking
irresponsibly, cussing, etc., will be influenced to try the same or
similar behaviors themselves *IF* those behaviors in adults are
portrayed as acceptable, "fun", glamorous, etc.

I recall quite clearly how, as a teenager, I and my peers were subjected
to lectures on the evils of illegal drugs like marijuana, LSD, speed,
'ludes, etc. Those lectures were not very convincing when delivered by
adults who needed two cups of coffee in the morning to get started, a few
beers or manhattans in the evening to slow down, and cigarettes all day to
keep going. Same principle applies in any subject - if Coach emphasizes

fair play and following the rules over winning at any cost, the team is
much more likely to learn that lesson.

>*Anyone* who thinks
> kids are still that innocent these days, has not been on a schoolyard or
> listening in on kids' conversations when they think no one is around--and
> I've even heard Kindergartners speaking of some pretty risque topics.

But that does *not* mean it doesn't matter what adults say and do in their
presence, or in public! The mere fact that you have to listen in when
they don't know you're there means the kids are learning that not all
behavior is appropriate in all contexts.

Same principle as teaching them it's OK to pull their pants down in the
bathroom or doctor's office, but *not* OK to do in public! Even though
everyone knows what's under their clothes, what those body parts are
called, etc.

> Sad but true.
>
The reason it's like that is the failure of adults to act appropriately.

What do any of those things have to do with the tests for a ham radio

> the centerpiece of contention in Amateur Radio - we MUST move on.

We have, Stew. The code test is only one part of the debate.

Do you think giving all Techs a free upgrade to General, and all
Advanceds
a free upgrade to Extra would be good things? I don't.

> We are DONE listening to this MORSE CODE

[expletive deleted]

> STOP IT!

Sounds like you're telling people to shut up, Stew. Is that what civil
debate in a free society means to you?

> Get on with
> your lives! Do SOMETHING positive. ANYTHING!

We are. We're working towards a better license structure and tests for
same.
There's some disagreement about how to do that.

K0HB, Hans, has proposed a radically different license and test
structure here.
Lots of good debate on it. No words from you, though.

Now, as for getting "the young people who are willing to learn about
RF, a
decent place to learn in the ham ranks, with incentives that match the
requirements", think about the following:

The greatest period of growth in the number of US hams in the past 70
years was the 12 year period from 1951 to 1962. The number of US hams
grew from about 100,000 to almost 250,000 in that time, even though
amateur radio was bedeviled
by TVI and other problems. One of the prime reasons for that growth, I
think, was the introduction (in 1951) of the Novice license, with its
simple 20 question written test and 5 wpm code test. But that license
also gave very limited privileges and was only good for one year,
after which the new ham

had to upgrade to a permanent license or leave the ham bands. Many, many of
those new hams were young people.

The young people today are not lazier or dumber than the young people of those
times, so if we're not getting them like we did back then, the problem must lie elsewhere.

Sorry Dee D, I was there, were you? The ARRL was the main reason Incentive Licensing happened. They are the ones that started it all. The 'good ole boys' in Newington are the ones responsible.

True, by the time the FCC got into it, it came up with a bunch of crap that the ARRL did try and fight. But by that time it was too late.

Yes indeed...the ARRL is the reason we have incentive licensing. And now they want to open it up so much that a untrained monkey could be on HF in a week.

I am a life member of the ARRL. And have been a member since 1962. With only 1 year lapse because of military service. I was there Dee D.

IIRC kim chose the call sign on a dare because of the "TIT". Now why would anyone challenge someone to chose that callsign unless they saw the "TIT" had some kind of in your face or sexual reference? That is exactly why she chose the call sign, because of the tit reference. Extremely bad taste.

> And how would a callsign bring the
> ARS one step closer to extinction?

Picture a senerio where some ham brings his young grandson or granddaughter to a ham meeting or a field day to introduce them to amateur radio. They walk in and there stands some broad with an XL size tee shirt on that is still two sizes too small, with a call sign like that across her chest. Not a very good statement for ham radio.

Unused frequencies? Where are they? 15 and 10 during a sunspot minimum in the middle of a day?

You sound like K1MAN claiming to have tuned 20 meters and found only two active frequencies. Balderdash.

Try hooking up an antenna next time.

You probably realized that Dee D. may be assuming the role of "devil's
advocate" here (by overplaying an idea to generate further discussion).
In other words, we might not want to take her words at face value until
she clarifies what she really means.

So, Dee D., what did you really mean to say above?

But kim has already stated she dosen't care what anyone else thinks,
which is the general attitude of people with little or no taste.

You are mistaken, Leo.

That statement of mine was in response to claims that I was "prejudiced"
about Kim's callsign.

The word "prejudice" means to "pre-judge". IOW, to come to a conclusion
before knowing all the relevant facts. My statement

"It wasn't formed beforehand. It was formed only after I encountered
the callsign and its owner here, and considered all the issues."

simply proves that I wasn't prejudiced because I didn't pre-judge. And I
did not encounter that callsign, or ones like it, before I saw it here
on rrap, in use by its holder.

IOW, I did not hear about it somewhere else, see it used by someone other
than Kim, etc. And I did not rush to judgement.

In fact, when I first saw it, I thought "Kim" and the callsign were pseudonyms being used to hide the identity of the poster. Like your use of only your first name, rather than your callsign. Imagine my surprise when I discovered it was for-real!

Look at the context in which I wrote that statement, and it is clear that it simply means I formed my opinion of Kim's callsign based on experiences here, not on prejudice.

It trashed ham radio by creating a CLASS system in our ranks, forcing
seperation by license class, making one feel superior and others thus
inferior. This was NOT THERE before Incentive Licensing.

The FCC did not propose Incentive Licensing. It was the ARRL back about
1963 or so. The FCC followed up on it and 'modified' it and it was
implemented beginning November of 1968.

Why do I know this? Because I read QST cover to cover while stateside in
the military. And when I went overseas I lost track due to military
activities. I returned to the USA in 1968. I operated on 7.010 and received
a notice of violation from the Cleveland Ohio FCC monitor. I was out of
band for my class of license.

And I might add, if I were trying to introduce my grandson or granddaughter to amateur radio, do you think I would walk up to kim and say, "I would like you to meet kim, her callsign is W5TIT." Hardly, she would be the one person I would steer them away from as I would certainly like to present better examples of what amateur radio is about.

You are saying that your opinion was formed based on experiences here,
and not simply on the callsign, aren't you? Your statement that you
did not pre-judge certainly enforces this, does it not?

I keep hearing that the callsign is inappropriate, but what you really
mean that it is a combination of factors - right?

The rule cited shows that there is not a requirement to charge a fee for any license examination of any class.

If you think otherwise, then I guess the burden of proof lies with you, not with me. I've made my case by citing the governing regulation.

Good luck on this one now!

"Alun" <alun@1stcounsel.com> wrote

> I don't think that qualifies as proof.

Here is a direct quote from the "Amateur Radio Newsline" broadcast of Sept 12th, 1993, where the hissy-fit of W5YI is described. Since K7UGA left the Senate in 1986, long before this incident, it's unlikely that he responded with legislation which required free Novice exams.

Sunuvagun!

de Hans, K0HB

" VEC UPSET ABOUT FREE NOVICE TESTS

The ARRL says that it will not charge applicants for Novice tests. This even though the W5YI VEC has filed a complaint with the FCC alleging that the League's VEC operation is in violation of the rules because it refuses to charge applicants for these tests.
But Fred Maia W5YI who operates the VEC bearing his callsign claims that its a matter of uniformity. That all VEC's who use what is called the annual method of figuring reimbursement are required to charge an examination fee for every test it gives, including Novice exams. The ARRL says that it plans to continue its policy of administering Novice tests free of charge because it believes that this policy is consistent with an FCC tradition established back in the 1950's. This, as a way of making it easy for youngsters to get entry level licenses.
The League's President, George Wilson, W4OYI says that the whole thing is nothing more than one of the ironies that keeps ham radio politics interesting. Wilson notes that VEC's have always had the latitude to set their own fees. He adds -- and we quote -- "Frankly, we see no compelling Federal interest in whether or not a class of nine year olds ought to be charged for taking an entry level ham radio exam."
But Maia and his W5YI VEC operation see it very differently. In his September 1st issue of his W5YI Report newsletter Maia says that the potential financial benefit to the League resulting from its policy is to serious to be ignored. He says that free examinations when all other VEC's charge, attract applicants who are the potential purchasers of examination preparation materials. Maia believes that the purchasing decisions of these people may be unduly influenced by their choice of VEC's.

> General class hams."

Unfortunately, that's not quite how it happened.

FCC thought that hams would go for the Extra after 1953 simply
"because it
was there". And some did - but not many.

As early as 1958, FCC asked why there were so few Extras. They were
concerned about certain trends in amateur radio they didn't care
for, such as increasing use of manufactured equipment whose inner
workings the ham-owner had only a vague concept of.

FCC asked ARRL for proposals in 1958, and again in 1963. ARRL put together a
very simple proposal in 1963, *in response to* FCC's request. It consisted
of just two items:

1) Reopen the Advanced class license to new applicants (it had been closed
at the end of 1952)

2) Require an Advanced or Extra class license to use 'phone on the 80, 40,
20 and 15 meter ham bands. (back then 30, 17 and 12 meters were not
ham bands).

That was the whole proposal. No additional code testing would be needed to
retain full privileges. No subbands-by-license-class except those already
in place for Novices. No new limitations on CW. Existing Advanceds
wouldn't have to do a thing. Existing Generals and Conditionals would have to take
one additional written test to get their 80 thru 15 'phone privileges back.

This proposal was nothing new - it was essentially a return to the old
"ABC" system that had existed from the mid '30s to February 1953, and which FCC
had revised in 1951 by adding Novice, Tech and Extra and renaming the
ABC classes of license.

The 1963 ARRL proposal got an RM number and the commentary began...

FCC looked at that simple proposal, and then asked for more. They got quite
a bit of response from the amateur committee, and at least 10 of the
proposals were assigned RM numbers. There were at least 11 proposals with
RM numbers by 1965.

Commentary to ARRL was mixed, to say the least, but a slight majority were
in favor of "incentive licensing" changes. ARRL and FCC took that as a
mandate...

Out of all these proposals FCC put together ideas and came up with a proposed
scheme that bore little resemblance to the 1963 ARRL proposal. It was far more
draconian, restrictive and encompassing than anything ARRL proposed,
and was strongly opposed. Finally a compromise was announced in 1967.

Over 6000 comments were received by FCC on the matter, even though the
number

of hams back then was less than a quarter million and there were no online
comment systems. The whole process took years (1963-1967).

Most hams then and today are not aware that FCC asked first. But they did.

And I'll ask the question again:

How did incentive licensing "trash ham radio"?

Given that ARRL likely will lobby for continuing a code test for
Amateur
Extra (12-13WPM?) applicants, I predict that Morse testing will not be
eliminated in this decade.

While it's a cop out, it's probably the only way they can get 15
politicians
to sign up for a "New Amateur Radio Plan" without a palace revolt on
their
hands at the BoD meeting. They'll be able to go back to East
Overshoe, Iowa
and Resume Speed, Arizona and mumble platitudes to their membership
about
how "We've opened HF to non-Morse applicants, but where it really
counts we
actually increased the Morse requirement."

That's my story and I'm sticking to it.

>You probably realized that Dee D. may be assuming the role of "devil's
>advocate" here (by overplaying an idea to generate further discussion).
>In other words, we might not want to take her words at face value until
>she clarifies what she really means.
>
>So, Dee D., what did you really mean to say above?

Paul, I appreciate your "guidance" in newsgroupism, but let's clear
the board and outline a few things -

1. Double-D has claimed that I am on her "killfile." That means
"she doesn't read any of my postings" for whatever righteous
reasons she has (such as puritanism and syncophancy of
some unclear "amateur ideals").

2. Killfiling may be good for removing those mouthing vulgarities
and obscenities ("deleting explitives" like 'heck' and 'darn') but
it is also an ostrich syndrome, burying one's head in the virtual
sand of righteous thoughts of the "ideal" so that "impure"
thoughts (differences from righteous personal opinions) are
filtered out.

3. Those who claim "killfiling" are irresistable open targets for
commentary, taking pot-shots against the syncophants, the
sanctimonious self-righteous self-propelled "experts" and
olde-tymers's ideas. In Double-D's case she has exhibited
Parentalism, that of treating others not thinking as she does
as "little children needing to be taught the Right way..."

4. Hunting Season is ALWAYS open on the Internet. If you wish
to "guide appropriate behavior," there are several in HERE who
are likely recipients of "guidance and counseling." QED.

5. For proper sanctimonity (sanctimoniousism?) of the self-righteous
olde-tymers, you and the newsgroup ruling triad (are you still one
of those?) should CLOSE the public access here, install a
monitor, demand a showing of "papers" for access. That is the
proper way to Control Thought. An ultimate in Ostrich Syndrome.

6. Obvious Pro-Code Test Advocates do NOT play "Devil's Advocate."
Those are hide-bound olde-tyme-thinking PCTAs who are not
only sanctimonious self-righteous self-important self-propelled
"experts" but are all seriously devoid of a sense of humor. They
are so stuck on the "proper" way to act that their rigidity

collapses in the slightest breeze of independent thought...and they quickly lapse into anger (sometimes hatred) against the independent person, oft-times jumping into puerile barbaric behavior of using personal insults rather than arguing subjects. Quod Erat Demonstrandum by all that is Google and DejaNews.

7. Independence of Thought is a cherished item in the United States of America since its beginning a scant 228 years ago. So much so that it is incorporated into the First Amendment of our Constitution to make it clear what we citizens can say to our government. By tradition and independent spirit, we Americans also cherish being able to pot-shoot politician's opinions and their political parties. ARRL is a political entity as well as a publishing house and is NOT any sort of agency of the federal government; they are more open for pot-shooting than any feds despite the santimony expressed by their devout followers of the Church of St. Hiram.

8. "The Devil made me do it." :-)

In article <100v15m37nr7cf4@corp.supernews.com>, "Dan Mattingly N0FQN" <n0fqn@charter.net> writes:

>The issue is it was not invented today. So, what's your point??? You could >say this statement about any subject. It's too, broad in texture. Narrow >your point or I won't give you a grade.

Oh, wow, another LITERALIST joins the group grope!

You really don't understand the context of the original subject question or that alternate realities are INFINITE and that any and all such alternatives are as valid, true, etc., as any other?

To sum it up, Mistah Supreme Grade Literalist, it can be said that, in an ALTERNATE REALITY, the rest of the radio world would have gone on, advanced, improved, innovated, invented, grown by leaps and bounds WITHOUT amateur radio...just as it did in this present reality when amateur radio does exist.

You want to "give me a grade" that is an "F" because you don't like to hear about the Rest Of The Radio World?

Go ahead. The rest of the radio world doesn't really care because it long ago TOOK OVER all of the innovation, invention, development, pioneering, etc., etc., etc. You don't want to believe that? Look around you past the League propaganda with its history of sinning by omission in the "history of (amateur) radio," implying that amateurs "pioneered" everything (they didn't).

ARRL wasn't even the first national radio club in the USA. That "distinction" belongs to the Radio Club of America...still in existance (as it was five years before the League was formed) but no longer favoring amateur activities over other things in all of radio.

Back in the beginning of "radio," generally accredited by historians to be 1896 (108 years ago), there were neither amateurs OR professionals. Hardly anyone knew anything and it couldn't have been a big business. Heck and darn (expletives are not allowed in here lest the Puritans become offended and outraged), early radio was hardly advanced in "radio" technology by 1920, two years after WW1 ended...and Ed Armstrong received his superheterodyne receiver patent (applied for 2 years earlier)...and ol' Hiram lobbied for the return of amateur radio activity (thereby achieving immortality and sainthood via the League).

The original question was conjecture on What Would Happen IFF (thats "If and only If" in literary conjecture spelling) Amateur Radio

were "invented" TODAY instead of being shut down past 1919.

Try some concentration on CONJECTURE, not some "lecturing"
based on what happened in the present reality...with all the
ass-umptions of your "instructorship" and "ability to give grades."

I say the REST OF THE RADIO WORLD (a heckuva lot bigger
than amateur radio can ever be) would have gone on ANYWAY
because hardly any of that growth, innovation, invention, etc., is
NOT based on amateur activity. I've been IN that rest of the radio
world for half a century and have very little evidence that any of it's
growth was ever due to amateurism.

Prove me "wrong" about an ALTERNATE REALITY with your
"instructorship" and "teaching credentials" and "ability to 'give'
grades."

Pffft. Consider yourself fired from the class, the key to the teacher's
lounge taken away, your parking space eliminated. No pension.
Take it up with the Bored of Education in the Alternate Reality.

In article <ixNPb.18836$i4.7572@newsread1.news.atl.earthlink.net>, "Dwight Stewart" <stewartx@NOearthlinkSPAM.net> writes:

> The "vulgarity" and "of a sexual nature" is self-evident to you, Larry.
>Funk & Wagnals describes "tit" as "teat, breast or nipple." Princeton
>University's WordWeb defines "tit" as "either of two soft fleshy
>milk-secreting glandular organs on the chest of a woman" or "the small
>projection of a mammary gland." And, of course, both mention a "small
>insectivorous bird." Many farm animals have teats or "tits," but most don't
>consider them to be "of a sexual nature."

Dwight, a number of years ago (in 1956 to be exact), Playboy magazine published a hilarious spoof of the "outrage" of the public to "vulgarity implied" in print. To prove the point, they wiggled their asterisks in some familiar poems somewhat like -

"Little Miss M****** sat on a t*****, eating her c**** and w***, along c*** a spider who s** down b****** h**...."

No doubt lots of folks were tittering at the IMPLIED VULGARITY of all that. :-)

It's just a tiny step from the above generality (via transferrence) to the supreme outrage and anger of supposed vulgarity and terrible sexual inuendo when the sanctimonious self-righteous are challenged on their noble, good, and godly opinions in here.

Supremely noble ("effective, ubiquitous, etc.") morse code is the PUREST form of communications, right in line with the PURITAN thoughts of the Latter-Day Victorians who wish for the 1930s all over again.

Technically, the Purists of amateur radio consist of some of the best dielectric material possible, insulating themselves from all that is impure, filthy, nasty, vulgar, etc., etc., etc of modern times. It might even be called "dielectric materialism" (although the pun in that will be lost for humor is one of the vulgarities of the Puritans).

With all that pure dielectric around, it is a wonder that the Puritans can conduct themselves properly...enough to get a circulating electric current. :-)

Unfortunately, I overestimated the amount of balls carried by the BoD.
Not only didin't they have the balls to recommend complete elimination
of the Morse exam, but in recommending that Morse testing be continued
for "EXTRA", the speed they recommended was the same count-the-dots 5WPM
which Novices have been passing for over a half-century.

Pathetic!

IIRC, most VEs give the code test using farnsworth method. That is, 13
wpm characters
spaced at 5 wpm rate. Harder to count the dahs dots. Idea is that one
can get faster
at code quicker, as you learn the sounds of letters instead of counting
the dots.

Way back when, I had to receive and *send* with an FCC provided straight
key 5wpm.
I think that the FCC found that nobody ever failed sending if they could
receive, so they
dropped the send test.

> Of course I do, but do you think they will really move?

Yes. They agreed to it in the treaty.

> Some may, but I think some of them never will.

Why?

Many countries are reducing or even eliminating their SWBC operations.
The others have agreed to move, and they have about 3 years to do so.

In the 60s and 70s, SWBC was so crowded that some countries moved
below
7100. Complaints from ARRL and others to the various State Departments
got them to move. The only real failure of the "Intruder Watch" of
those days
was the woodpecker, which was an OTHR system. It was made to move by
other means ;-)
>
> > I don't recall the timing but it is

Three years or so IIRC. Maybe before FCC drops Element 1.

> > Perhaps someday, the ITU will open up the 7.2

If the USA opens 7075-7100 to 'phone, all that will happen is the DX
'phones
will move still lower in the band to get away. There are already some
on 7050
and lower - and many of them are in R2!

The nonexistence of something cannot be proven. There used to be a
rule in Part 97 that Novice tests were free.

Present Element 2 is for the VHF/UHF-centric Tech. The more balanced
"NewNovice"
simply needs a different test.

> The privileges would be more
> than the old Novice as well.
>
Yep - and much less in some ways than the Tech.

Each license level needs a test tailored to its privileges and intent.

> >> >> > Current Element 2 is very VHF/UHF centric, and so are current

It would be reasonable for exiting Techs to keep their existing
license name
and VHF/UHF privileges, *and* get "NewNovice" privileges on HF.

Whose? Not FCC's!
>
> Besides, Element 4A had most of the harder questions anyway.

Not really. I passed old Element 4A back in 1968, at the age of 14,
between 8th and 9th grades. I wasn't even intending to try it - I was
at the FCC for the 13 wpm code, and the examiner said "why not try
Advanced while you're here?". So I did.

How hard could it have really been if I passed it first-time under
those circumstances?

That depends entirely on the type of encoding and modulation used,
doesn't it?
Can you categorically say that digital voice can *never* outperform
SSB?

Seems to me like you're getting mad at the wrong people.

Ham radio, like Life itself (I've said this before, and I'll
probably end up saying it again), is a mirror. You get back EXACTLY what
you put into it.

What you hear on the air is a reflection of the PERSONALITY of
each INDIVIDUAL operator. It has NOTHING to do with how hard they
studied for their license, or how much they know, or how many letters
they have after their name.

If ham radio is declining in the "quality" of what's heard on the
air, it's because of poor operators making life miserable for the
newbies, apparently all because of some misguided sense of loyalty. To
what or to whom this loyalty is directed, I have never understood.

Let me ask you something: Have you ever made comments on the air
that were derogatory to someone who was new to the hobby? Have you ever
adopted an air of superiority in the presence of a newbie?

If so, then YOU are part of the problem. If you do not feel you
can be civil to a new operator (remember, there was a day when NONE of
us had ever seen a microphone or transmitter, let alone operated one),
then simply ignore them and move on to something else.

The "Death of Ham Radio" has been predicted by many others for
many years. Yet, the Amateur Radio SERVICE endures to this day.
Different from what it was ten or twenty years ago, yes, but it endures.
This tells me that new licensees aren't the problem, and it tells me
that the ARRL isn't the problem.

What I see as the REAL problem are those "veterans" in the HOBBY
who have become so obsessed with their own ideas of whom is superior to
whom that they will deliberately make life on the air miserable for
anyone who doesn't measure up to their own standards. I think such

people would be doing much better to offer polite-but-firm correction to operating errors, and be willing to SHARE their knowlege as opposed to zealously guarding it like some grumpy dragon guarding their hoard.

You may not like the ARRL for whatever reason. Fine. That's your choice (I'm proud to be a 'Lifer' myself). But would you find it so very hard to remember and respect "The Amateur's Code" that they publish? It dates all the way back to the League's founding, and the days of Hiram Percy Maxim (without whom we wouldn't even HAVE Amateur Radio).

Chill out. The only things that will truly kill amateur radio are forgetting its origins, WHY we have it today, and more anger and hatred at newbies just because they have an easier time getting licensed than some of us did.

Right on!!!!

Like the Radio school at Ft Gordon Ga? Where students were already learning CW and Radio theory in classes, and at K4WAR the guys got together and studied for their license with instructors from the school. Like you were going to fail with all that help? Vs the determined blind guy who learned it on his own? Like is not Fair, it is what you make of it!

You should have waited until after the FCC decides what to do with the ARRL's "suggestion". Yes, I am a Tech and was furious when I seen that they were wanting to grandfather the Techs to General with no written test. Just because the ARRL suggested it, does not mean that it is set in stone yet. FCC may have other ideas. Don't forget that the ARRL does not consist of so many X number of board members at meetings. You and the rest of us as members have a say in these matters also. More than likely they got input from alot of other people and tallied it all up. Yet, I still would like to know where the idea came from about grandfathering techs with no test.

> No, the problem is that we can't operate phone on all the frequencies that
> the DX can. This is true on 80, 40, 20 and 15 (30 too, but let's not go
> there).

Hi Alun .... Got a point there ....I have heard on fone (sic)that some foreign ops are very happy with this arrangement. I am in agreement that the 40 situation needed attention. Hopefully this will make things better for everyone. As for 30 ...well not bad generally but the Espanol pirates, fishing boats and big signal data do stink up the neighborhood. I know I know we are secondary users ....

> As you don't work phone DX I wouldn't really expect you to be aware of
> this, much less care,

No no Alun I do care ...I see the problems that are there are making the service less enjoyable for all hams. I wish that I had the constitution to put up with the stuff I hear up band but I do not. This service-hobby is at the forefront of the idea of manners and procedures maximizing the enjoyment for all.

but there it is. I have no more desire than you do to
> see any 'gallbladder nets' further down the bands.

We collectively Alun have let these problems fester and boil over to the extent that enjoyment of this service is compromised by what we hear on the bands today. I would venture to say that a $25 to $50 a year fee for a ticket would separate the proverbial wheat and chaff. That would give the feds the resources to properly police the roost but given the present resolve of the FCC ...oh well ... and the fact that a lot of hams still have their communion money ..... The idea that we are self policing is just so much vaporware mantra.

God Bless and good DX there Alun ..73 Tom KI3R

Amazing Jim ....I know there are people out there who do not believe you regarding the notice. Your situation taken in context of what we hear today on the bands is crazy by today's "standards" but it does show where we have gone in this service .....unfortunately.

God Bless there Jim 73 Tom KI3R Belle Vernon Pa

1474. FCC Vanity Call Sign Dispute

Newsgroup: rec.radio.amateur.policy
Date: 2004-01-22 23:41:24 UTC
From: Keith <kilo_watt_radio2@yahoo.com>
Message-ID: <1010nt4avos5bf2@news.supernews.com>
Source record: 86150

Before the Federal Communications Commission Washington, D.C. 20554

In the Matter of Amateur Radio Station License of Richard L. Smith to Modify the Call Sign of Amateur Station KC4USH File No. 0000993298

ORDER OF MODIFICATION Adopted: January 16, 2004 Released: January 22, 2004

By the Chief, Public Safety and Critical Infrastructure Division, Wireless Telecommunications Bureau:

1. Introduction. In this Order of Modification, we modify the license for Amateur Radio Station KC4USH, Chesapeake, Virginia. Specifically, we modify the Amateur Radio Service station license issued to Richard L. Smith (Smith) to show the call sign KG4UKV, which was the call sign assigned to his amateur station prior to the grant of the captioned application. As explained in further detail below, we take this action pursuant to an earlier order proposing to modify Smith s license.1

2. Background. In the Modification Proposal, we concluded that the grant of the vanity call sign KC4USH to Smith s amateur station was defective because the call sign is included in the call sign block KC4USA through KC4USZ which is available to the Department of the Navy for the use of amateur stations at U. S. Navy Antarctic stations.2 We were unable to set aside the grant of Smith s abovecaptioned application because we did not become aware of the error until more than thirty days after the grant occurred. As a result of our error, we proposed to modify Smith s license pursuant to Section 316(a) of the Communications Act of 1934, as amended,3 by exchanging KC4USH with the call sign previously assigned to Smith s amateur radio station, KG4UKV.4 In this connection, we tentatively concluded that the proposed modification would serve the public interest by ensuring that the call sign block KC4USA-KC4USZ is only used to identify amateur stations that are located at U. S. Navy Antarctic stations as provided in the Commission s Rules.

3. Discussion. A copy of the Modification Proposal was sent to Mr. Smith with the requirement that any protest thereto be submitted within thirty days of its the release date.5 On July 30, 2003, Mr. Smith submitted a letter protesting the proposed modification.6 In support of his protest, Mr. Smith states that the call sign KC4USH was the only call sign he wanted as a vanity call sign because it was the call sign used at Cape Hallett Station, Antarctica, when his father was located there during Operation Deep Freeze 60,7 that he applied for the call sign in good faith, and that he has spent considerable personal funds to make others aware that he was assigned this call sign.8 Mr. Smith also notes that the call sign KC4USH has not been issued since 1974 and that, with the exception of the call sign KC4USV, the U.S. Navy is not using any call

signs in the call sign block made available to it.9

4. We have considered the statement and evidence that Mr. Smith has submitted. As an initial matter, we note that the reason a licensee requests a particular vanity call sign is not a sufficient basis to allow a licensee to retain a call sign that is otherwise unassignable to the licensee s station pursuant to the Commission s Rules. In this case, all call signs from the call sign block KC4USA through KC4USZ have been made available to the Department of the Navy for the use of amateur stations at U.S. Navy Antarctic locations.10 For this reason the rules applicable to our call sign systems, including the vanity call sign system, have consistently stated that call signs from the call sign block KC4USA-KC4USZ are not available for assignment to amateur stations licensed by the FCC.11 We conclude, therefore, that we must modify Mr. Smith s license to show a call sign that is available to the FCC-licensed amateur station.

5. With regard to Mr. Smith s contention that the U.S. Navy is only using one call sign in the call sign block made available to it, we note that such claim, even if it is correct, does not provide a sufficient basis for Mr. Smith to retain the call sign KC4USH in contravention of the FCC s rules and policies. In this regard, we note that other call sign blocks have been made available to other agencies12 and that with the exception of the call sign block KG4AA-KG4ZZ, very few of these call signs have been assigned. Nonetheless, once the FCC makes a call sign block available to another licensing agency, those call signs may no longer be assigned to amateur stations by the Commission. Call sign assignment policies applicable to those call signs, including when and whether to assign them, become the responsibility of the other agency. We also note that we are unaware of any reason that the U.S. Navy could not resume assigning these call signs to stations operating from Antarctica. Further, given the FCC s prior decision to make such call signs available to the U.S. Navy, the record in this proceeding does not present a sufficient basis for revisiting this issue or suggesting modification of the U.S. Navy s flexibility in this regard.

6. As we noted in the Modification Proposal, the assignment of the call sign KC4USH was an error. We apologize for any inconvenience this error has caused Mr. Smith. We have reviewed our call sign assignment systems and policies and made corrections necessary to ensure that these systems do not assign call signs that are unavailable to FCC-licensed amateur stations in the future. Based on the record in this matter, however, we conclude that it would be in the public interest to modify Mr. Smith s amateur station license for KC4USH, Chesapeake, Virginia, by exchanging the call sign KC4USH with the call sign KG4UKV.13

7. ACCORDINGLY, IT IS ORDERED, pursuant to Sections 4(i) and 316(a) of the Communications Act of 1934, as amended, 47 U.S.C. Â§Â§ 154(i), 316(a), and Section 1.87 of the Commission s Rules, 47 C.F.R. Â§ 1.87, that the station license for Amateur Radio Station KC4USH IS MODIFIED to show the call sign KG4UKV.

8. IT IS FURTHER ORDERED that this Order of Modification shall be sent by certified mail, return receipt requested to Richard L. Smith, 509 Homestead Road, Chesapeake, Virginia 23321.

9. This action is taken under delegated authority pursuant to Sections 0.131 and 0.331 of the Commission s Rules, 47 C.F.R. Â§Â§ 0.131, 0.331.

Both you and Dwight must lead sheltered lives. More people use the word
"tit" in the derogatory, vulgar manner than use it in the neutral, clinical
sense except of course for farmers, who as a group do use it in the neutral
form. For women, farmers prefer to use breast or bust.

Leo, my point is that it would not stay clear very long. It would fill up in a heart beat with domestic nets and QSOs thereby causing hardship and hard feelings among the those outside the US.

Basically I think the ARRL Board knows that the free upgrades means that
their proposal probably will not be adopted in this form. The FCC has never
gone along with free upgrades before and there is no evidence that they
would do so now. However, I believe they tossed it in as another idea for
the FCC to consider in developing whatever the FCC decides to do, if they
decide to do anything at all.

There were "class distinctions" before IL, Dan. I heard folks say, way back
then,
that Novices and Techs weren't "real hams".

People who look down on others because of license class usually look down for
other reasons too. There were the Collins owners who looked down on the Drake
folks, etc. The SSB-vs-AM stuff. The appliance ops vs, the homebrewers. DX vs.
traffic handlers, contesters vs. ragchewers, etc. That sort of thing comes from
the
person, not the system.
>
>The FCC did not propose Incentive Licensing. It was the ARRL back about

I was a ham back then, too, Dan, and I read the same mags.

We're not going to agree on who started it, but I think we can agree on these things:

1) Whoever started it, the ARRL BoD pushed IL from 1963 onwards
2) What the FCC finally enacted in 1967 was very different from what ARRL proposed in 1963
3) ARRL claimed that a majority of hams at the time supported IL. Others claim a majority opposed it. Nobody *really* knows, just as nobody knows what would have happened otherwise.
4) There's still a lot of bad feeling about the whole thing.
5) The present ARRL BoD and Hq folks are a completely different lot than was there in the '60s

>I operated on 7.010 and received
>a notice of violation from the Cleveland Ohio FCC monitor. I was out of
>band for my class of license.

And if the original 1963 ARRL proposal had been enacted, you would not have been in violation.

Nope.

I'm saying that I didn't have an opinion until I encountered the callsign here.

>Your statement that you
>did not pre-judge certainly enforces this, does it not?

Nope. All my statement says is that I did not have an opinion until I saw the
callsign. And at first I thought it wasn't a real, FCC issued callsign, but
simply a way of staying anonymous. Like you do, "Leo".

I figured that the person using it here chose it as a screen name
because FCC wouldn't issue such a call. I was mistaken - FCC
would issue it, but only as a vanity. Which surprised the

[expletive deleted]

out of me!
>
>I keep hearing that the callsign is inappropriate, but what you really
>mean that it is a combination of factors - right?

Wrong. The callsign, and others like it, are simply inappropriate for the
ARS. Just my opinion. That FCC allows them and that hams choose
them doesn't make them any more appropriate for the ARS.

>
That's probably correct, Dee. And that's what bothers me!

As you say, FCC has never done free upgrades, and the last time the issue came up (98-143), the ARRL proposal was for existing Novices (!) and Tech Pluses to get free upgrade to General. Of course, FCC said "no way", and has had no problem whatever keeping the closed-to-new-issues classes in their database.

So why propose something FCC obviously isn't going to do? Just wastes everybody's time.

More important, it diverts attention from the other issues.

oh wait, I think I just answered my own question...;-)

There were "class distinctions" before IL, Dan. I heard folks say, way back
then,
that Novices and Techs weren't "real hams".

People who look down on others because of license class usually look down for
other reasons too. There were the Collins owners who looked down on the Drake
folks, etc. The SSB-vs-AM stuff. The appliance ops vs, the homebrewers. DX vs.
traffic handlers, contesters vs. ragchewers, etc. That sort of thing comes from
the
person, not the system.
>

I was a ham back then, too, Dan, and I read the same mags.

We're not going to agree on who started it, but I think we can agree on these things:

1) Whoever started it, the ARRL BoD pushed IL from 1963 onwards
2) What the FCC finally enacted in 1967 was very different from what ARRL proposed in 1963
3) ARRL claimed that a majority of hams at the time supported IL. Others claim a majority opposed it. Nobody *really* knows, just as nobody knows what would have happened otherwise.
4) There's still a lot of bad feeling about the whole thing.
5) The present ARRL BoD and Hq folks are a completely different lot than was there in the '60s

>I operated on 7.010 and received
>a notice of violation from the Cleveland Ohio FCC monitor. I was out of
>band for my class of license.

Exactly. In fact, it wasn't even automatic - the Tech Plus had to show up at a
VE
session, pay the fee (even if no tests were taken) and provide documentation.

>But just wait till ARRL BoD meets next month..... I expect to see
>them recommend a three-tier license regime, with a new low-powered 50W

> Is it *really* that hard? Heck, the old Extra was earned by an 8 year old
> in 3rd grade. Obviously a bright kid, but c'mon - how hard can the test
> really be?

Has nothing to do with it. The point of the propsal is to simplify the
license structure, the testing process and the record keeping. There
are little to no differences in the levels of difficulty between the
Extra and Advanced writtens and they both cover the same general
material in the same depth. Both have passed at least 5 wpm code
tests. All of which has clearly rendered the Advanced redundant today
so it should be done away with if we expect any significant
streamlining of the regs. If it takes a one-shot giveaway to clean up
the mess fine, do it.

> >It's obvious, at least to me, that one major bottom line intent of the
> >proposal is to foster more activity on the HF phone bands.
>

> Why? Do they need it?

Who is "they"?

> Why not foster activity on *all* bands and modes?

The new entry-level ticket should do a good job of just that. Give 'em
a taste of HF phone beyond just 10M and the activity level ought to go
up. Particularly since we're on the downside of the spots count curve.
The other bands and modes will take care of themselves. The
restrictions on the entry-level ticket provide realistic incentives to
upgrade. I like it.

> Besides, the problem ain't the license. Plenty of folks with the license but
> no station set up. I mean, look how complicated and difficult it can be
> for some folks to put up an end-fed wire...

Yeah, the tests can't filter out the Brainiacs but that's not a
regulatory issue.

> >If the
> >proposal is adopted I expect that objective might be met so I support
> >the basics of the proposal.
>
> What parts don't you support?

I'm not convinced that leaving 20M completely out of the picture is a
good idea. They shoved the "Novices" pretty far up the phone bands
which will severly limit their opportunities to get into contests
and/or chase DX. And I'm a bit cool to the concept of expanding the
phone bands down into the old Novice bands.

> >James I fail miserably to understand why you're so adamantly opposed
> >to the free passes.
>
> Because there's no reason for 'em. Is giving all Advanceds a few more kHz on
> 80/40/20/15 going to get many more of them on the air? I don't think so.

Again that's not the point. The overriding point is getting rid of the
Advanced class license, has nothing to do with activity levels. The
only "losers" would be the entrenched Extras who would suddenly have
to share their exclusive spaces with the dayum low-born new "givaway"
Extras. Pore babies. .

> The problem is that the freebies say that there's nothing essential about the
> General and Extra writtens.

That's just plain BS. Let 'em eat cake.

> And it's unfair to those who come after
> GiveAwayDay.

Yeah, yeah, and we had to walk uphill both ways in a blizzard to take
our 20wpm code tests. And now they're giving 'em away for a lousy 5

wpm. "That ain't fair!" Pfft.

Those who miss "giveaway day" will be faced with some specific much
more rational regime or another just like those who came before them
have faced all sorts of different regimes over the years. And they'll
deal with it as usual. So pfft on them too.

> >Nope. Not if ya expect HF newbies to even try CW. If newbies don't try
> >it we might as well drive a stake in the mode now and get the pain over
> >with.
>
> You misunderstand. 20 per would be for Extra only, not for all classes.

20 wpm worked when the steps to get there were 5, 13 then 20w wpm.
Going from zip directly to 20 would be another whole story and I
expect the results would be dismal. Not to mention the waivers
problem. I would really go for changing the 5 wpm code test to at
least one minute solid copy or take it again.

I researched the question. It seems that Frank Butler the SE Director has
run un-opposed for the last several elections. Which explains why I don't
remember having voted for a Director recently.

Also since I have NOT seen the results of his voting I don't know how he
stands.

Lennie:

I sure as heck can't handle Kim's, that's for darn sure! BTW, I don't consider there to be anything vulgar about a woman's breasts, except when a woman like Kim uses a vulgarity commonly used to refer to a woman's breasts as a Vanity Call Sign, for the exclusive purpose of calling attention to herself and inciting controversy.

Kim:

To the contrary, I believe that a woman's breasts are a thing of exceptional beauty (usually -- yours may be an exception, of course) and there is absolutely nothing vulgar about them unless they are displayed or referred to in a vulgar manner. Your callsign is calculated to call attention to you (not necessarily your breasts, but that's a logical consequence) and your "in your face" attitude toward others. It has the effect of cheapening you personally, stripping you of your credibility, and creating an uncomfortable atmosphere around you in meetings of other hams who may quite rightly object to your choice of a call sign. Of course, you are in deep denial of all this, and that is understandable. Maybe someday you'll grow up, face the fact that you have cheapened yourself and all other YL hams with that call sign, and change it. When that day comes, if it ever comes, I will congratulate you for your decision. Until then, you will be the object of my scorn.

You may have cancelled your ARRL Membership, but I am afraid
that the greater percentage of hams will continue to send their Yearly
subscription (tribute?) to the snooty yankees in their ivy covered brick
walls at 225 Main Street, just like they have continued to do so for
the past 5-10-20-30+ Years. Just like the lemmings they are, they just
cannot seem to pry themselves away from that shi+ self-serving magazine
that's in reality, more advertising than relative topic. Truly pathetic.

(Tell me, does the ink in QST still rub off onto
your thumb when you rub the print like it used
to do in the 70's and 80's - before I wised up
and left these bastards subscripton letter in file 19?)

What I mean to say is, do they still use the same thin cheap paper stock
and that
half-assed ink that not only smells like acetone solvent, but is of a worse
grade than the ink used for the daily newspaper, which is usually cheaper.
Makes you wonder if their printer back then was some
New Haven sweatshop factory, staffed with min-wage wetbacks that ducked
outta sight whenever the INS van pulled up in the parking lot out
front.....)

Tsk, tsk, tsk, tyRoll apparently doesn't understand amateur radio regulations insofar as callsigns.

Kim's callsign begins with a W, not a T. W is perfectly legal and permissible for callsigns administered by the United States of America...as are those that begin with A, N, or K.

Go thee and put your asterisk on the Little Miss Muffet poem to understand who is the REAL vulgarity. We have met him and he is YOU.

Don't you have something more important to do? Like catch a bus or something?

Yours in excelsior (shipping costs extra if ordered from Newington),

That's incorrect Dan. I was an early '50s kid Novice. The OFs of those days more than just occasionally bent over backwards to make sure that I knew that I was at the bottom of the totem pole. In retrospect no doubt some of it involved the usual compulsive cocky male pubescent/male adult conflict which had nothing to do with ham radio. But it was also obvious that those OFs were also ticked off about the recent emergence of the 5 wpm code test which allowed us weenies to get on the air without having to go thru the same pushups they had to go thru to get on the air. There were neighborhood radio clubs which didn't allow full voting memberships to Novices and Techs.

It's all just cycles Dan and the 1968 maneuver was not the first cycle by any means and welcome to the current cycle. There will be others.

I beleive the R2 bandplan allows phone down to 7045, same as R1. In R3 it's 7030! R2 hams operatong phone 'on 7050 and lower' are abiding by the ITU bandplan unless they go below 7045.

>

It's my opinion that my callsign would be totally innocuous unless someone sat there and thought about it for a bit--if even then. And, if must "finally realize" anything about a callsign, then it is definitely because they took their own path getting there; not because anyone led them there. To make that a bearer's responsibility to "the community of man" is ridiculous and I don't wear that crap.

>
> Dwight, you previously said you didn't know any parents who would
> keep their kids out of ham radio over a callsign like Kim's. Well,

> impression involved such callsigns.
>

Then, they'd best just keep their kids out of sports, school, movies, churches; in fact, just lock 'em up and keep 'em safe. The responsibility of the parent is to teach what is vulgar and what is not. My callsign is not vulgar. The implication that breasts are something to hide, be embarrassed about, think of only in a sexual manner, etc., is the vulgar act.

> >
> > as someone else pointed out, if a kid derives the word

> irresponsibly, cussing, etc., will be influenced to try the same or
> similar behaviors themselves *IF* those behaviors in adults are
> portrayed as acceptable, "fun", glamorous, etc.
>

And, it is not the responsibility of "the community" to see that a kid
doesn't learn all that stuff and think it's attractive. It's the
responsibility of the parents, family, and anyone personally involved with
the raising and upbringing of a kid. I taught my kids that all "that stuff"
was all over the place. One of them learned that it was not attractive and
lives responsibly, one of them thought most of it was great and barely
accomplishes anything each day. I must have succeeded with one and needed
to work a lot harder with the other. They *both* saw the same "community."

>

> much more likely to learn that lesson.
>

That's a copout--to ignore the advice of someone because of what they are
doing. I'd much rather take advice from someone who's been through what
they are preaching against than someone who's never been there. The phrase
"lead by example" has some truth to it. But the phrase "learn from the
mistakes of others" has much more weight, in my opinion. Here, you were
sitting right there listening to those lecturers preaching against the evils

as they partook in something you believed was evil and you still ignored the value they taught--or at least devalued it, it looks like.

> >
> >*Anyone* who thinks

> behavior is appropriate in all contexts.
>

The good work of their parents, no doubt. Pffttt. With regard to breasts, they can be a work of art, a tool of health, the target of the expression of love, or represent some evil, twisted, sense of wrongdoing. I choose the beauty of breasts--not the twisted logic. It's exactly like nude art. I would never gasp at a child looking at a nude statue, or painting, or photo, etc. I would ask them what they found beautiful.

>
> Same principle as teaching them it's OK to pull their pants down in the
> bathroom or doctor's office, but *not* OK to do in public! Even though
> everyone knows what's under their clothes, what those body parts are
> called, etc.
>

It's your expression of "those body parts" that, to someone like me, worries me. Those body parts are to be spoken of, not hidden in some closet because they are horrible. "Those" body parts can be beautiful or dangerous, and both must be recognized. When someone is pulling their pants down at the doctor--it is quite OK, at least one would think; when someone is pulling their pants down in public--it is quite not OK. However, in the right circumstances both could be exactly the opposite. If a doctor--and this has been done--is about to rape someone, then it's evil. And, I can think of nothing better I would love to do to someone like Saddam Hussein, than to moon him with a thousand milliion asses; or even just one: mine.

> >
> > Sad but true.
> >
> The reason it's like that is the failure of adults to act appropriately.
>
> 73 de Jim, N2EY
>

Yep. You're exactly right. However, it seems that your "act appropriately" and mine are two entirely different things. And, I'm done--sigh, once again--discussing my callsign. It's valid, it's beautiful, it's fun, it's

mine. Period.

Keep in mind that outside the US, those are just band plans. According to
postings I read elsewhere, they are ignored with some regularity. It
becomes even more common to ignore them during some contests.

> Unfortunately, that's not quite how it happened.
>
> FCC thought that hams would go for the Extra after 1953 simply
> "because it
> was there". And some did - but not many. ...

Please cite references. I have before me two historical accounts
which both agree that the ARRL first broached the subject of incentive
licensing, as well as the QST editorial from 1963 which rationalized
```

it. Web pages such as "The Wayback Machine" also agree that the League first proposed the changes which were finally implemented in 1967.

In fact, http://www.qsl.net/ecara/wayback/page14.html goes on to say:

"On May 3, 1963, the ARRL Board of Directors adopted their official position on incentive licensing. Their proposal would completely take away all General and Conditional class phone privileges on 75, 40, 20, and 15 meters in a two-year phase-in period. In other words, the ARRL's incentive licensing would only allow HF phone operation for Generals and Conditionals on 10 meters and on the small sliver of 160 meters that was available in the days of LORAN Radionavigation. The ARRL also suggested reopening the Advanced class license again to those who held a General or Conditional license for one year. Strangely, the ARRL did not suggest that Extras be given exclusive frequencies, nor did they propose exclusive CW frequencies. Rather, they just wanted exclusive access to the 75 through 15-meter phone segments for the Advanced and Extra class licenses ..."

Based on all of these items, it appears to me that your account could well be someone's revisionist history. I can find nothing in the literature to support it, but can easily find material which refutes it.

I can't speak for hams in every country in the world, but being originally from the UK I would say that most there would be horrified at the idea of operating phone below 7040, for example. The cutoff used to be 7040 before they set aside 7035-7045 for RTTY. That is one aspect of it being voluntary, you will find people who continue to use a frequency after the bandplan is changed. In a similar way, phone is supposed to be above 14.112 on 20, but it used to be 14.100. The RTTY sections were carved out of the top of CW and the bottom of phone.

Phone below 7.040 or below 14.100 is not something I hear when I tune around. It's easy for US hams to form an impression that there are lots of DX hams operating phone on CW frequencies, but there really aren't. It's just that few realise how far down phone extends in the IARU bandplans.

Contests are another matter, but that cuts both ways, i.e. you will also find CW on phone frequencies during CW contests.

A coaxial cable lying over the peak of a roof is the same length on each side. It weighs one third of a pound per foot. On one end hangs an Extra holding a dipole, and on the other end a weight equal to the weight of the Extra. The dipole weighs two ounces per inch. The cable is as long (in feet) as the age of the Extra (in years), and the weight of the Extra (in ounces) is the same as the age of the Extra's mother. The combined age of the Extra and his mother is seventy years. One half of the weight of the Extra, plus the weight of the dipole, is one forth as much as the weight of the weight and the weight of the cable. The Extra's mother is half as old as the Extra will be when he is three times as old as his mother was when she she was half as old as the Extra will be when when he is as old as his mother will be when she is four times as old as the Extra was when he was twice as old as his mother was when she was one third as old as the Extra was when he was old as his mother was when she was three times as old as the Extra was when he was one fourth as old as he is now.

How long is the dipole?

Let's be open here, "Leo". You aren't sorry and I'm not having
difficulty. You wrote of denying "rights". I responded to that
comment.
If you didn't really mean "rights", you should have chosen another term.
If you're intent was to illustrate something other than what you stated,
your illustration fails.

My point, again, is that Kim, as a fellow amateur, has every right to
expect to be treated as an equal by her fellow amateurs. Omitting just
her call in the list was not a fair thing to do . Period. I have
not, and would not, insist that Jim use her call in any of his posts,
as it violates his standards. But, leaving only hers out treated her
as less than equal. Period.

I cannot illustrate the point clearer than that for you, Dave. If you
want me to explain it any simpler than this, I'll have to use crayons
and stick people.

Was there a fine or some other penalty involved? Or did they understand
that it was an oversight and told them you won't do that again? I once
did a
similar mistake (I was in band for my license but was a wrong mode,
i.e., SSB
in the CW/data segment answering some DX on 40) but soon spotted it
and stopped doing it. Haven't heard anything from the FCC, I think they
know people occasionally make such mistakes. But if someone keeps doing
it then watch out.

I think you meant to say no "additional" written test, Mike. I suspect the idea comes from the fact that the current Technician license already allows HF access with the simple addition of the code test. In other words, the current Technician license exam already covers much of the material needed for HF access. Therefore, it makes more sense to grandfather them into a license class with HF access than into one without. Of course, that's just my take on it. If you really want to know why ARRL decided to do so, ask them.

When I got my "extra lite" :-) I made a number of "newbie" type errors,
but soon learned.
What I don't like is when, years before on learning my way around packet
on 2m, I made
some newbie errors and then learned, but some other packet operator
assumed that
I would always make such errors and got banned off his maibox BBS. (I
hadn't distingushed
between private mailboxes and more public BBSs just yet, and posted a
general ham interest
article). A polite but firm correction would have been enough. Turns
out other people
had some problems with him....

> sat there and thought about it for a bit--if even then.

Others disagree with that. And I think if you really believed it were
"totally
innocuous unless some sat there and thought about it for a bit", you
would
not have chosen it, because you've said it was chosen in part for the
reactions it would get.

> And, if must
> "finally realize" anything about a callsign, then it is definitely because
> they took their own path getting there; not because anyone led them there.

I disagree. The callsign starts them on the path. Otherwise you would
not
have chosen it.

> To make that a bearer's responsibility to "the community of man" is
> ridiculous and I don't wear that

[expletive deleted]

You may refuse to "wear" it, Kim, but communities live and die on how
well
their members accept their responsibilities to the community. One
reason for
so many laws that seem silly or stupid is that they are an attempt to

get
people to take on their responsibilities to the community.

> > Dwight, you previously said you didn't know any parents who would
> > keep their kids out of ham radio over a callsign like Kim's. Well,

>
> Then, they'd best just keep their kids out of sports, school, movies,
> churches; in fact, just lock 'em up and keep 'em safe.

Why? In my experience, they will not encounter things like your
callsign
from adults in sports, school, or church. At least not in any of them
that
I have been a part of in the last 10-15 years. Movies are not only
rated
by content but kids under certain ages are not permitted to see
certain
movies because of content - a good example of the community taking
responsibility.

> The responsibility
> of the parent is to teach what is vulgar and what is not.

Not just the parents. (Each child has at least two). It's also the
community's responsibility - meaning everyone in the community.

> My callsign is not vulgar.

Not to you. Others differ on that.

I say it's inappropriate.

> The implication that

[body parts]

> are something to hide, be
> embarrassed about, think of only in a sexual manner, etc., is the vulgar
> act.

Would you then say that they are no different from, say, a hand or a
nose?
Would you say that it's always appropriate to display them, talk about
them,
etc., regardless of the context or the situation? That's where you're
argument
leads.

> > portrayed as acceptable, "fun", glamorous, etc.

>
> And, it is not the responsibility of "the community" to see that a kid
> doesn't learn all that stuff and think it's attractive.

Yes, it is. That's one major reason to be a part of a community - so
that
the next generation can be raised in an environment that passes on the
best of the previous generation's values and standards.

Communities can only exist and thrive if the people in them are better
off
being a part of them, *and* realize and fullfil their responsibilities
to the community, as well as demanding their rights.

> It's the
> responsibility of the parents, family, and anyone personally involved with
> the raising and upbringing of a kid.

How can they do that if the community works against them? It's
everyone's
responsibility, in varying degrees.

> I taught my kids that all "that stuff"
> was all over the place. One of them learned that it was not attractive and
> lives responsibly, one of them thought most of it was great and barely
> accomplishes anything each day. I must have succeeded with one and needed

> to work a lot harder with the other.

You just proved what I'm saying is valid.

It's clear that they were both exposed to things that were
inappropriate or even
potentially harmful, but one was able to resist and the other wasn't.

Here's an analogy:

Almost everyone has an "Aunt Edna" who has smoked three packs of
Camels a day since he was 12 and who is now hale and healthy in his
90s. And almost everyone also has an "Uncle Bill" who passed away at a
young age from a combination of health problems brought about by
smoking. A lot of people - particularly smokers - remember Aunt Edna
and forget all about Uncle Bill. Some even claim
that Aunt Edna somehow proves that smoking isn't that bad for you.

But what the Aunt Edna/Uncle Bill story proves is that a few people
are very
resistant to, and a few others very susceptible to, health problems
caused by smoking. And most people are somewhere in the middle. More
important, you can't tell ahead of time who is going to wind up like
Aunt Edna and who is going to wind up like Uncle Bill. So the
intelligent, reasonable, logical, human thing to do is to act as if
everyone has Uncle Bill's susceptibility, not Aunt Edna's resistance.

> They *both* saw the same "community."

No, they did not. Communities are constantly changing. I suspect what
really happened was that one was simply more resistant to certain
things and the other more susceptible.

> > I recall quite clearly how, as a teenager, I and my peers were subjected

> > much more likely to learn that lesson.
>
> That's a copout--to ignore the advice of someone because of what they are
> doing.

No, it isn't! Regardless, it's what kids do. Kids see such behaviors
as hypocrisy on the part of the lecturer - and their right, because
the 'adult' is really saying "Do as I say, not as I do".

Would *you* accept "Do as I say, not as I do".

> I'd much rather take advice from someone who's been through what
> they are preaching against than someone who's never been there.

The adults were preaching against stuff they hadn't done (smoke
grass). Their argument was against "using drugs as a crutch" and told
how they were "bad for you" and "addicting" - while they themselves
ingested substances that were all those things.

> The phrase "lead by example" has some truth to it.

Exactly! Adults must set the example of how to live responsibly.

> But the phrase "learn from the
> mistakes of others" has much more weight, in my opinion.

That's fine when it's about things like falling off a ladder. Not when
it's about things that appear to be "fun". And not when the lecturer
keeps on making the mistakes.

> Here, you were
> sitting right there listening to those lecturers preaching against the evils
> as they partook in something you believed was evil and you still ignored the
> value they taught--or at least devalued it, it looks like.

That's *exactly* how *kids* think! Once they detect "do as I say, not
as I do",
they use the adult's behavior as an excuse. That's not mature, adult
reasoning, but it's what many if not most kids do - particularly when
someone is telling them not to do something that they think might be a
lot of fun.

You cannot always treat children as if they are adults in smaller
bodies. To do so is inappropriate and potentially very harmful.

> > >*Anyone* who thinks
> > > kids are still that innocent these days, has not been on a schoolyard or
> > > listening in on kids' conversations when they think no one is

> > behavior is appropriate in all contexts.
>
> The good work of their parents, no doubt.

And their community.

> Pfftt.

What does that mean? Would you rather have them talk that way all the
time, in all contexts?

> With regard to

[body parts]

> they can be a work of art, a tool of health, the target of the expression of
> love, or represent some evil, twisted, sense of wrongdoing.

Yep - it all depends on the context. In some contexts their
appropriate, in others their not.

A thumb is usually innocuous. A nose is usually innocuous. Thumbing
one's nose isn't.

> I choose the
> beauty of

[body parts]

.--not the twisted logic. It's exactly like nude art. I
> would never gasp at a child looking at a nude statue, or painting, or photo,
> etc. I would ask them what they found beautiful.

It's not about gasping. It's about what is appropriate. Is it
appropriate for children to see each other naked? Naked adults? To let
adults see them naked? All depends on the context. For example, health
care is a different context
than trying on clothes.
>
> > Same principle as teaching them it's OK to pull their pants down in the
> > bathroom or doctor's office, but *not* OK to do in public! Even though
> > everyone knows what's under their clothes, what those body parts are

> >
>
> It's your expression of "those body parts" that, to someone like me, worries
> me.

Why?

> Those body parts are to be spoken of, not hidden in some closet because
> they are horrible.

They're not "horrible". They're PRIVATE.

>"Those" body parts can be beautiful or dangerous, and
> both must be recognized. When someone is pulling their pants down at the
> doctor--it is quite OK, at least one would think; when someone is pulling
> their pants down in public--it is quite not OK.

Why? It's the same action, isn't it? The same beautiful body parts
that you say must be spoken of, right?

Could it be that what may be appropriate in the doctor's office is not
usually appropriate in public?

> However, in the right
> circumstances both could be exactly the opposite. If a doctor--and this has
> been done--is about to rape someone, then it's evil.

Of course. But that's not the point. The action described is only
appropriate in a doctor's office if it's medically required.

> And, I can think of
> nothing better I would love to do to someone like Saddam Hussein, than to
> moon him with a thousand milliion asses; or even just one: mine.

Again, an extreme that proves *my* point.
>
> > > Sad but true.
> > >
> > The reason it's like that is the failure of adults to act appropriately.

> Yep. You're exactly right.

Well, there you have it.

> However, it seems that your "act appropriately"
> and mine are two entirely different things.

I sure hope so!

> And, I'm done--sigh, once
> again--discussing my callsign.

Maybe.

> It's valid, it's beautiful, it's fun, it's
> mine.

That's your opinion. Here's mine:

It's inappropriate for the ARS.

It helps the ARS move one step closer to extinction.

Period.

>73 de Jim, N2EY

I brought this subject up with someone in the League. This exact
thread, actually. I was told that the ARRL BoD sincerely believes (take
at face value, or not) that failure to upgrade licensees in the FCC R&O
for WT 98-143 was not a final "no" answer. Rather, it is just one of
the unresolved loose ends that was deliberately not tied up until better
consensus emerged from the amateur radio community about things like
Novice band refarming, etc. The League official noted that the ARRL's
band refarming proposal, RM-10413, has been sitting on an FCC official's
desk for about two years now (he claims to know the exact FCC official,
but did not name him). Because of this, as long a wait, if not longer,
is expected on a "final" answer concerning automatic upgrading.

Really? Can you show even one example of someone who has kept their kid out of Amateur Radio because of Kim's callsign, or any of the callsigns I've listed over the last couple of days? I haven't seen one person of the child rearing age group voice a single complaint about this in this newsgroup. Instead, I see old men, some too old to even have young, impressionable, grandkids, in a newsgroup acting like hearing the word "tit" was the shock of their life. I'm not buying it, Jim. This whole debate has a ring of false indignation around it. Kim's callsign is only as vulgar as you, the person hearing it, makes it. I don't think tits are vulgar, and I hope kids don't think that (if they do, someone certainly failed to educate them properly).

You're absolutely right, Dee. I do live in an environment where tits, breasts, and other words to describe the human body are not outright, and immediately, derogatory or vulgar - only a certain context makes them so.

Since you asked....I called the office in Cleveland that issued the notice.
During the conversation I was asked 'where have you been not to know of this
change?', or something to that effect. My response was that I had just got
back from Nam and wanted to play radio again. The notice was thrown out,
no fines or warnings other than to use a higher crystal..hi.

I too appreciate the detailed references. Facts are always good to have. I
was unaware that the initial concept was put out by the ARRL. I was looking
only at the final version that the FCC developed, which was substantially
different than the ARRL's proposal and which the ARRL then opposed due to
these significant differences.

FYI, in conversation, I prefer Dee rather than Dee D even though I use more formal signature.

Great article! Thanks for posting that link. I learned a few things I never knew before. (I was just starting to get interested in radio in 1963.)

It's amazing that ham radio has survived at all when you consider how much needless tinkering with the license structure has gone on over the years, and how much discontent it has created.

Leo, what about those that don't want to play the game? Kim stated in her post of 05/23/2000:

<From Kim's post>

Kim> Oh, yeah. The best part. What DID I have in mind when I chose the call?
Kim> The fact that it would get the attention of the male ego...just as it has.
Kim> And that's all. No body parts, nothing about it at all, except what
Kim> thoughts the three letters t-i-t would have on the male persona.

Back to me:

Sooooo, you and Jim and all the others carrying on with this simply allows Kim to achieve her stated goal. She's cast the line, and quite frankly, you all have swallowed the hook gut deep.

While we are being frank, I must commend Kim for what is a permanent, and apparently irresistible troll. There is no doubt that this one subject may overtake the Morse code subject if Kim hangs around here long enough!

And although it would appear that Kim says that her callsign is not based on some body parts, earlier in the same post she writes:

Kim> I told them one day about how virtually boring they were being and couldn't
Kim> they come up with *anything* but initials! Well, the first sarcastic remark
Kim> was a question about what I would get if I were to get a vanity callsign. I
Kim> was actually in deep thought, as one of them keyed up and said that my
Kim> vanity was in my chest so how could "we" come up with a callsign that would
Kim> be related to that? HA! I keyed up and simply told them, that I would get
Kim> K5TIT if I could.

Back to me:

There it is. Kim might be better able to explain the difference, I read it as a body part related to the chest, but it doesn't matter. The callsign is a troll regardless of whether it refers to body parts or small birds. (Tifted tutmouses) 8^). And Kim enjoys better success with it than Lenover21 does with his "designed to engage" posts.

I don't think a batch of newcomers can unleash any more unholy blasphemy onto the HF bands then what has already been said and done.

Most of the conversations I've heard on HF sound like rowdy barroom talk or a bunch old maids sitting around on deflated hemorrhoid cushions complaining about poor health and cat food.

And in kim's case, where the callsign was choosen specifically to get a
reaction to the word "tit", that puts it in that context.

< Not atall. I just haven't seen anything convincing.

With all due respect, you're the one that advanced the notion that Barry Goldwater had authored some legislation the give Novices free examinations, but have no evidence of that other than you "read something". Strike #1.

The FCC rules allow ALL exams to be free, so there'd be no need for a separate legislation to give free exams to Novice applicants. Strike #2.

There is media evidence contemporary to the era which shows one VEC trying to persuade the FCC to REQUIRE all other VEC's to charge a fee for the Novice exam. Strike #3.

Looks to me that YOU'RE the one who needs to show US something "convincing".

Good luck on this one now.

Tifted tutmouses? I think I saw one of them last summer!

Mike, you may well be correct in your analysis - a callsign such as that one could well be used in many different ways (troll being one of them). Troll itself has different connotations - it could be an icebreaker ,convesation starter, or usenet WMD - depending on its use, and the actions of the user.

My arguement has from the beginning focussed on a very specific part of this overall issue - the exclusion of only one call from a list, while leaving the others intact. The reason being - if the folks who complain so vehemently here believe that Kim's call/behaviour/language/whatever are obscene, inappropriate, high in transfats or otherwise detrimental to the sanctity of the group, then the appropriate thing to do would be to ignore or killfile her, and be done with it. Why would anyone wilfully and intentionally annoy her by intentionally removing her call from each post time and time again? Unless there are other agendas....like to elicit a predictable reaction, perhaps.....

I suspect that some of the folks here are using the issue of her call as a springboard to voice their pedantic, didactic, sanctimonious, gynomammarophobic [that last one's a Leo word :)] and occasionally bombastic beliefs and viewpoints. The net result is similar to pouring gasoline on a fire - Kim responds in defense, ups the ante, and the PDSG&OB gang goes at her for another round, etc. etc. A chain reaction, in the truest sense.

The only reason that I personally have continued with this for so long is to attempt to stick with and get across my original point. Which ain't easy, given the back and forth exchanges between Kim and the boys since this thread began......and the countless attempts to divert attention from it off onto related (and easily defended) issues.

Anywho, my philosophy is that if you treat someone fairly and they behave inappropriately, you have a good reason to fault them for it. If, on the other hand, you pi&& them off first and get them good and

angry, you forfeit that "hey, I'm innocent!" defense - and share in the blame.

Trolled? Perhaps! But I really don't recall Kim doing anything incorrect or inappropriate at the outset of this, other than the reediting of Jim's posts - she seems to have simply wanted to be treated equally as an amateur. Mike, I believe that you yourself redid the pool to reduce it to all first names at one point - an intelligent and compromising way to diffuse the situation. But diffused it would not be (and not beacuse of Kim's actions...) - so here we are.

Forgetting for the purpose of this issue the past - um - interchanges on this subject between Kim and the resident keepers of order and decorum in this forum, the gross anatomy lessons came later....when this thread was already running hot!

He does? He doesn't believe that he is Kim, he doesn't believe that
he is Mike, he doesn't believe that he is Len. He doesn't believe
that he is Leo.

But Dave still has problems relating to other people.

Ah, more smugness.

You don't have to accept it. Your acceptance or rejection alters nothing.

Thinking that it does is just smug.

Hansel, you were asked IF you would knowingly work an amateur that was
out of band. You were not asked if you knew what the French amateur
allocations were.

Your reply indicates that, YES, you would knowingly work another
amateur if he were out of band.

Would you like to change your answer at this time?

Thanks

Well, that leaves me out. I'm not shocked by it at all. Heard it plenty of
times.
In fact, years ago National Lampoon did a canonical list of the various slang
names for certain body parts. Ran to hundreds of words.

I simply say it's inappropriate for ham radio, that's all.

Do you think it's appropriate?

>I'm not buying it, Jim. This whole debate has a ring of false

How is it totally different?

If anything, the license system was fairer because it was based on knowledge
and skill rather than how many $$ you could throw at the local radio store.

Heck, as a high school kid there was no way I could have had a Collins, Drake
or even a Heath/SB station. Even if by some miracle I'd gotten the money, it
was needed for other things. There was *no way* I could join some of their
ranks. But I could earn the highest class of license.

And in the mid-60s there were still some who did similar things. Indeed, there were Advanceds who looked down on Generals, Generals who looked down on Conditionals, Conditionals who looked down on Techs, and Techs who looked down on Novices. Etc.

And it wasn't just kids vs. adults, either.

Then as now, they were few - but noisy.

Maybe it was different where you were, Dan.

>It's all just cycles Dan and the 1968 maneuver was not the first cycle

>League first proposed the changes which were finally implemented in
>1967.

First off, recall that the reasons given for "incentive licensing" were things like the trend towards decreased homebrewing/experimenting and increased 'appliance operating', use of HF DX bands for local communications, perceived lack of technical knowhow and operating skills, etc.

>I have before me two historical accounts
>which both agree that the ARRL first broached the subject of incentive
>licensing, as well as the QST editorial from 1963 which rationalized
>it.

Which 1963 QST editorial on the subject? There were several of them, not just one. February, March, June, July, and November. The early ones ask what members think, the later ones tell what the ARRL BoD proposed and why.

Here's the first reference I found - not the only one, just the first:

QST, June 1963, page 9, in the editorial:

"A number of persons highly-placed in the communications regulatory field, thoroughly experienced in international conference matters, and amateurs themselves, have joined us in expressing concern over the recent trends in amateur radio. They agree we must adhere to our basic principles more closely if we are to keep any semblance of our frequency assignments. They feel that amateur radio has been built on a sound basis, and is largely in a healthy condition, but is tending to move in the wrong direction. They predict that a conitnuation of the present trend will most certainly cause us severe difficulty".

Now, who are these "persons"? Obviously they're folks at the FCC, saying in so many words that they're concerned about the way things were going and that if the something wasn't done, we'd be in "severe difficulty".

Was ARRL's proposal the first? Yes! But it's clear to me that FCC passed the word along that *something* had to change, or there'd be big problems ahead for hams.

It is also interesting to read the "Correspondence" section. Lots of folks for and against any sort of license changes. There were some who were extremely ticked off that ARRL even asked the question - and this was *before* any decision was reached by the BoD.

Most interesting of all was a 5 page article in QST for October, 1963, called "Two Plus Two Equals Four". It's basically about how amateur radio had to justify its existence as more than "just a hobby" in order to survive as a service, and which subtly but clearly pushes the IL agenda. The author was known as W0DCA, W4CXA - and also as A. Prose Walker.

Exactly.

Which is why, a few posts back, I quoted Maximus:

"ARE YOU NOT ENTERTAINED?!"

|

There's a reason for that. Frank is, IMNSHO, is among the top 3 best Director's who ever wore the red badge. He understands ham radio, he understands that he was elected to be a leader, not a manager, and he has the courage to look beyond the popularity surveys and support what is best for Amateur Radio (which isn't always what is most popular with the vocal minority).

The SE Division is a lucky bunch.

All very interesting and sanitized I am sure. IMHO the reality of it all
was the 'CLASS A' crowd were pissed because of the Technican and Novice
licenses and wanted a return to the pure days of pre war USA.

So they tried to hornswaggle to FCC and the amateur community. It didnt
work then....and it won't work now. Hams are not that dumb.

Ummmmm, I did not choose T-I-T, I chose *W* *5* T-I-T. Wishing me to drop my callsign would be about like telling Dolly Parton to cover up before she gets on stage. Her boobs are one of her trademarks--at least to the public. Oh, wait, you may find her vulgar also...

You stated in a previous post that you knew the callsign would get a
reaction, that is why the T-I-T part of your callsign was chosen. If it
is just another call sign, why did you expect a reaction?
Why didn't you choose some other suffix? Why TIT? Here is why in your
own words.

"I jokingly told my fellow hams one day (all men, of course) that it was
silly to get initials for a vanity callsign--one should put some real
punch into a vanity callsign."

You wanted some "punch" in your callsign, thus the suffix "TIT" as it
references your breasts, thus getting the attention and reaction you so
desperately want.

You also stated, "The fun that evolves out of it is a great bonus." In other words you new the reactions it would give, and you enjoy the comments about your callsign and it's reference to your breasts. If it were just a callsign like any other, there wouldn't be any fun that evolves out of it and a great bonus would it?

Extremely poor taste.

No, they are no different than a hand, a nose, a foot, all of which could be
sexual appendages at some point. But, *in the right context* they (tits)
are just as bland and boring as a nose, a foot, or whatever.

And, as to displaying them, I personally have no problem at all with nudity
in general. I am not prone to "automatically" assume a nude body is for
sex, or something vulgar as you may describe it. I think it's darned unfair

that men can run around showing their tits, when a man is just as likely to get aroused by someone playing with their nipples as any woman is. What's the difference whether a man goes topless or a woman goes topless?

What do you mean "would you"? I did. My parents morals, objective lessons, words of wisdom, etc., were never questioned by me. I knew that they were right because, as my mother would tell me "if you start smoking now, it will be extremely difficult for you to quit when you learn how bad it is," as she was puffing on her cigarette--I knew how much she wanted to quit smoking. I saw no contradiction whatever in what she was saying. She was right. Did you go around expecting everyone to live as they preached? I certainly didn't. I learned far more things by observing that maybe there was a reason for the lecturer lecturing against something while they were "doing it."

Your philosophy is different than mine, then. Either it is or it ain't. If I believe the phrase "learn from the mistakes of others" is pertinent and that I've learned more from it than those who tried to lead by example, then I believe it across the board--not selectively. And, I believe it.

How could someone who sees a parent smoking, hacking, stinking up the place, chained to the cigarette, ever think smoking could be a lot of fun?! I used to smoke, but not because I thought it was fun. I think I probably started to get in trouble--get the attention of my mom so she'd quit. Heh heh...but it didn't work. I just quit about seven years ago.

Sex? Oh, no way that could be any fun. I grew up in a town of less than a thousand people and I saw teen-aged girls getting pregnant at like 13!! Wasn't no way that was fun.

> >

I think it's appropriate and natural to have children see each other nekked. By the way, why are you so huffy about not printing a callsign (all inclusive with its prefix and suffix) but you'll bring up and print the subject of "naked adults?" I mean, really...where is your logic in *that*?

Anyway, and as to adults being naked, I used to take showers with my kids (sons) when they were little, stopped probably when they were--oh I don't know--3 or 4. Was that, in your opinion, vulgar?! Good grief, I hope not. But, as I said, have it your way. And, why *is* it OK for nudity when one is, presumably, an infant or toddler and then, just as they are probably quite comfortable with the nude body--we suddenly decide "OHMYGAWD...you can't see me *THAT* way!!!" Whaddup wid dat?

>
> Why?
>
> > Those body parts are to be spoken of, not hidden in some closet because
> > they are horrible.
>
> They're not "horrible". They're PRIVATE.
>

Maybe to you. And that's your right to believe like that. But, don't make a judgement call--and you have--about someone who thinks it differently than you. And, by the way...leaving my callsign off the list has nothing (for me anyway) to do with how you think of my callsign. Either leave me off altogether, as you could have done; or put it up with the same import as each and every other ham. And, by the way, I am pretty much going to quit debating the topic because it's pretty darned obvious that we disagree--wholeheartedly--on this. You've turned it into a debate about my callsign. The issue isn't *why*, it is that you did and that you could have handled it differently. Don't whine about, "but you are trying to tell me I have to use a callsign I find objectionable...wa wa wa." I am not at all, neither is Leo, or anyone else. The point is you could have left my name completely *off* the list.

Golly gosh,

I thought we both had burried the hatchet a while back. We put aside some differences in our battles with Roger Wiseman. I never had alot against you. I am sorry I can't please everyone, Dan.

I am sorry you cannot see past yourself on this ARRL proposal. In the long run, it'll be the best thing. I felt exactly the opposite, before the proposal. I was debating on wheather to renew or not. But the ARRL had great news. I am sorry that you will not benefit like I will.

At least I tried.

Lloyd

Bad guess. A couple examples were EEs who were too old to serve in WW2
but who put in 70 hrs/week at the submarine communications lab here
"for the duration", another was an M.D. and some others of their ilk
who twisted me six ways from Sunday about being a Novice just to see
what would happen. Which I probably deserved quite frankly. Those were
also the days when the door prizes at company functions were cartons
of Luckies passed out by "the prettiest secretary". Check yer
extrapolaton methods Casey, some of of those curves are horizontal
lines (beasting on 5 wpm newbies in 1953 and in 2004 is one) and some
AIN'T.

Actually, I got 2 Icom handhelds for that price from HRO. They sure
beat FRS for keeping contact withs the kids. Getting a tech liscense
for the kids isn't too hard either. You get a whole family of hams
that don't need to pick of a cell phone around town. They don't need
FRS with it's crowded bands and you get much greater range.

You're correct, I chose T-I-T for the suffix of my callsign; however, I did
not choose the name "tit," the nickname "tit," or the *word* "tit." I also

did not choose the *callsign* W5TIT for vulgar, sexual, or otherwise negative reasons. All of you who feel it is have dreamed that one up on your own.

So, boring, mundane, random, etc., is your way of defining what is "right." Again, you've dreamed that one up on your own.

> You also stated, "The fun that evolves out of it is a great bonus." In

Oh, so you know of others who don't have "fun" callsigns. Gosh...maybe you should get yourself, and them, into something a whole lot more fun. Because, for you to be so obsessed over an innocuous callsign just lends itself to your misery of being in the hobby around such questionable, deranged characters such as me.

>was the 'CLASS A' crowd were

[expletive deleted]

> because of the Technican and Novice
>licenses and wanted a return to the pure days of pre war USA.

Dan,

Why would the "Class A" folks be angry about Techs and Novices? The Techs were all on VHF/UHF, and the Novices were limited to little bits of three HF bands with CW only, plus a bit of 2 meters.

It would make much more sense that they were still grumbling about the Great Giveaway of December 1952, which gave all privs to Generals and Conditionals. Previously, if you wanted to work 'phone on any ham band between 2 and 25 MHz you needed an Advanced (Class A) or Extra. Opening up the 'phone bands in early 1953 flooded them folks who had taken much easier written tests than the Class A crowd.
>
>So they tried to hornswaggle to FCC and the amateur community.

Well, they *said* they had majority support, and if you look at reports of the time about FCC comments it seems that they did - a very slight majority.

When you've got folks like A. Prose Walker saying something needs to be done or the ham allocations will be in big trouble, should he simply be ignored?

>It didnt
>work then....and it won't work now.

It seems to me that what happened then was that they raised the number of steps and the requirements for a full privs license. Now, it seems that most proposals, including ARRL's want to *lower* the number of steps and the requirements for a full privs license. (Isn't that what happened in 2000?)

But I'll agree with you on this: Monkeying with the license requirements will have only slight effects in what hams actually do. Did taking all those IL cause lots of hams to suddenly put down the checkbook and pick up the sodder arn? NOPE!

73 de Jim, N2EY

Hams are not that dumb.

>
>Has nothing to do with it. The point of the propsal is to simplify the
>license structure, the testing process and the record keeping.

The structure for new hams is already simplified - Tech/General/Extra.

The testing process is already simplified - Tech/General/Extra.

The record keeping is trivial - one field in the database. N/T/P/G/A/E

It's a needless pushup to combine the classes.

>There
>are little to no differences in the levels of difficulty between the
>Extra and Advanced writtens and they both cover the same general
>material in the same depth.

Then any Advanced who wants an Extra should have no trouble passing the test.

>tests. All of which has clearly rendered the Advanced redundant today
>so it should be done away with if we expect any significant
>streamlining of the regs.

Coupla lines in the regs say what an Advanced can do and what element credits
an Advanced gets. Your streamlining would eliminate maybe two paragraphs.

>upgrade. I like it.
>
Me too, but I say give 'em good slices of 160 thru 10, including 20 and WARC,
not just the same old 80/40/15/10. In fact I see no reason not to give 'em all
of WARC and most if not all of 160.

I don't normally respond to anonymous trolls, but I feel compelled to
counter
your statements above.

IF you feel that the ARRL "is intent on destroying (your) enjoyment of the
hobby," you must get your enjoyment purely from a self-delusional sense of
superiority.

I've been licensed for well over 25 years. The ham bands have *not*
"become sounding like CB over the last 17 years" - there have always
been a few bad apples - MANY of them OTs who passed the 20 wpm
Morse test and believe they are some sort of gods.

Yes, new hams may make some operating errors and they may need
a little coaching and immersion in the "culture" of ham radio to get to
the point where they sound experienced. We ALL made such mistakes
when we first got on the air - learning by doing is the best way to learn.

So get off your high horse ...

I was unhappy with the ARRL's policy on Morse testing for a long time,
and I'm still not happy with the aspect of their new proposal that would
keep Morse testing for Extra. (Though I have nothing to gain personally,
since I'm already an Extra.)

HOWEVER, the ARRL does SO much good for ham radio that I finally
decided to take out a life membership - BEFORE their proposal came
out (not knowing what position they'd take on the code test).

If all the OT's bail out on the ARRL over this, they will be cutting off
their noses to spite their face.

I encourage everyone to maintain their ARRL membership. And, I
encourage those who aren't members to join. The best way to influence
the ARRL in a progressive direction is from the inside - join, then talk to
your ARRL Director, make your views known, and let him/her know that

your vote in the next ARRL Director election in your division depends on their performance.

73,
Carl - wk3c

I agree 100%. If one wants to influence the direction of change, they've got to get in there and do the work. "Taking their marbles and going home" accomplishes nothing except leave the field wide open for people with other viewpoints. It removes the necessary balance and resulting debate that is necessary for progress. Not everyone is going to agree with the direction and result but the effort that goes into it will usually (but not always) yield a better result than when a single point of view is allowed to be put into affect without the scrutiny that comes with such debate.

As far as the phone goes, I'm reporting what I've read posted by Europeans
rather than my own impressions.

At least for US CW contests, I don't find the CW climbing into the phone portions. In some cases the rules specifically state that the contacts are to be limited to the "traditional" CW portion. In the remainder of the cases, we're just so conditioned to sticking below the split point that we stay there anyway in a contest. Although the contesters do ignore the digital, etc bandplan recommendations.

Exactly.

So tell us what you think of the ARRL proposal, Carl. We already know about the code test, so let's just skip that part.

What do you think of:

1) the "NewNovice" idea? (easy entry-level exam, limited power, more HF modes and spectrum, less VHF/UHF)

2) closing Tech to new issues?

3) free upgrades for Techs and Tech Pluses to General?

4) free upgrades for Advanceds to Extra?

5) widening of some of the 'phone image subbands?

I say 1) and 2) are good ideas. The rest are bad ideas.

What say you?

Have you actually listened to CB lately? Ignoring the heterodynes from the
AM carriers, it sounds completely different than even a crowded during a
contest ham band.

Sure.... Even the best operators made errors when they first got on.
I don't mean malicious intent errors, but the traditional way of IDing and
such. "N2EY, WA2ISE and the group, 73s."

Also things like not tying up a contest op to get his call right as I
can listen
to subsequent other contacts to get his call right.

>

Well , this ain't rocket science, and botching the first few contacts
doesn't create
a hazardous condition. Not like learning to fly 747s.

You must not have been listening when I told you that the Technician
license was far too complex to be an entry level license. Maybe I
haven't wasted 17 years of ARRL dues after all.

> The record keeping is trivial - one field in the database. N/T/P/G/A/E

Needless complexity. Ah, thats right, you wanted more license
classes.

> It's a needless pushup to combine the classes.

There need not be classes, but a learners permit would be nice.

>was puffing on her cigarette--I knew how much she wanted to quit smoking. I
>saw no contradiction whatever in what she was saying. She was right.

Of course she was right.

But that didn't stop you from smoking. How many years were you a
smoker, Kim?

Your mother's actions had more influence than her words. Despite what
she said, you smoked anyway. And finally quit when - 10 years ago?

>Did you go around expecting everyone to live as they preached?

Nope. But neither did I think that it made sense to listen to someone
who *unrepentantly* lived one way and preached another.

Living one way and preaching another is a pretty good definition of hypocrisy,
btw.

And the fact remains that, logical or not, children are more influenced by
their parents' actions than their parents' words.

>I certainly didn't.

Yet you smoked for how many years?

> I learned far more things by observing that maybe there was a
>reason for the lecturer lecturing against something while they were "doing
>it."

But when it came to smoking, those words didn't stop you.

I don't know. But they do. You did.

>I used to smoke, but not because I thought it was fun.
>I think I probably started
>to get in trouble--get the attention of my mom so she'd quit.

And that was how many years ago?

>Heh heh...but
>it didn't work. I just quit about seven years ago.

My point exactly. Your mom's lectures were to no avail - her *actions* got you to start smoking, and to continue for years - decades.

Again, your story confirms the truth of what I'm saying. If your mom had not smoked, you would not have smoked either, because you would not have had to try to get her to quit.

Neither of my parents smoked when I was growing up. There were no lectures against it. Just the example. None of us kids got the habit, either. I tried it when I was 21 - went through two packs in about a week, decided it was no big deal and never had another one.

>
>> .--not the twisted logic. It's exactly like nude art. I

>> care is a different context than trying on clothes.
>
>I think it's appropriate and natural to have children see each other nekked.

So it would be OK with you for, say, 10-12 year old boys and girls to see each other naked?

>By the way, why are you so huffy about not printing a callsign (all
>inclusive with its prefix and suffix) but you'll bring up and print the
>subject of "naked adults?" I mean, really...where is your logic in *that*?

Are you saying that the discussion of naked adults is inappropriate?
>
>Anyway, and as to adults being naked, I used to take showers with my kids
>(sons) when they were little, stopped probably when they were--oh I don't
>know--3 or 4.

Why?

>Was that, in your opinion, vulgar?!

Kim - have I ever described *anything* here as vulgar?

I would say that for an adult to shower with children of the opposite sex - at any age - is very inappropriate.

>Good grief, I hope not.

Ask the experts.

>But, as I said, have it your way. And, why *is* it OK for nudity when one
>is, presumably, an infant or toddler and then, just as they are probably
>quite comfortable with the nude body--we suddenly decide "OHMYGAWD...you
>can't see me *THAT* way!!!" Whaddup wid dat?

Who says nudity for infants and toddlers is "OK"? Not me. It's necessary when changing diapers and such - but not after they're toilet trained.
>
>> Why?
>>
>> > Those body parts are to be spoken of, not hidden in some closet because

>> > they are horrible.
>>
>> They're not "horrible". They're PRIVATE.
>
>Maybe to you.

To a lot of people. One can go to jail for hauling them out at an inappropriate time or place.

>And that's your right to believe like that. But, don't make
>a judgement call--and you have--about someone who thinks it differently than
>you.

When you tell me not to make a judgement call, *you* are making a judgement call. What gives you the right to make a judgement call, but not me?

>And, by the way...leaving my callsign off the list has nothing (for me
>anyway) to do with how you think of my callsign.

The what's your beef?

>Either leave me off
>altogether, as you could have done; or put it up with the same import as
>each and every other ham.

You're not on the list anymore - by your own request. Didn't you see that?

>And, by the way, I am pretty much going to quit
>debating the topic because it's pretty darned obvious that we
>disagree--wholeheartedly--on this. You've turned it into a debate about my
>callsign. The issue isn't *why*, it is that you did and that you could have
>handled it differently.

Of course I could have handled it differently. But that would have compromised my standards. Which I would not do. Period.

>Don't whine about, "but you are trying to tell me I
>have to use a callsign I find objectionable...wa wa wa."

Where's the whining? I'm pointing out facts. Look at the posts where I was told what I should do, should have done, should post, should not post. Lotta judgement calls from others about what *I* should do.

>The point is you could have left my name
>completely *off* the list.

And then you would have whined and moaned about how you weren't included.

>> >"Those" body parts can be beautiful or dangerous, and
>> > both must be recognized. When someone is pulling their pants down at
>> > the
>> > doctor--it is quite OK, at least one would think; when someone is
>> > pulling
>> > their pants down in public--it is quite not OK.
>>

>> Why? It's the same action, isn't it? The same beautiful body parts
>> that you say must be spoken of, right?
>
>Hey! Now you're talking!

Exactly. So why will I get arrested if I do it in most public places?

>> Could it be that what may be appropriate in the doctor's office is not
>> usually appropriate in public?

>Well, there may be patients who wouldn't mind exams in public...I would,
>though.

Why? You said you have no problem with "nudity in general". Can't get
any more "general" than at high noon on Main Street.

Not at all.

But the amateur market is tiny compared to consumer electronics. Even if FT-1000s were $1000, how many would Yaesu sell in the USA per year?

One "problem" rigmakers have is that ham gear tends to have a fairly long useful life. A ten-year-old computer is generally considered to be almost useless today, even if it was top of the line when it was made. But a ten year old ham rig may be barely broken in. Going back still futher, not many people are still watching TVs made in the early '60s, but many 40 year old Drake or Collins lines are in daily use by hams - not out of nostalgia or technical inertia, but because they were and are pretty good rigs.

I say we should judge by actions. When FCC thinksa proposal is a good or bad idea, they act. How long did the whole 98-143 process take, from initial release of the NPRM to the new rules in April 2000?

More important, what would a lack of free upgrades hurt? Is it really such a burden to require an Advanced to pass Element 4, or a Tech to pass Element 3, in order to get the next higher grade of license?

Anything that Lllllllooooyyyyydddd supports has to be world class crap.
If you and your ilk are the 'new wave' I want nothing to do with it.

Oh man is that rich. So your saying the 'new hams in the last 17 years' are the only ones that have made advancements in the art and/or provided emergency communications?

What a idiot and a conceited one at that.

Do yourself a favor, go buy a copy of 200 meters and down, then read 50 years of the ARRL. Then come back and say the same thing goof.

Well Carl, our Director . Frank Butler don't even answer e-mails on the subject, and others.

Knowing the gang of 15 is so on high I can only assume they have their noses in the clouds that they can't hear us lowley constituits.

Most people I have talked to, on the air, and on the internet, think the proposal is terrible. Most of which are/were ARRL members. And all to the man saying they are dropping it.

Dream on. The ARRL does not listen. But its members read it loud and clear . Its called money. And to hell with what the members really want.

I disagree, the information required to receive a Tech license is not too complex. I've taught classes and have seen people pass that were "dumber than a box of rocks" as they say. Of course, maybe I'm the world's greatest teacher but that's unlikely. Naturally I teach with enthusiasm and take the time to explain whatever needs further development. And I do explain why they need to know this and discuss real world applications from my own experience so that they can see the usefulness of this knowledge. However if the material were too complex, more of these people would have failed. The few who failed admitted right up front that they had not studied the material.

> body part. Oh, maybe the tongue...

I don't think any body parts are vulgar, Kim. Where did I say that? All
body parts are beautiful, regardless what we call them. I sure as gitout
ain't the Victorian morality police.

If you are talking about my saying you would be better able to explain
the difference, I'm talking about what I read as a minor discrepancy
between your posting:

>>No body parts, nothing about it at all, except what
>>thoughts the three letters t-i-t would have on the male persona.

and:

>>>I was actually in deep thought, as one of them keyed up and said that
>>> my vanity was in my chest so how could "we" come up with a callsign
>>>that would be related to that? HA! I keyed up and simply told
them, >>>that I would get K5TIT if I could.

One part of the post seems to say that no body parts are involved, and
the other says elswise.

I don't really care much about your callsign one way or the other. But
I do recognize that some people do. And you do too, according to:

>>>Oh, yeah. The best part. What DID I have in mind when I chose the
>>>call? The fact that it would get the attention of the male
ego...just >>>as it has.

And Jim and Larry and Dwight and Leo and JJ and Dave and the others are indulging you quite nicely, wouldn't you say?

I would only wish that there were *no* more attention paid to your callsign than mine.

Yeah, you have tried for over 10 frigging years and you are too
lazy and stupid to apply yourself to learn either the code or
the General theory, so you just want it given to you because of
your mental disability.

"Lloyd" is just stirring the shit as usual.

He did this on 14.313 quite often too.

(Hint: wonder why "Lloyd" is in quotes
above, cause my info says it ain't been Lloyd Davies
making these postings all this time over past months. It is
someone else. Someone who has a colorful
past and still likes to stir the shit on 14.313 even today)

Yessir, It's 2004 and it's **still** out there. Guy was up late last
year for the vote on approving his membership application into The
Group (the 43rd & Kingsessing "Group" we're both familair with yes?)
and somebody asked "what license class does he have?" His sponser:
"Uhhh . . Advanced." Then he ducked. Immediate 180dBA noise level from
the Back Benchers, "what the hell is this guy's problem?"

>
>Oh balderdash.

No, it's true. The number of US hams stalled at around a quarter million for
most of the '60s. Then it started to grow again about 1969.

The greatest period of growth was from 1929 to 1935, when the number of US hams
almost tripled in about 5 years.

The second greatest period of growth was from 1951 to 1962, when the number of
US hams increased 2-1/2 times (from about 100K to 250K)

>The 70s brought Dick Bash and multiple guess, and no cw
>sending, and easier tests, and Volunteer Examiners.

Timeline:

1960: FCC eliminates the last "draw a diagram" and essay questions from the writtens and goes to full multiple choice.

1967: Novice becomes two years and loses 2m 'phone, Advanced reopened to new issues.

1968: First set of subband restrictions due to IL

1969: Second set of subband restrictions due to IL

Early 1970s: First Bash books appear.

1977: Code sending test waived

1984: VE system takes over license testing: Q&A pools published.

> Balderdash.

Well, of the items you mentioned, only the Bash books and the end of sending tests occurred in the 1970s.

Since the actual tests used before 1984 are not available, who is to say if they were "harder" or "easier"?

Those of us who took them.

The material today is somewhat more difficult, since it covers a much
broader range of technology than the 1960's stuff.

Okay, how about in the "typical" child rearing age group. How old are you now? 49? How many young, impressionable, children do you have running around your house? Larry is not exactly a young spring chicken either.

> How do you know how old somebody's
> grandchildren or children are, Dwight?

Speculation based on typical child birth trends in this country.

> How old are these "old men"?

Lets see. You're about 49. Larry has to be pushing about 50. I'm 50. Who else?

So you would support the League no matter what they do because they are the "only game in town?"

By that logic, if you were living in Iraq you would have supported Saddam Hussein (or Hitler in Germany).

There comes a time when you have to think and act for yourself. If the League is going to pander to the "give me a free upgrade" crowd, then let that crowd support them. I dropped my membership a few years ago after seeing the League's "re-structuring" proposal.

You can only fight the undesirable changes from the inside. By bailing out, you've let the people with ideas you don't like have free rein. Why didn't you get in there and oppose it? Run for office? Solicit the support of like minded people in a letter writing campaign? Or if you didn't want to do the work, find someone who thinks like you and push them to do the work? Work for ARRL rule changes that wouldn't let the ARRL submit FCC petitions without getting a confirming vote of the membership?

What age group is that? I know people ranging in age from '20s to '50s who are raising small children.

The days when the nests were all empty by the time Mom and Dad hit 50 are long gone, Dwight. And that's in "typical" America.

>How old are you now? 49?

Yup. My birthday is qrz.com.

>How many young, impressionable, children do you have running
>around your house?

Why does that matter? You may have noticed that I don't talk about my domestic situation here.

Suppose, just suppose, that I have 5 children ranging in age from toddlers to teenagers. (I don't, but that's not the point). Would you then say I was right and Kim's call was inappropriate?

>Larry is not exactly a young spring chicken either.

He's a little older. So what? And Larry and I are not the only ones.

People have all kids of family situations these days. Blended families, "second" families, adoptions, people raising or helping to raise their grandchildren, etc. etc. etc.

>> How do you know how old somebody's
>> grandchildren or children are, Dwight?
>

And your source is?

>> How old are these "old men"?

> Lets see. You're about 49. Larry has to be pushing about 50. I'm 50. Who
>else?

Do you consider that to be "old"? I don't. I consider it to be "middle aged".

I run 35-40 minutes every morning. Last week my running log shows 268 minutes
for the week. You know any "old men" who do that?

>> I simply say it's inappropriate for

That's not necessarily true.

A broad range of material covered at a basic level may or may not be as
"difficult" as a narrower range of material covered in more depth.

And how material is tested has a large effect on the perceived difficulty.

IOW, it's possible to write a test on an entire book that is "easier" than a
different test written on just one chapter. Unless the actual tests and methods
are available for comparison, such claimes are TMDAIPORTM

You know, Dwight, I'm not so sure. I don't recall Jim ever making an issue of the issue, except for ommitting the callsign. He's not doing anything except omitting what he finds inappropriate. He isn't calling Kim names, and he Is engaging her in posts here in the group.

And as pointed out, the callsign was indeed chosen so that some people WOULD find it inappropriate.

What would *you* have him do? I'm a little confused about what some people want out of this thread. Jim HAS to use Kim's callsign? Jim has to apologize to Kim for finding her callsign inappropriate? Jim has to have his posts approved for content before posting?

What do you think of her reasoning behind getting that callsign? I don't care one way or the other, aside from an acceptance of it, and for discussion of the callsign to go away, even though that would probably be dissapointing to the owner, who has stated that the callsign was designed to get attention, and which people are giving attention to the callsign in what must be an immensely gratifying amount to her.

Here's your options:

We currently have essentially a 6 license system in place (even though
several licenses are no longer issued). To go from that system
to the one proposed by ARRL leaves three options as I see it:

1. The one-time free upgrade process as put forth by ARRL which takes
nothing away from anyone and immediately gets everyone into the
new 3 license system, or

2. Go to the new system but "grandfather" those on current but no
longer to be issued license classes which takes nothing from anyone but
presents a dual system of licenses, rules and regulations which would
likly exist for decades until those with licenses no longer being issued
as new ended up SK or otherwise dropped from our ranks or,

3. Implement the ARRL 3 licnense system and downgrade some
folks to new Novice (i.e. the Techs) or General (i.e the Advanced).
This last scenario takes away privileges and we all know how well
that went down in the late 60's Incentive Licensing implementation.

To me the answer is clear...and, I suspect so is it also to ARRL which
is why the proposal includes free upgrades.

So changing to Novice, General, Extra shouldn't be a big deal
for the FCC.

> The testing process is already simplified - Tech/General/Extra.

Ditto my last.

> The record keeping is trivial - one field in the database. N/T/P/G/A/E

It's not just record keeping, it is also maintaining a dual
set of rules and regulations that apply to those
"grandfathered" licennses such as Novice and Advanced today...
or are you suggesting they lose their unique privileges (i.e.
be effectively downgraded)?

> It's a needless pushup to combine the classes.

The other side or rules is enforcement. That is likly the more important
issue to the FCC (IMHO).

Hans is correct. The late 50's Tech was the same as General.
Additionally, there were plenty of smaple tests around via AMECO
and other study guides even before Bash.

Huh? Well, I don't make an issue of my breasts, either. And, in addition, I've heard many interviews and giggles wherein Dolly was either alluding to or answering direct questions pertaining to her breasts.

No I support them because they have the horsepower to get things done.
I may not agree with them on all issues, but it is a place to make our
voices heard.
Enough of us writing the League can make a difference.
Squabbling on the NG's and dropping out will accomplish little.
>
> By that logic, if you were living in Iraq you would have supported Saddam

Well you can drop out and scream on the NG's or you can work with and thru
the ARRL to get things done.
I doubt the ARRL reads this NG.

The ARRL has accomplihed much in the interests of Amateur Radio.

> Not only did she get noticed by the people in Key West, but she also
> lost her job as a news anchor back up North.

....and she's also reportedly has open invitation to appear on
the Howard Stern Show, MTV and E! Networks, among others,
with combined financial offers from the same that
would, at the very least, triple her previous earnings as an anchor
at WKBN. If I were her I'd tell WKBN and the prudish a-h's
who deride her to go hit the road. Take the money and run with it
girl - Not bad in the long term from a financial standpoint iffen U ask me!
I give her credit. If you got a body that men like, FLAUNT IT
and SHOW IT OFF BABY(!) and just watch the cash start
rolling in. It's a proven formulae that's worked for centuries.

I mean look at Jessica Haan for example. Before she became a
multi-millionaire she was a typist making $5.00 an hour typing
up letters for the PTL Club in Charlotte. Then one day she gave
Jim Bakker a blo-job in the office and managed to not only crash
one of the biggest televangelism SCAM operations going, but she
now can live comfortably for the rest of her life. (and all for just a
little "fun" with Jimmy in Charlotte...rotflmao) Heck, even Tammy Faye
Messner has wised up, dumped her looser hubby and now she's
doing great with celebrity appearances.

So bunkie, before you go pointing fingers at people, calling them a
"...perfect example(s) of a Northern girl gone wrong", better do
your homework. They are all driving around in 2004 Range Rovers
or Caddy Esclades, while I'll bet your still driving around in a
16yo rattle-trap of a Ford F150 pickup, complete with rusting bed
and no rear tailgate someplace down in Alabama or Mississippi.

That's what I find amusing about these threads.

People want to play "what if" but they aren't describing the situation
where ham radio would be invented today. The way I see it, the real
reason they can imagine amateur radio is because it's been around
all these years. Form follows function. The proponents of this
thread can't really explain why amateur radio would arise today,
without the bias of the past, so really they can't define what
would arise if it did.

CB is a good example of something coming later. "Radio for
everyone" or something like that. Came about around sixty years
after people started playing with radio out of the laboratory.
They could only offer up a small slice of the spectrum, and that
by taking from amateur radio. And while technology did limit
things, realistically the only model was that of amateur radio,
ie direct between two stations. Now admittedly early proponents
of CB often came from amateur radio, but practically as soon
as the service was created, it was referred to in hobby terms.
Not "this is a radio service that you can use to help your hobby"
but a hobby in itself. Look in Popular Electronics from the time,
and you'll see articles by Don Stoner and Tom Kneital to this effect.
(And warnings from the FCC that it ain't a hobby band.) If amateur
radio had not existed, what would CB have been like?

It recently occurred to me that far more people are using radio
for communication than at any point in the past. But instead
of radio, they are seen as telephone technology. Yes, cellphones.
It makes good use of the spectrum, it is something relatively familiar,
and realistically, people are more interested in reliable communication
with those they know.

On one hand, we have people lamenting that amateur radio can't compete
with computers and cellphones today. Yet, then others turn around
and wonder what amateur radio would be like if started today. I can't
really conceive of amateur radio starting today, because I'm not sure what
the purpose would be. And once you start with that premise, free of
knowing that amateur radio has existed all these years, only then can
one begin to imagine what (if anything) would be available to such
a hobby if started today.

I also note that the topic wasn't about "what would the world be like without amateur radio" but "what would amateur radio be like if started today". So yes, one can look back and imagine a history of radio without amateurs, but the two are indeed linked. Take out that history from amateur radio, and I really don't see it starting up today.

Answering a direct question is not making an issue of it. That is addressing other people's issues. Same for alluding to them, she is addressing other people's issues. She is not the one starting it.

You absolutely NAILED it Michael. Amateur radio was started and sustained until post-WWII by tinkerers, experimenters, and technically orientated types. That our service continues to exist today is a miracle, attributable mainly to the efforts of RAC, ARRL, DARC, JARL, IARU, RAE, RSGB, and all the other national societies who so far have convinced the regulators to allow us to continue.

The notion of a "start up" amateur radio service or any personal radio service with such broad gifts of spectrum and freedom to experiment as we enjoy wouldn't gain any traction at all in todays technological environment.

>Hussein (or Hitler in Germany).

Godwin's Law invoked! ;-)

The situations are not comparable at all. SH and AH both had total and absolute control over their respective empires. ARRL doesn't, never had and hopefully never will.

ARRL policy isn't made by "those guys in Newington". It's made by the Board of Directors, who are elected by the membership. Any full member that is sufficiently unhappy with their current director can run for the job and unseat the current holder, or vote to do the same thing. Nonmembers can't. AH and SH didn't have that problem...

"Supporting ARRL" does not mean blind acceptance of everything the BoD proposes. It means being a member, telling them what you think on a regular basis, and pushing for the good stuff and against the bad stuff.

For example, this latest proposal has some good ideas and some bad ones. I've already let the BoD know what I think is good and bad. Now, who should they listen to more - me as a member, or as a nonmember?

If this proposal gets an RM number from FCC, I'll comment, supporting the good ideas and opposing the bad ones. And I'll mention being a member, so FCC knows I'm not just opposing it 'cause it's an ARRL thing.
>
>There comes a time when you have to think and act for yourself.

Sure. Does that mean we don't need a strong national organization for amateur radio? Can we fight battles like BPL as individuals?

And they will, if there's nobody else in the League.

>I dropped my membership a few years ago after
>seeing the League's "re-structuring" proposal.
>
What did you oppose in that proposal? Basically, it had these parts:

1) Reduction to 4 license classes (TGAE)
2) Reduction of code testing (5 wpm G, 12 wpm A and E)
3) Free upgrade to General for Tech Pluses and Novices
4) Techs allowed to use Morse on parts of HF without a test for it.
5) "Better" written tests.

As it turned out, *none* of these points were enacted exactly as proposed. 3), 4) and 5) were totally rejected. 1) and 2) were not only enacted, but FCC went even farther than ARRL requested.

Leaving ARRL because you disagree with some aspects of what the BoD proposes guarantees that the organization will become more homogenized around things you don't agree with, because the opposing viewpoints disappear.

I did write ARRL when I was a member, and also spoke to their reps at club meetings. But they always seemed more interested in justifying the positions the League was committed to than listening to members' ideas.

> > There comes a time when you have to think and act for yourself. If the

> the ARRL to get things done.

I'm not screaming, just stating my opinion. I was a League member for many years. But when they repeatedly take positions on important issues that I think are wrong, why should I continue to support them? If they feel that the long-time hams will always support them no matter what, they will continue to ignore us and take us for granted. Perhaps if enough of the Old Timers drop out, they will get the message.

> I doubt the ARRL reads this NG.

I suspect a few of the ARRL crowd do read these NGs.

> The ARRL has accomplihed much in the interests of Amateur Radio.

Not lately. They've also made some enormous blunders.

>Maybe it wasn't. But are such freebies really a good idea?

It may be a realistic, and pragmatic, idea when considered against the pros and cons:

Cons:

Provides a "free upgrade" to those that haven't explicitly tested for it.

Pros:

Avoids having to wait until the last Advanced class license expires to refarm the Advanced phone bands. Alternatively, avoids opening up the Advanced class phone bands to General-class hams (an effective downgrade in privileges for Advanced, and crowding out DX users with more U.S. hams in those bands) or opening up the Extra class phone bands to Advanced-class hams (which would be a "free upgrade" in all but name). Also avoids having to accommodate a license class (Tech Plus) that isn't even carried in the FCC database anymore, which is a records/ enforcement problem for the FCC, and requires the licensee to keep documentation forever.

>>Rather, it is just one of
>>the unresolved loose ends that was deliberately not tied up until better

>More important, what would a lack of free upgrades hurt? Is it really such a
>burden to require an Advanced to pass Element 4, or a Tech to pass Element 3,
>in order to get the next higher grade of license?

I think the ARRL may be politically shrewder than some would give them credit. They can turn to the reformers and say, "See, we're giving you a both a Novice and General HF-class license that doesn't require Morse Code." To the old-school (and long-time, dues-paying) members they can at least imply, "We recognize that the Morse Code tests you took in the past are valuable, so we are going to reward you with a higher class of license. Then you will always know that you are better than anyone who gets a General or Extra class license under the reduced standards in the future."

Old timers dropping out will not do a thing. There are enough new people
coming in that they won't even notice. Instead we will be left with an even
more unbalanced viewpoint.

>the Back Benchers, "what the hell is this guy's problem?"

Well, what IS his problem?

That group is heavily focused on DX and contesting - particularly DX contesting.
They're "a bit competitive"....

Anything less than an Extra is a big competitive disadvantage in DX contesting. Like not being able to work split. So why doesn't the guy get one? Even if he only works 'phone, all he need do is pass element 4. And he's had almost 4 years.

No, wait, that's not a good reason. Those writtens are really tough. More than 4 years ago, (Jan 19, 2000, to be exact) a certain verbose nonham here said he was going for Extra "right out of the box". But no ham license of any class

yet.
And this nonham says he's a "radio PROFESSIONAL"....

Maybe he should apply to The Group. I'd like to attend that meeting....

How do you know?

>I don't mean malicious intent errors, but the traditional way of IDing and
>such. "N2EY, WA2ISE and the group, 73s."

Was that meant to be an example of how I would operate? Never happened. One of
the first operating rules I learned was that the transmitting station gives
his/her own call last. Learned that long before I was a ham.

What you will hear from me would be

"WA2ISE and the group, this is N2EY"

although usually on sign-off I'll give the call of everyone in the group.
>
>Also things like not tying up a contest op to get his call right as I
>can listen to subsequent other contacts to get his call right.

That's sloppy operating. Suppose the station you just work QSYs or experiences
equipment failure right after your QSO? Then he thinks he worked you and knows
your call, but you don't know his, and so didn't work him. And if the
logcheckers catch it, you can cost him a QSO and maybe even a multiplier.

The time to get the info of a contest station who's running them is during the
QSO or *before*.

>>>when we first got on the air - learning by doing is the best way to learn.
>>Not for everything.
>>
>Well , this ain't rocket science, and botching the first few contacts
>doesn't create a hazardous condition. Not like learning to fly 747s.

The problem is that too many folks want to just wing it rather than taking a little time to learn the right way. Or worse, they think it doesn't matter what the right way is.

73 de Jim, N2EY

extra credit trivia question: where does the term "wing it" come from? Hint: Has nothing to do with aviation.

Not able to work split???????????????? That's nonsense.

Actually it's pretty common (almost universal) that DXpeditions park their transmitter in the Advance or Extra class part of the band and listen in the General segment. On 20, for example, DXpeditions usually park at 14.023 (Extra) and listen up 5 on CW. Similarly on Phone they almost universally transmit at 14.195 (Advanced) and listen up. Similar tactics on other bands (transmit on 3795 and listen just up above 3800). 40-meter phone (there isn't even an Extra phone segment there) is almost 100% done working split.

Although new versus old does cause friction, the balance is still needed.
The new bring fresh enthusiasm and new ideas. The old have the experience
to weigh these ideas and modify them so they will work or to spot ideas that
have been tried in the past and known to fail. We need both old and new.

Go back and read the initial message in the thread and the modifications
in the next couple posts.
If you don't want to play along, DON'T! I gave an inital situation, in
which nothing was given back to amateur radio after WW1 and it died out.
I then added some more qualifications after N2EY asked for them.

<snip>

> I also note that the topic wasn't about "what would the world be
> like without amateur radio" but "what would amateur radio be like

> up today.

Umm, yeah. Sorry to bother you with the thread. DLTDHYOTAOTWO!

Other good reasons for not participating in the thread:

Well, amateur radio didn't go away after WW1, so why are we talking
about this?

Well, things wouldn't be like they are now, so how do we know how they
would be?

Well, what if there were no hypothetical situations?

Well, this is all well and good, but what does it have to do with Morse Code or Kim's callsign?

In one of the first posts, I cam up with the spectrum we would recieve.

Me in an earlier life:

>>> Aww, don't make me define too much Jim! Okay, lets say that in the
>>> rebirth, fueled by concerns for homeland security, that a a loosely
>>> organized group of non-professional communication savvy people that
>>> might be able to respond to disasters or the <like> is made.

>>> Assume that it is decided that this group should have some technical
>>> abilities, so that if need be, they might stand a chance of getting a
>>> station operational under adverse conditions.

>>> The philosophy is that these people would pursue the service as a
>>> hobby, working for enjoyment while honing operational skills.

>>> Let's say that amateurs are allocated some frequencies. I'll assume
>>> that the bands I not will be similar in width to what we have now:

>>> 2 meters
>>> 10 meters
>>> 20 meters
>>> 40 meters - or nearby, away from broadcasting frequencies
>>> 80 meters

>>> The various frequencies are chosen to take advantage of propagation
>>> characteristics.

>>> No UHF or above, no 160 meters.

Seems like a reasonable starting point to me.

Obviously things would be different, there would be plenty of
differences, and the idea was that there might be some discussion of that.

So you and Mr Black just say there wouldn't be any such thing. Thanks
for the input! ;^)

No dual set of rules and regulations. Only difference is a bit of
spectrum on 4 HF bands. And the rules defining those subbands
are already in Part 97.

>or are you suggesting they lose their unique privileges (i.e.
>be effectively downgraded)?

Not at all! Let everyone keep what privs they have now, except
Novices and Techs (see below)

All it means is that there a few kHz on 80, 40 20 and 15 where an
Advanced can't go. How many violations of those rules has FCC
had to enforce in the past 10 years?
>
>> >If it takes a one-shot giveaway to clean up

>That is what ARRL is proposing.
>
Do you think it's a good idea? I don't.

The only "giveaway" that I support is that if a new entry level
license is created (whatever name it is called), that any
privs it has should also apply to existing Novices and Techs
wherever the new license class has privs those classes
don't.

This thread, Michael, was started by a known newsgroup antagonist
who is not, himself, an Amateur Radio licensee...Not even a Novice
Class. His perception of "radio" is strictly from that of a person
looking to make a buck...nothing else.

He often fancies himself the Knowledge Guru since he's very adept
at cut-and-paste.

His favorite technique is to favor you with his presence, but
then when you dare to disagree with him at any level, you are a
"jack-booted thug", an "elitist", a "Nazi", or any number of other
adjectives that he cares to endear Amateurs with. It's especially
worse if you happen to be an Amateur Extra.

> CB is a good example of something coming later. "Radio for

> and you'll see articles by Don Stoner and Tom Kneital to this effect.

> (And warnings from the FCC that it ain't a hobby band.) If amateur
> radio had not existed, what would CB have been like?

CB's "hobby terms" were created by those who found out that the
FCC's rules against "distance" communications were foolhearty against
Mother Nature. The 11 meter allocation was foolish from the start for
a "low-power, personal, short range" communications service. Amateurs
back then told the FCC that the 11 meter band would enjoy the same
propagation that the 10 meter band did, and low-power/long distance
communications were quite common.

The results were predictable. That the FCC would thrown it's
hands up and NOT police that which it had created was not.

> It recently occurred to me that far more people are using radio
> for communication than at any point in the past. But instead
> of radio, they are seen as telephone technology. Yes, cellphones.
> It makes good use of the spectrum, it is something relatively familiar,
> and realistically, people are more interested in reliable communication
> with those they know.

It is only as reliable as the infrastructure that supports it.
No cell tower, no cellphone. An adept hacker could interrupt the
cellphone net. A well-funded group of terrorists or other malcontents
could create a lot of damage without a single bullet or carbomb.

> On one hand, we have people lamenting that amateur radio can't compete
> with computers and cellphones today. Yet, then others turn around
> and wonder what amateur radio would be like if started today. I can't
> really conceive of amateur radio starting today, because I'm not sure what
> the purpose would be. And once you start with that premise, free of
> knowing that amateur radio has existed all these years, only then can
> one begin to imagine what (if anything) would be available to such
> a hobby if started today.

Amateur Radio's present allocations exist, for the most part, as
a legacy of Amateur Radio's history, but is sustained today based upon
it's ability to consistently meet the "basis and purpose" of it's
enabling regulations (at least in the United States), part of which is
public service and emergency communications...Again, a point of fact
that the originator of this thread insists on ignoring or trying to
dismiss as "regulatory language" drafted for the sole purpose of
satisfying some bureaucrat's need to be verbose.

> I also note that the topic wasn't about "what would the world be
> like without amateur radio" but "what would amateur radio be like
> if started today". So yes, one can look back and imagine a history
> of radio without amateurs, but the two are indeed linked. Take out
> that history from amateur radio, and I really don't see it starting
> up today.

Take Amateurs out of the history of radio altogether and radio
today would be a different place. Can you imagine a "radio" today

that was solely base upon commercial influence and control?

The suffix of Kim's call sign spells out a word which is commonly
regarded as a vulgar reference to a woman's breasts. Therefore,

her call sign is very inappropriate for a family-oriented activity such as the amateur radio service.

>> > Kim's callsign is only as vulgar as you,

> Don't be silly. I never said that either.

The "vulgarity" of Kim's call sign would be open to the perceptions of other hams. Riley Hollingsworth said it best when he said that a parent, grandparent, uncle or aunt of a young person who was also a prospective ham would likely be put off by her call, and choose a more appropriate activity for that young person to pursue. Thus, it has the potential to bring the ARS "…one step closer to extinction." I won't presume to speak for Kim, but I, for one, wouldn't want that hanging over my head!

Mike:

Very well said. I have no doubt that Kim chose her callsign with the specific intent of inciting controversy. However, in so doing, she has left herself open to others forming the opinion that she is simply a no-class slag with absolutely no taste, self-respect, or sense of propriety whatsoever. Unfortunately, there is no way that she can possibly dispel that perception unless she does the right thing and changes her call sign to something more appropriate for a family-oriented activity like amateur radio. Only time will tell whether or not she takes this advice to heart, and acts accordingly. However, if she intends to keep her present call sign, then she will always be in the position of having to defend the indefensible. And as long as there are still good, decent people involved in the ARS, her arguments will fall on deaf ears.

That may be typical in your world. However, I haven't met a single 40 or 50 year old recently with a young child. In fact, I only remember meeting one in my entire life - a couple with an adopted child. Whatever the case, I haven't seen it to be commonplace.

> Why does that matter? You may have
> noticed that I don't talk about my
> domestic situation here.

It matters only in the context of the discussion - how many in our age group have young children.

> Suppose, just suppose, that I have 5
> children ranging in age from toddlers to
> teenagers. (I don't, but that's not the
> point). Would you then say I was right
> and Kim's call was inappropriate?

Have those supposed children also talked to Kim on the radio, hearing her callsign and making something out of it? Lets not discuss hypothetical situations, Jim. Anything can be justified or condemned using that.

> And your source is?

Fifty years of life, meeting thousands in that period.

> Do you consider that to be "old"?
> I don't. I consider it to be "middle
> aged".

Forty or fifty is certainly not young.

> Both. I say neither is appropriate.

Appropriate for what? As I said earlier, it's not my job to decide what is appropriate for others in this world, or demand they conform to my ideas of what is appropriate.

> You and Kim keep using the term
> "vukgar" rather than addressing
> whether it's "appropriate".

I've addressed the issue of appropriateness several times.

By omitting the callsign, he made it an issue to be discussed. Were we all supposed to notice it and say nothing?

> What would *you* have him do? I'm
> a little confused about what some
> people want out of this thread. (snip)

I wouldn't "have him do" anything. There has been no demands made of him from me. He's free to do what he wants, just as we're free to comment on what he does.

> What do you think of her reasoning
> behind getting that callsign? (snip)

As I've stated several times, I don't really care what her reasonings were. It's simply not my job to judge Kim. I've told Kim what I think, and that is enough. I don't see any reason to keep repeating myself. And I certainly don't see any reason to repeat myself over and over through a several year period as some in this newsgroup have done.

By whose standards of inappropriateness, Larry? And who made that person the judge of what is appropriate in this radio service? The FCC issued the callsign. As far as I'm concerned, that is the only "judge" that matters in this regard.

There's a lot of negativism in this group about the ARRL proposal.

While not as verbose about it, I agree that this "proposal" was poorly thought out and does not meet any "obvious" need within Amateur Radio. It's a W5YI-ian like effort to create something new for the sake of sales/membership.

My "answer" is a letter to the ARRL suggesting that this was NOT a wise idea and COULD have been made less of a surprise to the Amateur Community by discussing it first. I'll "cc" that letter to my SM.

Other than hurl epithets and insults, is anyone else going to do anything remotely constructive? Or is this pretty much the usual "I-ain't-gonna-do-nuttin-but-whine-like-a-pig" RRAP rhetoric being bantied about?

Y'know...you almost make that sound like you think having this callsign is
some kind of punishment or something. I don't defend my callsign at
all...why would the need arise? On the other hand, it's rather comical
people such as yourself are so compelled to react to a callsign, when your
very actions against other people are quite despicable and rather
embarrassing to the ARS. My callsign *may* be offensive to some people.

However, there's nothing equal to some of the personalities I see displayed in this newsgroup and one can only hope they don't act like that on the air!

> And as long

I know one guy from work that has his granddaughter living with him. Whew!
Man, that would be hell on earth in my opinion! I have raised kids and it
ain't happenin' again--at least not unless there are extremely unusual
circumstances. And, if the parents think they're moving back in...pah!!!!

There's one gal I know, who might even be a couple of years older than me,
who has around a nine year old daughter. And, it was deliberate! But, even
of people who are just acquaintences, that's all I know.

The only thing I'd suggest, but it's far too liberal for Jim, I'm sure, is
that if he has a problem with my callsign and has a "list" with peoples'
amateur radio callsigns in it, then it would have been far more appropriate
(at least in my opinion) to either just leave my submission out of the list
(could have even sent me a private email or posted why--this debate could
have been had for the umpteenth million time under another thread
altogether); or he could have put everyone in the list with just their name.

But, "have" him do? While Jim has found it handy to feel that things are
being *demanded* of him, no one has demanded a thing.

Yeah, and it was probably me (shudder to think), but the issue with the omission of my callsign from the list isn't the issue; the issue is the editing of the post that was made by Jim, even though he edits things from my posts--NOT only my callsign, but words. I see no difference at all. He does. Some others see no difference at all. Some others do. So, what's different about this thread than any other thread in the newsgroup? :o

Depends on how you define "young." When I was 50 my yongest
daughter was only 8. More and more couples today are getting
married later and having kids later. When I was going to "back-to-school"
night for my youngest, some of the other parents could have been
my kids if my wife and I had married and had kids when we were
20. By the same tokenn, I was not the only "senior" parent there.

Speak for yourself. These days 60 isn't
consider old in the same way it was years ago.

Cheers,

Here we go again with the demographics. The ARS is a geriatric service.

Too bad they took the birth date out of the database.

Victim mentality, Dwight! You and Jim get into a wizzing contest, and
Kim gets her amusement by reading the posts.

It's really too bad that you cannot avoid it, but I think Kim is right.
That callsign seems to have some irresistable effect on some people. And
you just can't help it. You don't have the power to resist.

Then it should be a null argument. You should not care why Jim omits
her callsign, and it isn't your job to judge Jim.

Some people might just care what the reasonings are though.

And as for repeating ones self, you shouldn't "have to", but you are.
The power of of that callsign is simply too much to resist.

Depends on where you are at, I guess. Most people I know have postponed
having children until thier mid 30's. That puts them into their 50's
when the kids leave the nest. A few even wait until their 40's, although
they have found out that that doesn't work very well.

Hopefully people don't age too fast where you come from, Dwight, but
I'm 49 and don't feel the least bit old.

I haven't seen it ... and you know I don't choose to operate CW.
YMMV ... but I doubt it's the broad reality.

> >there have always
> >been a few bad apples - MANY of them OTs who passed the 20 wpm
> >Morse test and believe they are some sort of gods.
>
> SOME of them, anyway.
>
> But ALL of them passed the written tests, too.

So? I think it's a given that NO test filters out lids ... no way to fix
that.
Bad behavior is an enforcement issue, not something that can be dealt
with "up front" through licensing requirements.

[snip]

> So tell us what you think of the ARRL proposal, Carl. We already know
about the
> code test, so let's just skip that part.

OK, we agree that NCI will not support keeping Morse tests for ANY class of
license.

> What do you think of:

My *personal* views, NOT necessarily "NCI policy" ...

> 1) the "NewNovice" idea? (easy entry-level exam, limited power, more HF
modes
> and spectrum, less VHF/UHF)

Good idea ... we need to give newcomers a better taste of all of ham radio.
Power
restrictions make sense, and I don't see a big enforcement issue - the
Novice

license had power restrictions and I don't believe that ever presented a
real problem.

> 2) closing Tech to new issues?

OK by me, given a more sensible beginner class license as proposed.

> 3) free upgrades for Techs and Tech Pluses to General?

I was initially against this idea, thinking that taking the additional
written
element should be a requirement. However, I've read Ed Hare's excellent
personal, not ARRL policy comments on this from eham, and find that
they make sense to me - a compelling case for a "one-shot adjustment" to
make things clean in a way that nobody loses anything.

> 4) free upgrades for Advanceds to Extra?

As #3 above ... Ed's argument are pretty persuasive if you think them
through with an open mind. The tests between Tech/General and
Advanced/Extra are *really* not ALL that different ...

> 5) widening of some of the 'phone image subbands?

While I've stated many times that I would not support wholesale
proliferation of SSB/SSTV to the detriment of CW/digital modes,
the "refarming" of the (largely unused) "Novice bands" as proposed,
is modest and I can tolerate it ... if it doesn't happen, the proposal
can be tweaked a bit to allow for the increased access to HF for
the "new Novices".

> I say 1) and 2) are good ideas. The rest are bad ideas.
>
> What say you?

As I said above. Note again, these are my *personal* views after
considering Ed's excellent and persuasive explaination of why he
supports the proposal (of course, Ed knows that I will NOT support
keeping code testing for Extra).

She's *kind* of right, Brian. I'd modify it that the oldsters should be
the helpful type, not the ones spitting bile about how awful or stupid
everyone is anymore. 8^) I really enjoy talking with old timers about
ham radio and radio in general as long as I don't get an earful of vitriol.

> Radio. It's a W5YI-ian like effort to create something new for the
> sake of sales/membership.

I disagree! I think it has some good ideas and some bad ideas.

For example, even before 1991 the Tech was essentially the "entry
level" license - which was never the intent of that license class.
Because the
privileges focus so much on VHF/UHF, the entry path for many new hams
shifted from HF to VHF/UHF. And to many new hams, ham radio became
more
locally-oriented than regionally-, nationally- or
internationally-oriented.

Also, since homebrewing VHF/UHF gear can be more difficult than HF
gear, even more newcomers went with manufactured equipment from Day 1
rather than kit of homebrew gear.

If the newcomer passes Element 1, all he/she gets in additional privs
is a few tiny CW-only slices of three HF ham band, plus some 10 meter
SSB and CW. While lots of great stuff can be done with a simple setup
on 10 when the band is open, it becomes more like a VHF band when the
band isn't open.

On top of all this, the Tech written (Element 2) is full of arcane
stuff like RF exposure calculations, which displaces more basic stuff
that would serve a newcomer better.

The retooling of the old Novice license is an attempt to equalize
HF-VHF-UHF in the entry-level license. And that's a good idea, I
think.
>
> My "answer" is a letter to the ARRL suggesting that this was NOT
> a wise idea and COULD have been made less of a surprise to the Amateur
> Community by discussing it first. I'll "cc" that letter to my SM.

What about your Director and Vice Director - or better yet, the entire
BoD? And let 'em know exactly what's good and bad, and why.
>

> Other than hurl epithets and insults, is anyone else going to do
> anything remotely constructive?

I've already let the BoD know what I think of their proposal. Plus some ideas of my own. In fact, I did that before the BoD meeeting.

If/when the proposal becomes an RM, it'll be comment time......

I'm afraid you *will* need to slap them in order to get their attention.
The BOD doesn't listen to members or hams like me anymore.

If the ARRL leadership had cared about the state of amateur radio and the
quality of its operators, they never would have made the proposals that
they've made over the last 11 years. To them its let us get more morons
licensed so we can get more money in the ole bank account. The ARRL
leadership doesn't care for quality, capable operators. But their plan
will back fire on them and ham radio has and will suffer. When you hand
free licenses to everyone, those people don't appreciate it and probably
won't buy a membership. You always appreciate something more when you
had to work harder to get it and you'll take care of it. But to the ARRL
it's all about money and I'll bet anyone in this group that if they get
their way with their proposal they will offer a 12 dollar discount to new
ham non-members like they did at the last restructuring. "Take a ham
test, and we'll discount new membership on the price of your VEC test
fee!"

Oh well, Nuff said. Most of you don't care anyway. Back to listening to
the lids and CBer type behavior on the bands. 73

Heres something better: From the ARRLs FAG:

"Did ARRL poll its members on this proposal? How was it formulated?

Because ARRL is a representative democracy, ARRL Directors listened to members in their respective divisions while considering these issues. Directors heard from many amateurs in their divisions, and some directors conducted their own surveys. The final proposal represents the Board's best effort at changes to the Amateur Radio licensing structure needed to carry us through the next 10 to 15 years."

Now this makes one wonder how many members did they get Info from. Was it 5, 10, 20, or even 100. The point being before the ARRL puts forth such a proposal, it would be well Advised to determine what a Majority of there MEMBERSHIP was thinking. Untill the ARRL provides actuall figures, I can no longer see where they represent there MEMBERS WISHES.
As for me, with 25 Years as a Member, they will never get 1 more RED PENNY from me for anything.

I haven't seen Ed Hare's argument, so I can't comment on it. If the "adjustment" were some minor clean-up to sweep up the remnants of a long abandoned legacy class and the number of licenses involved was trivial (under 10,000), then I'd have no problem with it.

But we aren't dealing with some trival number, we are dealing with almost 2/3rds of existing licensees.

The message ARRL sends with this proposal is "our General (and Extra) qualifications" are more strenuous than need be. Such a free-pass would establish that all these hundreds of thousands of licensees have been qualified for General (or Extra) all along. At that moment it is established, ipso facto, that the current Technician examination is sufficient for the 'new General' and that the last Advanced examination is sufficient for the 'new Extra'.

Up until now I have never raised the cry of "dumbing down", but such a mass give-away would set a new lower bar for all future qualification levels in the Amateur Radio service, and your position allegedly in support of strenuous technical qualification standards rings hollow indeed.

changes to
| the Amateur Radio licensing structure needed to carry us through the
next 10 to
| 15 years."

I, for one, suggest that popularity polls and beauty contests are not a particularly good method for influencing and guiding the evolution of the Amateur Radio service.

This is particularly true for the National Association for Amateur Radio, which in my not-so-humble-opinion is abdicating its responsibility to show leadership and vision, but has cobbled together an unimaginative proposal lacking both, and copping out by passing it off as "listened to members"

An example of an alternative is at http://tinyurl.com/wce9

Keep in mind also that the vitriolic ones tend to be highly vocal and
noticeable thus giving people the impression that there are a lot of them
when in reality they are only a handful.

Ahh, the confusion lies in that I originated the thread, and then Lenover21 - for reasons unknown - perhaps not to taint himself with replying to a thread I started, then started a new thread that was titled the same, save for the "reprise".

Me neither - can you post a link?

>If the
>"adjustment" were some minor clean-up to sweep up the remnants of a long
>abandoned legacy class and the number of licenses involved was trivial
>(under 10,000), then I'd have no problem with it.

>But we aren't dealing with some trival number, we are dealing with
>almost 2/3rds of existing licensees.

??

Let's see - as of January 15, 2004:

Novice - 32,718
Technician - 259,949
Technician Plus - 62,714
General - 141,443
Advanced - 81,961
Extra - 104,946
Total - 683,731

Total Technicians and Pluses: 322,663

322,663/683,731 = about 47.2% of existing hams getting a free upgrade to General
81,961/683,731 = about 11.9% of existing hams getting a free upgrade to Extra

Total of about 59.1% getting a free upgrade - wow!

>The message ARRL sends with this proposal is "our General (and Extra)
>qualifications" are more strenuous than need be. Such a free-pass would

>establish that all these hundreds of thousands of licensees have been
>qualified for General (or Extra) all along. At that moment it is
>established, ipso facto, that the current Technician examination is
>sufficient for the 'new General' and that the last Advanced examination
>is sufficient for the 'new Extra'.

I agree 100%. And that's not the only message. Such giveaways also say that the tests are so difficult that existing hams cannot be reasonably expected to pass them on their own - but new hams have to!

>Up until now I have never raised the cry of "dumbing down", but such a
>mass give-away would set a new lower bar for all future qualification
>levels in the Amateur Radio service, and your position allegedly in
>support of strenuous technical qualification standards rings hollow
>indeed.

Remember what I was talking about some weeks back, Hans - and Carl asked me to be quiet in case someone got the idea?

There's no good reason I can see to give existing Techs, Tech Pluses and Advanceds a bye on the writtens for the next license class.

Well said, Dee!

There's also the need to recognize that newer is not always better, yet if you never try anyhting different you may never get anything different.

Post 1991.

And to many new hams, ham radio became
> more
> locally-oriented than regionally-, nationally- or
> internationally-oriented.

Heaven forbid an entry level license that's internationally-oriented!

It's been said that Advanced licensees have a "problem" where DX
chasing is concerned.

Short of actual discrimination, it takes at least two people to make a person inferior. The person that sets themselves up as superior, and the other person that accepts their superiority and therefore their own inferiority.

Speaking of QSL cards, I just received one today from the 5 land qsl
burro from an OH station in Finland I worked on September 26, *1981*.
Better late than never I suppose.

Amazing how our concepts of "old" changes as we age. Decades ago, all of us thought 30 was old. Now "old" is something we're not. :-)

Nobody said anything about not being able to resist, Mike. It was an issue (no more than any other issue discussed in this newsgroup), and I simply responded to it.

> Then it should be a null argument. You
> should not care why Jim omits her

You're posting to this thread. Do you find the callsign too much to resist?

So you really don't know, then.

>YMMV ... but I doubt it's the broad reality.

Why? If you don't operate CW, what facts drive that doubt?

Could it be that you don't want to say *anything* about the
mode's advantages over other modes, for fear that doing so could
somehow justify a test?

>So?

So one of the main purposes of the written tests is to insure knowledge of the
rules
and regs.

>I think it's a given that NO test filters out lids ...

I disagree!

No test filters out *all* violators. But well designed testing can help reduce
violations. Otherwise, what's the point of testing, if it doesn't reduce
violations?

>no way to fix that.

>Bad behavior is an enforcement issue, not something that can be dealt
>with "up front" through licensing requirements.

Faulty premise!

While no test can be a perfect "filter", well designed testing
can reduce violations by making sure that those tested know the rules and what
constitutes a violation, and by requiring an "investment" of themselves to join
the amateur community.

Of course enforcement is needed. But even with very low levels of enforcement,
most amateurs follow the rules. Yet in another service (cb), the level of rules
compliance has been historically much lower, even with much higher levels of
enforcement.
>
Or, to put it simply: If tests don't have an effect on rules compliance, why
have tests at all? The "21st Century" paper(NOT the ARRL proposal!)
proposes that the entry-level license test have few or no "radio law"
questions!

>[snip]

>make things clean in a way that nobody loses anything.

Link, please? See also other post in this thread.

Nobody loses anything if Tech, Tech Plus and Advanced stay just as they are, or maybe Techs and Tech Pluses get the sum of their existing privs and those of the "NewNovice", rather than a free upgrade to General.

Consider the practical ramifications of this free upgrade stuff.

Suppose FCC sez yes to the ARRL proposal just as written except for the 5 wpm Extra test. From what you write, it sounds like you'd support that.

And suppose they announced that effective June 1, the new rules would go into effect. This would give time to formulate a new question pool for the NewNovice,
etc. (Or pick some other date if you don't like June 1).

Anyone interested in getting a ham license, or any existing Novices, would have a big incentive to get a Tech between now and May 31, because on June 1 they'd get a freebie upgrade.

And anyone who already has a Tech, Tech Plus or Advanced would have a *disincentive* to upgrade, because they'd be getting a free ride come June 1 anyway.

The first group totals maybe 50,000 people, tops, and probably a lot less. The second group totals over 322,000.
>
>> 4) free upgrades for Advanceds to Extra?
>
>As #3 above ... Ed's argument are pretty persuasive if you think them
>through with an open mind.

Let the readers be the judge of that, please. Perhaps a stronger case can be made for Advanced because it's been closed off for almost 4 years now.

>The tests between Tech/General and
>Advanced/Extra are *really* not ALL that different ...

Then you are arguing that they're not needed. You may not see it that way, but others will. Remember how you wanted me to be quiet on this subject some time back? Now you're unintentionally promoting it!

If someone can get a Tech on May 31 and then get a free upgrade to General on June 1, doesn't that *prove* there's nothing essential in the General test? Why not just dump the General test and use the existing Tech test for General, if someone who only passed Tech can get a free upgrade?
>
>> 5) widening of some of the 'phone image subbands?
>
>While I've stated many times that I would not support wholesale
>proliferation of SSB/SSTV to the detriment of CW/digital modes,

If you choose not to use CW, how do you know they're largely unused?

>is modest and I can tolerate it ... if it doesn't happen, the proposal
>can be tweaked a bit to allow for the increased access to HF for
>the "new Novices".

Part of the whole NewNovice concept is lots more HF access.

The problem with widening the US phone bands is more than just the obvious reduction of CW/digital space. Foreign 'phones tend to hang out below the US 'phone subbands to avoid high power US 'phone QRM (as you know, most countries don't allow as much power as the USA). So widening the US phone bands will push the DX 'phones further into the CW/digital subbands.

>keeping code testing for Extra).
>
Well, I'm sure we;d all like to see that "excellent and persuasive explanation".

Because I sure can't see what the downside is of simply keeping the Advanced as it is, and letting Techs and Tech Pluses have their exisitng privs plus whatever "NewNovices" get.

Well, not amusement...really...Mike. I mean, I wouldn't be in this newsgroup--in general--were it not for the amusement: true. BUT, not amusement specifically about my callsign. In fact, I find the whole issue of debate over my callsign more on the "I can't believe" it side; although I do recognize that, to some people, it really *is* that big a deal. Personally, I feel sorry for those folks.

>
> It's really too bad that you cannot avoid it, but I think Kim is right.
> That callsign seems to have some irresistable effect on some people. And
> you just can't help it. You don't have the power to resist.

I think it's just that, Mike. A power thing. I mean, after all, why the chagrin over a callsign; and all the angst; and all the broohaha were it not for wanting to be miserable about something. Call it stupid of me but, again, I really don't see the huge issue with it and never have.

I enjoy the deliberate ignorance of the reason I got the call...which at its root was purely on a dare from some local hams. Never in a million years did I know of this newsgroup, or even really believe it would get the attention that it has. I mean, think about it: I was a fairly new ham and had no real motivation to be on HF so didn't think of it from that perspective (of using it on a wide distribution basis) and hadn't even heard of any such thing as a "newsgroup" so didn't think of that venue, either. For me, ham radio was a "local" sport and everyone already knew me here, so it wasn't like I was setting out to get a callsign to "make a name" for myself. Good grief, ask Jim Haynie or any Section Leadership what a rabble rouser I've been--long before I ever got a callsign to go along with it! :)

>
> Then it should be a null argument. You should not care why Jim omits
> her callsign, and it isn't your job to judge Jim.
>

For me, it wasn't about "omitting the callsign." It was about editing a post and taking out attributes that could (*could* mind you) be important to that specific post. I pointed that out long ago in this particular debate (under "The Pool" I believe), but Jim, et al, chose to ignore that aspect.

Jim made it about my callsign--at least I think he did. I was all about that he'd been taking my callsign out of posts that *I* had posted. I hadn't even noticed this for a long, long time. But, when it was pointed out, I picked a post and took attributes out of it; more to make an immediate point than anything else.

> Some people might just care what the reasonings are though.
>
> And as for repeating ones self, you shouldn't "have to", but you are.
> The power of of that callsign is simply too much to resist.
>
> - Mike KB3EIA -
>

The reasonings, as stated above, are quite innocent. The plusses (and, yes, I do consider them plusses--I ain't a liar), are incidental amusements that came along afterward. But, look at it this way: just as every other ham who has a "questionable" callsign and is not in this newsgroup therefore does not entertain the flak, so could I have been. But, I found this newsgroup... LOL

Once upon a time you also wrote:

>> I do not, and never will support the elimination or watering down
>> of the written tests. I have stated over and over again that I
>> personally feel they could be made better (where "better" and
>> "more difficult" are not necessarily synonymous ...).

(remember to point out that your quote is about the written tests, not
giving around 60 percent of US Hams a free upgrade) Same difference.

A one time adjustment? That really has to rank as one of the worst
ideas that ever came down the pike!

If the Technicians/now Generals can even be considered to receive the
same privileges as the present Generals, how *Dare* the ARS or FCC even
think of not making it a permanent thing? That isn't even slippery
slope thinking either. The next batch of prospective hams will want to
know why THEY can't get the privileges that the OTHERS got by simply
being in the right place at the right time. What happens then?

And did you know I BELIEVED you when you said that stuff I quoted from you?

Disappointing. 8^(

>being in the right place at the right time. What happens then?

A lot of bad feelings, for one thing. To my knowedge there is no precedent for
this sort of thing.

And the primary question - what is the problem without the freebies?

That's one. There are others:

- Allowing a free upgrade is proof that the material in the test which is not taken
is not necessary for the privileges.

- Amateurs who miss the one time upgrade have to take more tests than those who didn't. How do we justify that?

- Decreased reason for more than half of all hams to upgrade by testing.
>
>Pros:
>
>Avoids having to wait until the last Advanced class license expires to
>refarm the Advanced phone bands.

Why does that have to be done at all?

>enforcement problem for the FCC, and requires the licensee to keep
>documentation forever.

If the current rules are left alone, all Tech Pluses will be Techs in six years, two months and 20 days or so.

Why not just give all the existing Techs, Tech Pluses and Novices the "NewNovice" privs, in addition to their existing privileges? The database doesn't need to change at all.

> this sort of thing.

And how! I would not feel any resentment toward hams that came on board
sans Morse code testing. After all they were just taking the tests that
were taken when they upgraded.

But to have the equivalent of a General with just the technician test?
For almost 60 percent of Hams to get the free upgrade?

I make this suggestion in dead seriousness. ARRL needs to consult with
a licensed psychologist stat, if not put one on staff retainer. Perhaps
he or she could explain why this is such a stupid idea.

> And the primary question - what is the problem without the freebies?

How about this scenario:

ARRL is scared witless about the BPL problem. Their (somewhat
necessary) paranoia about these things caused someone at HQ to muse
"yaknow, if all these Technicians were Generals, we could show up at the
FCC with much more impressive numbers of the Hams that would be
negatively impacted by BPL or other spectrum threats". Right now, they
don't have much HF access, so giving it to them allows us to jack those
numbers up by a lot!" It bounces off the restructuring committee, and
viola! A plan that not only P****s off those who came before, but also
those who will come afterward.

It will also make an incredibly good case for - dare I say it?
indisputable running numbing dumbing down of the ARS.

- Mike KB3EIA -

1754. Do we really need a new Novice class?

Newsgroup: rec.radio.amateur.policy
Date: 2004-01-27 03:30:51 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0401261930.52c04c71@posting.google.com>
Source record: 86530

First, I must praise the ARRL directors for proposing a compromise. No matter what they proposed, they were destined to be buried in hatemail.

Having said this, I think the proposal didn't fix all that was broken (read: Morse Code exam requirement) and also fixed things that didn't need to be fixed.

As far as I can tell, people want the Novice license back so entry-level hams can have some HF privileges. But the proposal would REDUCE the privileges of current Novices, which I don't think is fair (even if 99.9% of Novices are inactive). I think the Novice privileges should be left alone. And I don't see a need for the FCC to issue new Novice licenses again given the fact that most new hams chose the No-Code Tech license over the Novice license during the period when both were available.

I have a better idea: Why not just give all Technicians (include the No-Coders) Tech Plus privileges? This gives the entry-level license class some HF privileges. Like most of you, I disagree with the free upgrade to General. Expanding Novice/Tech Plus HF privileges seems to me to be a better idea. And if the current Novices are such a burden, why not just upgrade them to Tech Plus?

I applaud the ARRL for reducing the Morse Code testing requirement further in the proposal, but it could have proposed a complete elimination. The reasons for eliminating the Morse Code requirement for the General license apply for the Amateur Extra license as well. There's also a practical reason to fully eliminate the Morse Code exam - the need to keep track of which current Technicians and new Generals passed the 5 wpm exam and which did not.

In short, I think that the current license system is mostly OK. The only change I think is necessary is the elimination of the Morse Code testing requirement.

Jason Hsu, AG4DG
usenet AAAAATTTTT jasonhsu.com

1755. Why did the FCC merge the Tech and Tech Plus classes in 2000?

Newsgroup: rec.radio.amateur.policy
Date: 2004-01-27 03:35:37 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0401261935.2626e6b0@posting.google.com>
Source record: 86531

As a result of the restructuring, there are several different versions of Technician license:
1. The old Tech Plus licensees: Unlike the No-Code Technicians, they have limited operating privileges on HF and do not need to take the 5 wpm exam again to upgrade to General.
2. Old No-Code Techs: They have no HF privileges and must take the 5 wpm exam to upgrade to General.
3. New No-Code Techs: See above.
4. New Technicians with the 5 wpm CSCE within the past year: They are treated the same as the old Tech Plus licensees.
5. New Technicians with the 5 wpm CSCE more than a year old: They have Tech Plus Operating privileges but must pass the 5 wpm exam again to upgrade to General due to the expired CSCE.

Why did the FCC do this? It's a cause for confusion for VEs and prospective upgraders, and it makes it needlessly more difficult to enforce the rules when some Technicians have HF operating privileges and some do not and when some Technicians need to take the 5 wpm exam again to upgrade while some do not. Although I think the restructuring of 2000 was long overdue, I think merging the No-Code Tech and Tech Plus licenses was a boneheaded move. Either the distinction should have continued, or all Technicians should have been given an automatic upgrade to Tech Plus.

The only explanation I can think of is that the FCC intended to completely eliminate the 5 wpm exam requirement and thus make the distinctions between each of the 5 versions of Technician license a moot point.

Here we go again! Damn it Jim, that is patently false and you know that it is, yet you keep dragging it out as a fact. Allowing a free upgrade isn't "proof" of anything except that a free-pass was given, sort of like a day of amnesty when all overdue library books can be returned without fees. Yes, it's a really bad idea, but it doesn't disprove the need for proper qualification examinations. Go join Carl Stevenson and Ed Hare in the NTI sign-up queue. (I'd mention them by call sign, but I wouldn't want to risk compromising your "standards".)

?????????? REDUCE ????????????

Maybe I missed something, but to my mind the proposed new priviledges
for the Novice class seem decidedly more generous than the current set.

Several new bands; broader segments on CW; new phone and data privileges
on bands where they currently have only Morse privileges.

If the Technicians are given the same privileges as a General, does it not mean that a Technician is capable of those privileges after taking the Technician test? If so then why should any further testing besides Technician level be given for future General class licensees at the old level. All that is needed is a Technician level test.

Amnesty? OY!

When I read about QSL'ing (I think in the Now You're Talking Book) before I got my ticket, the idea sounded grand. But, I quickly became disinterested when the reality of how long it takes, coupled with the added aggravation of having a bureau, etc. I understand the idea of handling costs, etc. But, it's just too much aggravation for me. There's supposedly some QSL cards waiting for me somewhere up in OK, I think at a QSL Manager or something. Someone posted the information here in the newsgroup one time. They'd probably mean nothing to me any more because I wouldn't even remember the contact! LOL

But, for DXers and paper chasers, it's probably a nicely organized rigmarole. Do you mind the wait, Bert? You must be "into" DXing and contesting, eh?

That they are trying to keep things moving from their
perspective, perhaps. But I don't think this requires a whole lot of
rethinking nor does it require any complex bandplanning.

There's good stuff here, Jim, but I'm going to cut to the chase.

> On top of all this, the Tech written (Element 2) is full of arcane
> stuff like RF exposure calculations, which displaces more basic stuff
> that would serve a newcomer better.

I don't think that much of what is "written" is pertinent even if
it were "written" in the next 2 hours. As long as the question pools
are open and the "newcomer" can pick up a verbatim "Q&A study guide",
the tests are relatively irrelevant.

Yes, some "learning" will occur just from reading the question
over and over, but to what legitimate application can THAT kind of
learning be applied?

Repeat after me: "Lopressor is a beta blocker administerd SIVP
for the control of hypertension and AFIB with IVR."

Got that? Now, WHAT is a beta blocker? What was the underlying
etiology of the hypertension or the atrial fibrillation that produced
the irregular ventricular response?

> > My "answer" is a letter to the ARRL suggesting that this was NOT

> BoD? And let 'em know exactly what's good and bad, and why.

Perhaps, Jim, but my take is that the FCC has expressed more than
it's fair share of frustration with the numerous licening strategies
that have been offered, all suggesting that "this one" will be the one
to open the flood gates of new licensees.

Each has produced a momentary road bump followed by a rapid
return to a steady-if-unimpressive growth rate.

> If/when the proposal becomes an RM, it'll be comment time......

Ditto.

Hope you're keeping warm Jim! It's embarrassing here...I spent
most of the evening with the back door open to let a cool drizzling
breeze pass through the house.

On the whole I agree with what you propose. However, on 20-10m it gives more phone than the IARU bandplan, and on 40 it gives less. It would make more sense if phone were allowed exactly where the IARU bandplan puts it.

>
Some Novice privileges have been reduced. I just think the ARRL
should avoid downgrading privileges. Current Novices would have their
power limits cut and lose 23 cm. Modestly upgrading privileges is OK,
maintaining the same privileges is OK, but downgrading privileges
should be avoided.

I realize the rationale for reducing power limits for new Novices is
to avoid the need for RF safety questions on the new Novice exam. I
think it would be better to have RF safety questions in the exam and
NOT downgrade any Novice privileges. An exam with RF safety questions
shouldn't be that much harder than one without them, and the RF safety
questions have nothing close to the unilateral power of the Morse Code
exam.

If consolidating the license classes into 3 is a concern, I think it
would be better to just upgrade all Novices and Technicians to Tech
Plus than to upgrade Technicians to General.

Agreed. I've noticed that Hans seems to get a nasty case of cabin fever
around this time of year, and becomes a hammer in search of nails. It's
his only tool, and *everything* looks like a nail.

We have maybe 8 inches on the ground. Roads are slippery enough that I
keep the Jeep in 4WD full time. It isn't too bad, but it isn't a pretty
kind of snow. Yesterday and today most of the schools in the center of
the state are closed. But they are all wusses! 8^)

The gunnery nurse seems to think that his PC is infested with an
A.I. virus that masquerades as all kinds of different communicators.
It's getting so that he can't tell reality from his internal fantasy.

Excuse me, I'm going off to practice my K0HB, Billy Beeper, and
Leo posting. :-)

>You absolutely NAILED it Michael. Amateur radio was started and
>sustained until post-WWII by tinkerers, experimenters, and technically
>orientated types.

"Technically oriented," not 'orientated.'

They were using information on radio hardware theory that was being refined and detailed by commercial, government, and military radio users. Principally that was in the period from 1900 to the mid-1930s. Lots and lots of non-amateurs were very busy trying to get a slice of what appeared to be a lucrative new technology. A similar happening started in personal computing in the late 1970s, many amateurs involved, until the USERS and the makers got going to make the personal computer a tool for everyday life and work.

For a more widened view of early radio development, the text history by Hugh G. J. Aitken, "The Continuous Wave, Technology and American Radio 1900-1932," Princeton University Press 1985 is recommended as a source. The first "driver" of radio technology was the maritime world. Maritime radio was considered indespensible for ocean vessels, giving them something they had never had before - communications beyond the horizon.

Some amateurs, restricted to sources from a CT publisher, will insist that amateurs "discovered short waves" 83 years ago. Not quite since the Marconi Company first noted the long leaps in "short wave" paths 84 years ago. Some 82 years ago a commercial communications carrier was already trying out HF on several wavelengths ("down" to 30 meters) to improve daylight radio transmission paths. Commercial concerns, especially broadcasting, were the drivers of radio technology after WW1.. Those who do 24/7 radio communications are more likely to notice effects than amateurs limited to a few hours each day.

The commercial-industrial-governmental-military users of radio were already migrating upwards iin frequency from the late 1930s and especially so after WW2. However, the "tinkerers,

experimenters, and technically" oriented folks have ALWAYS existed and grew more numerous after the "military surplus" years just following WW2. That is most notable in NON-ham electronics activities such as robotics, personal computing, music systems, security-alarm-control applications. Radio control of model aircraft and other vehicles is a big market (AMA has as many or slightly more members than ARRL). AMA got a large block of frequencies at 72 MHz just for R/C all by itself.

Despite the grousing, bitching, and whining of "experimenters" unable to get the exact parts for copying a magazine article project from Radio Shack, electronic parts remain on the market, as numerous as they were in 1947 or 1967 (actually more so) but are not solely concerned with the so-called alalog radio field. Even the giant and growing Fry's Electronics chain carries a whole aisle of packaged components from capacitors to circuit board blanks. Modern day electronics "experimenters" have gone well beyond radio in the scope of their fun.

While some hams look with distaste, disgust, and some with pejorations of evil upon "CB," the 27 MHz kind of personal communications opened in 1958 (that's a mere 46 years ago) WITHOUT the amateurs and expanded enormously when the offshore designs and manufacturings took off.

Offshore design and manufacture facilities have greatly aided the availability of everything from parts to finished systems at relatively low cost. That allowed the hobbyists to pursue all kinds of areas of electronics design and construction in home workshops.

Had amateur radio remained cut off after WW1, there would have been NO ARRL to lobby or do anything. The club clocks would have been reset to the competition for national memberships of the pre-1914 times...telegrams and telegraphy messages would still have gotten through in the commercial-government world of radio. Broadcasting would have expanded enormously after 1920 despite amateur activities along with receiver development and all the peripheral electronics around "radio" (everything from wireless mikes to radio-coupled phonographs and eventually to stereo-binaural sound and magnetic recording for "hi-fi" sound). HF would still have been a pre-WW2 hotbed of commercial-government communicatios carriers, everything from 4 voice channel width SSB to single-channel RTTY. By 1938 some police departments had been "experimenting" (trying out) mobile FM, with success. Once rocketry had become relatively practical after WW2, the commercial satellite communications "birds" would have existed (Telstar was a US telephone company project). Now the equatorial geosynchrous orbit is FILLED with comm sats (about every 3 degrees or so) and the "long-distance" radio communications goes over them rather than old HF (if not over fiber-optics cables or microwave radio relay having even more bandwidth).

>That our service continues to exist today is a
>miracle, attributable mainly to the efforts of RAC, ARRL, DARC, JARL,
>IARU, RAE, RSGB, and all the other national societies who so far have
>convinced the regulators to allow us to continue.

Ah, but in this hypothetical alternate reality, there would be NO such organizations. They MIGHT form again but there is NOTHING to guarantee that they would be even close to doing what they do now. Evolution of amateur radio organizations happened just as it did to every other radio service...some would survive, others would not.

The "selling job" of these FUTURE clubs (not really "societies") would be difficult since they would have NO "track record" to fall back on, no mythical claims of being necessary in any emergency, or any of the legends they loved to trot out. It would be back to Square One for most of them except for the first one, the Radio Club of America.

Remember that the ARRL began as a local CT radio club with the ideal of serving as a freebie message-forwarding service. In today's world it would be a Hacker club "hacking" on Western Union's and other telegram suppliers' high telegram fees. All the high-sounding PR BS of today hadn't happened and all the ARRL would have to show for itself in this new alternate reality is some nebulous, rationalized message relay Hacking. Not a good thing to expand upon and not something to convince regulators that they should allocate bands and things to amateurs. That could be done in a different way.

But, without the "tradition" and "glory of service" (or whatever) that has been the propaganda tool of the membership organizations' spoon-feeding of What To Do, What To Say, How To Act, the present-day orgs couldn't do it the same way they have for years.

In this alternate reality, the word "ham" might never have caught on. It was a pejorative given by professional telegraphers to amateurs originally (from ARRL's own etymological definition). "Amateur" is not a bad thing since there are many and varied amateur activities of all kinds, especially in sports. "Ham" as a prefix has never been a good label, especially in show business.

My speculation is that HF would definitely be open for allocation for recreational activity. The commercial and government users of HF have vacated much of it, use it primarily for time-frequency standards, broadcasting, much less communications than two to three decades ago. If R/C models can get a block of lower VHF frequencies, I'm sure that amateur radio could get some HF bands for fun and games.

>The notion of a "start up" amateur radio service or any personal radio
>service with such broad gifts of spectrum and freedom to experiment as
>we enjoy wouldn't gain any traction at all in todays technological
>environment.

A quaint notion based almost entirely on the past present reality happenings...not to mention several boatloads of mythology and

legend PR that is more puffery than substance. Sorry, not bought.

There is absolutely NOTHING "wrong" with getting a block of frequencies just for recreation. R/C did it and modelers have NEVER claimed anything close to aiding homeland security or being of some vital and important aid in times of emergency.

27 MHz CB is already 46 years old. FRS and GMRS exists today as do almost innumerable "cordless" and "wireless" low power RF communications devices of many purposes, from VHF on up to C Band (5 GHz) in microwaves. I say there would definitely be a lot of personal communications "radios" in this alternate reality, regardless of amateur claims (in this universe) of pioneering them.

But, in this alternate reality, there might be some bitter and prolonged fighting in urban and semi-urban residential areas as amateur radio folks tried to put up large, ugly wire and tubing structures (beautiful to them, maybe, but a decided eyesore to non-radio neighbors).

Amateur radio, if it came to be, would have a decidedly different scope of activities in this alternate universe. It would BEGIN to evolve, probably to something else, since there was no "tradition" to "preserve" nor any set of 1930s Standards and Practices to uphold 7 decades later. Radio amateurism would begin ANEW.

So far, we have unnamed Back Bencher club member(s) and Jim/N2EY
setting themselves up as superior.

I wonder if the inferior amateur was permitted to join the club?

Only Brian Kelly can answer that question.

>That's one. There are others:

>- Allowing a free upgrade is proof that the material in the test which is not
>taken is not necessary for the privileges.

To quote from the ARRL's FAQ on their proposal:

http://www.arrl.org/news/restructuring2/faq.html

"The fact is that the examination bar has never been at a uniform height
over ham radio's nearly 100-year history."

Were you also opposed to giving pre-1917 hams a waiver for the 20 WPM
code test?

>- Amateurs who miss the one time upgrade have to take more tests than those
>who didn't. How do we justify that?

It's called "grandfathering," which is done in more regulatory contexts
than can possibly be named here. Due to the need for certainty in the
law, it is nearly always based on hard cutoff dates. Technologies,
practices, and people change over the very long timeline that laws and
regulations are required to cover. It is not possible to predict the
future with certainty, so laws and regulations must change to reflect
current knowledge. It is also impractical for society to retest,
recertify, or revalidate every existing entity against current
requirements.

The web site for Malvern Instrumentation gives a good definition of
grandfathering in a technical context:

"Grandfathering is the practice of claiming exemption of older systems
from validation regulations and requirements on the basis that these
systems have proved their reliability by adoption for a long period of
time by a large user base."

Grandfathering in the context of ham radio recognizes that existing hams have not only passed the tests in effect at the time, sometimes topics not covered presently (Morse code, drawing circuit diagrams, etc.), but have also gained experience beyond their initial exam topics. It is a fair, and pragmatic, distinction between existing hams and entry-level ones. Quoting again from the FAQ document:

"Passing any amateur examination does not magically result in a good operator. It's just the key to the kingdom, so to speak. Experience and good mentoring create skillful and knowledgeable operators, not the relative difficulty or ease of the test."

You might argue that not every existing ham has obtained the same degree of experience, or even a minimum necessary level of experience to be given a free upgrade. That would be true, but ultimately would be self-limiting, as experience would correlate with participation. An inactive ham using no privileges today would be using no more privileges if the FCC gave him a free upgrade tomorrow. Free upgrades are not a perfect solution, ideal in all cases, but are a good solution overall.

>- Decreased reason for more than half of all hams to upgrade by testing.

No proposal is perfect. Weigh this one against the pros.

>>
>>Pros:
>>
>>Avoids having to wait until the last Advanced class license expires to
>>refarm the Advanced phone bands.

>Why does that have to be done at all?

So, are you advocating not refarming the Advanced phone bands even *after* the last Advanced class license expires? Yeah, that's a semantic nit-pick over what you wrote above, but then so is "You mean the BoD. I'm the ARRL too, remember?" that you wrote below.

If you do agree that the Advanced phone bands should be refarmed at some point in the future, at what point would you have it done? Would you leave it to Extras, give it to Generals, or would you otherwise split it up in some way?

>>Alternatively, avoids opening up the
>>Advanced class phone bands to General-class hams (an effective downgrade
>>in privileges for Advanced, and crowding out DX users with more
>>U.S. hams in those bands) or opening up the Extra class phone bands to
>>Advanced-class hams (which would be a "free upgrade" in all but name).

>Again, why not just leave those subbands as they are now?

In this day and age, regulatory agencies seem more eager to simplify regulations. Removing regulations that are obsolete, or cover too small an intended audience to be justified on a cost basis, is likely a top priority for such agencies. Again, what is your timeline for change? Decades in the future, or never?

>>Also avoids having to accommodate a license class (Tech Plus) that isn't
>>even carried in the FCC database anymore, which is a records/
>>enforcement problem for the FCC, and requires the licensee to keep
>>documentation forever.

>If the current rules are left alone, all Tech Pluses will be Techs in six
>years, two months and 20 days or so.

If by saying, "If the current rules are left alone..." you really meant leaving alone everything *except* the 5 WPM Morse code requirement (which would be eliminated for these General and below under the ARRL proposal), then, and only then, Technician-class hams will assume the HF privileges of Technician-Plus. That's still a long time in FCC enforcement (and VEC administration) years. Even if you argue that FCC action on further restructuring will take most of that six years anyway, there are still all those Novice and Advanced class licenses that will likely exist in the database for decades to come.

>Why not just give all the existing Techs, Tech Pluses and Novices the
>"NewNovice" privs, in addition to their existing privileges? The database
>doesn't need to change at all.

Did you notice that Novices actually lose privileges? See the FAQ document above for more details. In particular, power limits are lowered from 200 Watts PEP to 100 Watts PEP on HF bands except for 10 meters, and 50 Watts PEP on 10 meters. From the FAQ:

"The reason behind the change in Novice power limits is to avoid having to examine entry-level applicants about how to evaluate amateur stations for RF safety. "

I'm sure that you would argue that Technicians should retain their power limits (1500 Watts PEP) on 6 meters and up, and I would agree, but what about HF? Should Technicians lose privileges on those bands, by having their power limits lowered (from 200 Watts PEP), or should there be separate power limits for Novice and Technician on HF? This is starting to get more complicated than before.

>>

>You mean the BoD. I'm the ARRL too, remember?

Yes, I meant the governance of the ARRL when I used the shorthand "ARRL"
in the context of offering an opinion on a BoD decision. Only they can
establish ARRL official policy and petition the FCC in the name of the
ARRL. Who else did you think I meant?

>How much of the ARRL proposal in 1998 got enacted?

You will need more than a rhetorical question to make an argument here.
Instead, why don't you just come right out and say, for the benefit of
the audience, which items in the ARRL proposal got enacted, and which
ones didn't? And, of those that didn't get enacted, which ones you
think have already been given a final "no" answer?

>>They can turn to the reformers and say, "See, we're giving you
>>a both a Novice and General HF-class license that doesn't require Morse
>>Code." To the old-school (and long-time, dues-paying) members they can
>>at least imply, "We recognize that the Morse Code tests you took in the
>>past are valuable, so we are going to reward you with a higher class of
>>license. Then you will always know that you are better than anyone who
>>gets a General or Extra class license under the reduced standards in the
>>future."

>Avoids the subject of why free upgrades are needed.

But does address the subject of why they may be politically desirable,
not only by leading to simplified FCC regulations, but also resulting
in a more harmonious and productive amateur radio in the future by
addressing most of the concerns of most factions.

>I say they're not.

So you've said. I'm sure that you will also say this to your
representatives within the ARRL and comment on any future FCC NPRM on
the subject. I will, too. For the record, I'm not in complete
agreement with the ARRL proposal, either. I don't see the regulatory
justification for the retention of 5 WPM Morse code for Extra, and I
remain skeptical that a Novice license (even a restructured one) is
viable today.

>wpm exam again to upgrade to General.
>
And there's two versions of this group: The very old Tech plus who
passed the general
written and 5 WPM (I was one of these), and a newer post early 1987 tech
plus, who took
an easier written and the 5wpm. The first group can get their general
by only a paperwork
submission (they have to prove that they got their tech plus before
1987), but the newer
tech plusers need to take the general written. While I went for my
paperwork general
upgrade I did the extra writtens (at the time I had advanced 4A and
extra 4B written CSCEs)
and became an "extra lite". Partly to get my "very old tech plus" credit
"locked in" in the
FCC data base, and to get more priv's.

When they came out with incentive licensing, there was a vocal minority complaining. When they came out with the No code tech license there was a vocal minority complaining. Now they are doing away with most of the CW requirement and there is a vocal minority complaining.

WAyyyy back there used to be the class separation and then they did away with it to the point where the General class had full privileges. Then incentive licensing, then the new structure with code free techs on VHF, then they lowered the CW speed and now they are doing away with most of the CW requirements which are there due to international agreements.

"To me" it matters little whether they make the requirements tech heavy, procedure heavy, or require CW. It has little to do with the character of those coming into the service.

Each change has brought out the "gloom and doom" element proclaiming this will be the straw that broke the camel's back and the end of Amateur Radio.

Maybe in addition to the technology and procedure testing we should run a test on character traits? <:-)) If we had been doing such there would be a number of current hams who would have failed.

I have gone the whole route and yes, I passed 20 wpm to get my license, but I don't see that need be a requirement for future applicants.

It really doesn't matter how we test, there is always going to be a mix of character traits and groups who oppose the way each other operate. There will also be a small percent who will not be satisfied no mater what is done.

> > 28000 to 29700 any mode

let the modes fight it out and the 'good amateur practice' with voluntary
band plans work it out. they are much easier to adjust than fcc dictated
mode divisions of the bands.

> As far as I can tell, people want the Novice license back so
> entry-level hams can have some HF privileges.

NO! It has very little to do with HF! It is all about OLD FARTS
wanting to keep Ham Radio an "Old Boy's Club".

> But the proposal would
> REDUCE the privileges of current Novices, which I don't think is fair
> (even if 99.9% of Novices are inactive). I think the Novice
> privileges should be left alone. And I don't see a need for the FCC
> to issue new Novice licenses again given the fact that most new hams
> chose the No-Code Tech license over the Novice license during the
> period when both were available.

Your logic is obviously flawed. These Techs chose NoCode, because
they didn't want to do the code! How many young people (and other
beginners) WOULD have chosen NoCode Novice, IF it had been available?
You don't know (NOBODY KNOWS!), but I can assure you, it would have
been LOTS!

Look; Here is the problem in a nutshell:

When the Novice license was eliminated during the last restructuring,
it actually made it harder for young people to get into the
Service/hobby. The ARRL proposal brings back the entry-level testing
requirements; albiet, without the Morse Code requirement (which is
totally out-of-date, anyway).

With the advent and growth of the Internet, Cell Phones,
FRS/GMRS/MURS, etc., Ham radio privileges and requirements have become
totally out of whack with the times. This proposal brings things up
to date for the 21st Century, and gives the young citizens of this
country back the entry-level license.

It is the RIGHT THING TO DO.

1791. My alternative to upgrading all Technicians to General

Newsgroup: rec.radio.amateur.policy
Date: 2004-01-27 21:04:46 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0401271304.2fceffa6@posting.google.com>
Source record: 86467

What do you think of my idea? (I'm taking bets on how many people flame my idea.) While I applaud the ARRL for proposing a compromise, I think the proposal goes too far in some areas and not far enough in others. My proposal:
1. Keep the Technician class. No-Code Technicians get free upgrades to Tech Plus privileges instead of General privileges.
2. Eliminate the 5 wpm exam completely. The General license would STILL require the General written exam but NOT the Morse Code exam. The Amateur Extra license would STILL require the Amateur Extra written exam but not the Morse Code exam. There is a pragmatic as well as philosophical reason to eliminate the Morse Code testing requirement: no more need to keep track of which Technicians (and new Generals) passed the 5 wpm exam and which ones did not. (Yes, this is essentially what No Code International proposes.)
3. Keep the current phone bands in place as an incentive to use and develop narrowband modes like CW, PSK-31, etc.
4. If keeping Advanced licenses in the database is too much work, then give Advanced licensees a free upgrade to Amateur Extra.
5. Do NOT reduce Novice privileges. (The ARRL proposal reduces their allowed power output and eliminates their 23 cm privileges.) If keeping Novice licenses in the database is too much work for the FCC, then give all Novices a free upgrade to my proposed new Technician class (Tech Plus).
6. If the entry-level license has too few HF privileges, then expand HF privileges for the new Technician class rather than give all Technicians a free upgrade to General.

I'm surprised the ARRL didn't propose something like this, as it would be simpler. (Or the ARRL could have proposed the exact same thing I propose here but retain the 5 wpm exam for the Amateur Extra class as a compromise.) I think my idea would do more to simplify the FCC's work and be just a continuation of the 2000 restructuring. I'm not sure if the FCC will like the ARRL's proposal due to the added complications. Remember that the restructuring of 2000 kept the same basic license structure in place - the only real changes were eliminating the 13 wpm and 20 wpm exams, keeping the 5 classes in place, and stopping the issuance of new Novice, Tech Plus, and Advanced licenses. Note that my proposal keeps the same basic license structure in place as well. The main change is the elimination of the 5 wpm exam. I believe that the current license system is basically OK. I can't think of a system that would be that much better WITHOUT imposing substantial burdens on the FCC, ARRL, VEs, applicants, etc.

Just discovered that? :-)

The biggest moneymaker at the ARRL is their Publishing. They break
even with QST but the gold is in the numerous books they have for
sale (shipping charges extra if ordered from Newington but same
prices, no shipping charges if bought over the counter at HRO).

Publishing pays nearly all the bills at ARRL, including all the so-called
membership services that are supposed to be so wonderful and
"cost nothing" to members...renting of banquet rooms for the BoD
get-togethers (and probably travel expenses, too?)...maintenance of
W1AW and the museum...and the legal and lobbying fees in DC.

Membership fees don't go for much directly. That pays for the
"fulfillment services" (mailing lists, printing, distribution of QST) with
the rest of it spread throughout Hq; membership magazine QST
gets its income from advertising charges...just like the other
independent magazines of interest to amateurs.

The 2002 Federal Tax Returns for ARRL showed an operating
budget of around $12 million. Given only 170 thousand or so
memberships, that multiplied by annual dues isn't going to hit any
$12 million.

ARRL stays alive by BEING a business. Their self-promotion is a
necessary thing. Unfortunately, many members don't see that,
preferring the delusion of some altruistic, noble, kind, and good
organization "solely for members." <shrug>

OK, but don't call me Len!

You have me on that one - I have always taken for granted that the
term came from the appearance of the 'wing nut' itself - that is, the
two projections allowing it to be finger tightened look kinda like
wings.

Where did it come from?

I have no idea. I was in the Air Force, and the grunts always
referred to us as wingnuts. So I thought you might know.

I should ask Dee. She knows everything and she's always right.

Len, wasn't it Mike Deignan that used to beat the "publishing" drum?

Don't forget the advertising sales in all those publications, and of course, the endowment funds.

>were. It's simply not my job to judge Kim.

Dwight:

Fine, then leave it up to me. I am an intelligent, educated, mature and responsible person, and thus highly qualified to make judgements on things like Kim's callsign -- and based on the evidence provided thereby, her character.

>I've told Kim what I think, and
>that is enough. I don't see any reason to keep repeating myself. And I
>certainly don't see any reason to repeat myself over and over through a
>several year period as some in this newsgroup have done.

The main purpose of the "repetition" is to keep the issue on the "front burner" as it were. Kim has acted irresponsibly by choosing a call sign which incites controversy. Well, that's what she wanted, now she will have to deal with it. Twice today, she has posted suggestions that she wants this thread to go away. Well, only she can make that happen. And she knows how.

Dwight:

My own, and several other regular participants of this newsgroup, not to mention a handful of lurkers who communicate me regularly to let me know I'm right on track. In fact, one of them just posted here recently, and quite unexpectedly.

The fact that the FCC issued the callsign is totally irrelevant. The FCC is a governmental agency which is driven by a total commitment to political correctness and the need to keep it's ass out of drafts. If they would decline to issue a call sign such as Kim's, they could be sued for big bucks for any number of reasons, most likely the violation of her First Amendment rights. Therefore, it is not the FCC's onus to take responsibility for an objectionable call sign. That is the responsibility of the person to whom it was assigned, if a sequentially-assigned call, or the person requesting a specific Vanity Call Sign. If I were to request a new, sequentially-assigned call, and got something like K3KKK or K3FUK, I would immediately return that license to the FCC and demand a reassignment which did not contain that particularly objectionable suffix. If Kim had any class at all, that is precisely what she would do with her present call. This is on Kim, not the FCC. The FCC is not in a position to sanction or disapprove any particular call sign.

Well... I'm gonna try again. I posted this over 8 hours ago and it's not shown up on my server yet so my apologies if it turns up twice.

When they came out with incentive licensing, there was a vocal minority complaining. When they came out with the No code tech license there was a vocal minority complaining. Now they are doing away with most of the CW requirement and there is a vocal minority complaining.

WAyyyy back there used to be the class separation and then they did away with it to the point where the General class had full privileges. Then incentive licensing, then the new structure with code free techs on VHF, then they lowered the CW speed and now they are doing away with most of the CW requirements which are there due to international agreements.

"To me" it matters little whether they make the requirements tech heavy, procedure heavy, or require CW. It has little to do with the character of those coming into the service.

Each change has brought out the "gloom and doom" element proclaiming this will be the straw that broke the camel's back and the end of Amateur Radio.

Maybe in addition to the technology and procedure testing we should run a test on character traits? <:-)) If we had been doing such there would be a number of current hams who would have failed.

I have gone the whole route and yes, I passed 20 wpm to get my license, but I don't see that need be a requirement for future applicants.

It really doesn't matter how we test, there is always going to be a mix of character traits and groups who oppose the way each other operate. There will also be a small percent who will not be satisfied no mater what is done.

The move proposed by the League is consistent with international treaty and world policy.

> get my Tech no-code. So what? I think it's a great idea to get on HF!!

I heartily agree... read on.

If you ever had to struggle through the period
of no-voice novice, you might never wish that
particular chore on anyone. I got my first Novice
in '75, and let it lapse due primarily to the lack
of voice priviliges (and no manuals for the
boatanchors I'd been given). CB was just a lot
more fun.

I got my second novice in '89, man, what a
difference! Sunspots were coming on, 10M
was hopping, and I worked for a commercial
radio shop. That's what Ham Radio is all about,
for me.... not hazing, but graduated challenges.

The greatest concern, and one which I don't think
has been addressed in this thread yet, is the fact
that our spectrum is in danger. We need more
occupants to help occupy it... and HF voice
priviliges are the only carrot left to put on the stick.
This is a graying hobby.

>Oh, wait, you may find her vulgar also...
>
>Kim W5TIT

Kim:

Ms. Parton has a lot more going for her than an exceptionally well-rounded
figure. She has a very attractive face (once you get over the big, bleached
blonde hair and the stage makeup), an exceptionally engaging personality,
and she is an exceptionally talented and entertaining singer, songwriter,
and actress. And while her exceptionally large breasts may be, as she
herself once said, "bought and paid for," they are nevertheless all hers, and
she does make humorous, but always tastefully self-depricating, references
to them as part of her act. However, I tend to doubt that if she were an
amateur radio operator, that she would consider requesting a Vanity Call
sign such as "W4TIT."

Dolly Parton is the real thing -- beautiful, talented, and successful. Stop
comparing yourself to her until you write a song like "Jolene" and several
dozen others that are just as good.

Dwight:

Let's try a little experiment that would serve to prove what you just said. Sometime within the course of going about your daily duties, locate and approach an attractive woman with a particularly voluptious bustline. Say something like, "Hey, lady, I think you have a really nice set of tits there!" Do not duck, cut and run, hold a police riot shield over your face, or anything like that. Just stand there and take the consequences. Bring a witness, then report back on what happens, if and when you regain consciousness. (BTW, I don't recommend that you perform this experiment on a woman who is escorted by a particularly large male companion.)

Anyone care to speculate on what the outcome may be?

Kim:

You don't make an issue of your breasts? Then what is your call sign
all about? I clearly recall that you stated that since you consider yourself
to be particularly "well endowed," you took up some sort of challenge to
request that particular Vanity Call Sign for the purpose of creating interest
directed toward your breasts. Of course, I can understand your need to
create confusion over this issue, but an out-and-out lie like you made
above only serves to weaken your already thin credibility.

Mike who?!? :-)

QST's advertising "card" is on the League website and anyone who
has more time than they can spend on something useful can grab
an issue of QST and figure out the approximate income from QST
ads each month. That's enough to pay for the staff salaries of QST,
the paper-printing-binding costs, and some of the Fullfillment
services (list maintenance, distribution, delivery)

Since ARRL controls QST, they can get FREE advertising for
whatever else ARRL is publishing. They do. It's an all-around
money-winner since they don't pay much for submitted work by
others. Since ARRL arranges to OWN first rights to all articles in
QST, they can reprint that material in Handbooks or anything else
as much and as many times as they wish without giving a cent
more in compensation to authors. Fabulous setup for making a
bit of money for the League. They've got it sewn up tight. :-)

Note: Retail outlets for League publications make a small profit
on publishing sales, yet the price for each one is the same whether
one buys it in HRO or orders from Newington. The difference is
that anyone ordering from Newington has to ALSO pay shipping
charges! Double profits...no cost to them for shipping and they
make the retailer's discount difference for themselves! Lovely.

"Endowment funds?" I doubt there are many millionaires out
there bequeathing large sums to the League. Nowhere close to
Kroc endowments. It is a kind of crock, though.

[now watch all the ARRL syncophants come out, panting with rage
and vitriol for Telling It Like It Really Is...:-)]

OMYGAWD!!! "Begging for this thread to be dropped!"?????????? Larry,
puhleeze. You're not that stupid.

A) I do not defend my callsign: I like my callsign
B) No "arguments" needed for my callsign. It's mine. Period.
C) End of my rope?? Over a phucking callsign?

Now, I *DARE* you to keep this callsign going beyond your usual
"time-of-year" spin with it. But, just to let you know up front, the I have
no intention of changing my callsign and I don't think I could get any
more decent a human than I am. As to learning, I do that every day--thank
goodness. As to being intelligent, I think I speak too lofty for you now as
it is!

Gads, you're getting hilarious. Only thing is: we're packing to move so
this is the last I'll be on for a while!. I'll be back on sometime around
the first of March. Gonna have this thread still going, there, big fella?
If not, tell ya what, I'll drag it up again! ROFLMAO!!!

Nah, I'm neither a DXer nor a contester, Kim. I mostly like to ragchew. One of my Elmers taught me that "a QSL is the final courtesy of a QSO." I guess it kinda stuck with me.

Most of the folks I've QSO'd with have sent me their card direct and right away. W0EX's card actually arrived the same day I mailed his out.

There is one fellow R.R.A.Per who owes me a card tho...ahem. <hihi> ;-)

If 2) is done, then 1) happens automatically, because the only difference
is the code test.

>The Amateur Extra license would STILL require the Amateur Extra
>written exam but not the Morse Code exam.

So what you're really proposaing is to just dump the code test and
nothing else.

That's already been propososed to the FCC by at least two different groups.

>There is a pragmatic as
>well as philosophical reason to eliminate the Morse Code testing
>requirement: no more need to keep track of which Technicians (and new
>Generals) passed the 5 wpm exam and which ones did not. (Yes, this is
>essentially what No Code International proposes.)

It's exactly what NCI and NCVEC have proposed. And it doesn't save FCC
anything, because it's not FCC that has to keep track of who is a Tech Plus.

>3. Keep the current phone bands in place as an incentive to use and
>develop narrowband modes like CW, PSK-31, etc.

Agreed!

>4. If keeping Advanced licenses in the database is too much work,
>then give Advanced licensees a free upgrade to Amateur Extra.

Why? What work is involved in keeping them in the database? It's just a
computer system,

>5. Do NOT reduce Novice privileges. (The ARRL proposal reduces their
>allowed power output and eliminates their 23 cm privileges.)

Do you propose reopening Novice to new licensees?

How many Novices today will be adversely affected by the loss of 23 cm and the
slight power reduction?

>If
>keeping Novice licenses in the database is too much work for the FCC,
>then give all Novices a free upgrade to my proposed new Technician
>class (Tech Plus).

Why? What work is involved in keeping them in the database? It's just a
computer system,

>6. If the entry-level license has too few HF privileges, then expand
>HF privileges for the new Technician class rather than give all
>Technicians a free upgrade to General.

>5 wpm exam. I believe that the current license system is basically
>OK. I can't think of a system that would be that much better WITHOUT
>imposing substantial burdens on the FCC, ARRL, VEs, applicants, etc.
>
Here's the problem:

ARRL's BoD thinks that the license structure has two main problems:

1) Entry level license is too hard to get for raw beginners

2) Entry level license privileges are too focused on VHF/UHF and not enough HF

Their solution is to simplify the entry level exam and give it a more balanced
set of privileges. Personally I think they should include more HF bands, like
